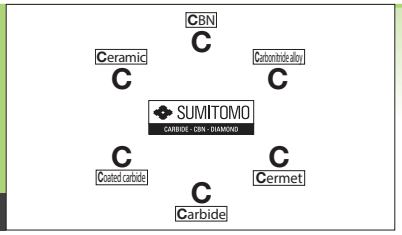
CONTENTS

A Grades
A1 to A37



- Grades for Turning
- Grades for Milling
- Grade Comparison Chart
- Turning Chipbreaker and Grade Selection Guide
  - For Steel Turning
  - Stainless Steel Turning
  - For Cast Iron Turning
  - For Exotic Alloy Turning
  - For Non-Ferrous Metal Turning
  - For Hardened Steel Turning
  - For Small Lathes
- Coating (CVD/PVD)
- Cermet
- Cemented Carbide
- CBN
- Polycrystalline Diamond
- Ceramics
- Material Properties

B Inserts
B1 to B135

- Indexable Insert Identification Table
- Grade Comparison Chart
  - Coating, Cermet
  - Cemented Carbide, Ceramics
  - CBN, Polycrystalline Diamond
- Chipbreaker Comparison Chart
- Chipbreaker Selection
- Negative Inserts
- Positive Inserts
- Ceramic Negative Inserts (With Hole/Without Hole)
- Ceramic Positive Inserts (Without Hole)
- Solid CBN
- Precautions when Using Wiper Inserts

C Toolholders
C1 to C63

- External Toolholder Series
- Toolholder Identification and Cutting Edge Position Dimension
- Negative Insert Applicable Holders
- Positive Insert Applicable Holders
- T-REX Tool Holders
- Tool Holders for Aluminum Wheel Turning
- Double Clamp Tool Holders

D Small Parts Machining
D1 to D30

- Small Lathe Selection
- General Features of Small Lathes
- Insert Grade Selection
- Chipbreaker Selection
- External Holders
  (Refer to Chapters E / F for Boring Bars / Grooving Tools / Cut-Off Tools)

E Boring Bars
E1 to E75

- Selection Guide for Boring Tools
- Boring Tools Identification Table
- Selection Guide for Boring Tools
- Boring Tools Series
- Multi-functional Small Lathe Tools
  Twin Head Holder
- For Bottom Facing
- For Profiling
- For Through Boring
- For Shoulder Milling
- For Very Small Diameter / Small Diameter Turning

F Grooving / Cut-off Threading
F1 to F76

- Grooving Tool Series Selection Guide
- Grooving Tools
  - Triangular Type Insert for Shallow Grooves (External/Internal)
  - For External/Internal and Facing
  - For Hardened Steel
- Cut-off Toolholder Series Selection Guide
- Cut-Off Tools
  - SumiGrip Jr. / SumiGrip
  - Small Diameter Cut-Off Tool Holders
- Threading Tool Series Selection Guide
- Basics of Threading
- Threading Tools
  - SSTE Type / SSTI Type
  - For External/Internal Diameters

G Tooling Systems / Polygon Shank / Cartridges
G1 to G24

- General Features of Tooling Systems
- ICTM HSK Tooling Systems
- Polygonal Taper Shank SumiPolygon
- Modular Taper Shank Supported by 2 Faces
- HSK Tooling Systems Supported by 2 Faces
- Smart Damper
- IGETALLOY ABS System
- Micro Units
- Cartridge Units
- Boring Quills / Carbide Line Boring Bars

- Milling Cutter Selection Guide
- Grades for Milling
- Cutter Identification Table
- Insert Catalog No. Nominal
- Face Milling
- Shoulder Milling
- High Feed Milling
- Multi-purpose (WMM)
- Radius Milling
- R/3D Profiling
- Groove / T-Slot
- Chamfering
- Non-ferrous Metal Milling
- High-speed Cast Iron Milling
- Modular Tools
- Special Purpose Cutters
  - Goalmill Series
- Discontinued Milling Cutters

H Milling Cutters / Modular Tools — H1 to H243

- Selection Guide
- Cutting Edge Length List by Diameter
- Endmill Coating Grades
- Square / Radius Endmills (Coated)
- Ballnose Endmills (Coated)
- AURORA Coat Endmills
- SUMIDIA Coated Endmills
- Non-ferrous Metal Milling
- Milling of Exotic Alloys
- Milling of CFRP
- Cemented Carbide and Hard Brittle Material
- Binderless PCD Endmills
- CBN Endmills for Hardened Steel
- PCD Endmills for Non-Ferrous Metals

I Endmills — I1 to I122

- Drill Selection Guide
- Application Range of Major Drills
- Drill Coating
- General-purpose
- For Spot Facing
- For Deep Hole Drilling
- For Extra Small Hole Drilling
- For Deep Drilling/Pocketing
- For Medium to Large
- Diameter Drilling
- For Non-ferrous Metal Milling
- For Drilling of Heat-Resistant Alloys
- For Milling of CFRP
- For Drilling of Thin Sheets
- Indexable Insert/Head Type
- Reamers
- HSS

J Drills Reamers — J1 to J148

- Carbide Material Features and Applications
  - Plate Blanks
  - Rod Blanks
  - Special Rod Blanks
- JIS Type Inserts for Carbide Tool Holders
- JIS Type Carbide Tool Holders
- Jig Boring Tools IJB Type

K Carbide Materials — K1 to K12

- CBN - SUMIBORON Series
- Coated CBN - SUMIBORON Series
- Guidance for CBN - SUMIBORON Grades
  - Hardened Steel Cutting
  - Cast Iron Cutting
  - Sintered Component Machining
  - Machining of Rolls / Hard Facing Alloys / Heat-Resistant Alloys
  - Titanium Alloy Cutting
- Inserts
  - CBN - SUMIBORON Insert Series
  - Stock Table for CBN - SUMIBORON Indexable Inserts
- Holders
  - CBN - SUMIBORON Toolholder Series
- Cutters / Endmills
  - CBN - SUMIBORON Mill Series
  - CBN - SUMIBORON Endmill Series

L CBN - SUMIBORON — L1 to L132

- PCD - SUMIDIA Series
- SUMIDIA Binderless Series
- Inserts
  - SUMIDIA Insert Identification Table
  - Stock Table for SUMIDIA Indexable Inserts
  - Stock Table for SUMIDIA Binderless Indexable Inserts
- Holders
  - SUMIDIA Tool Holder Series
- Cutters / Endmills
  - SUMIDIA Cutter Series
  - SUMIDIA Endmills
- Drills
  - SUMIDIA Drills
- SUMICRYSTAL

M PCD - SUMIDIA / Binderless PCD / SUMICRYSTAL — M1 to M36

- Spare Parts
  - Screws, Eccentric Pins, and Lever Pins
  - Shims, Clamps, Rings and Pins
  - Drawing Pins, Nuts, and Wrenches
- Technical Guidance
  - Turning Edition
  - Milling Edition
  - Endmilling Edition
  - Drilling Edition
  - SUMIBORON Edition
- References
  - SI Unit Conversion List
  - Metals Symbols Chart (Excerpt)
  - Steel and Non-Ferrous Metal Symbols Chart (Excerpt)
  - Hardness Scale Comparison Chart
  - Standard of Tapers
  - Fitting Tolerances

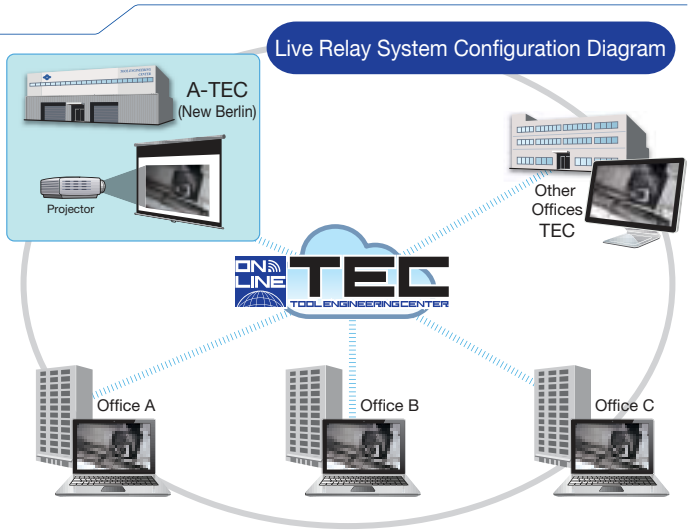
International Offices	▶European Design & Engineering Center (E-DEC) / Germany ▶Thailand Tool Engineering Center (Ti-TEC) / Thailand ▶Indonesian Tool Engineering Center (In-TEC) / Indonesia ▶China Tool Engineering Center (C-TEC) / China ▶Motherson Tool Engineering Center (M-TEC) / India

Online TEC

Live Relay Example (1) (Lecture)

Live Relay Example (2)
(Technical Consultation)

Live Relay System Configuration Diagram



Live relays in which cutting videos can be viewed from remote locations in real time with two-way communication are possible. When time or distance makes a visit to a Tool Engineering Center difficult, customers can view live relays at their own sites and receive evaluations as requested.

Seminars

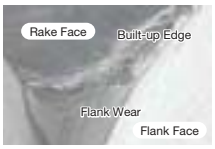
Test Cutting

We have a range of machine tools and measurement instruments available to conduct various test cutting in order to support the requirements of our various customers.

■ Machining Failure Examples

Non-smooth Machined Surface

Tool Breakage



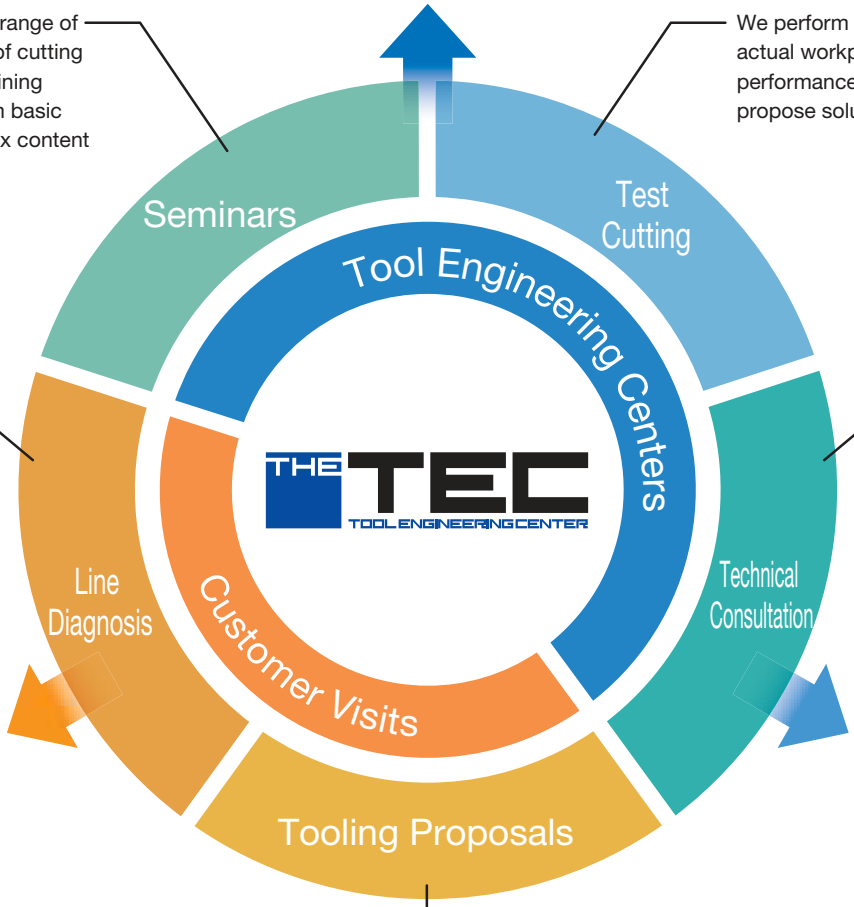
Tool Wear and Cutting Edge Structure

Unsatisfactory Chip Control

Supporting the Development of Knowledge and Technology

Acquire a wide-range of understanding of cutting tools and machining technology from basic through complex content

We perform test cutting on customers' actual workpieces and use the latest performance evaluation technology to propose solutions



Support of machining improvement activities through investigation of the current machining lines, proposals for improvements and test cutting

Troubleshooting and technology proposals based on the latest tool information and machining databases

We also can help solve problems by visiting your production site

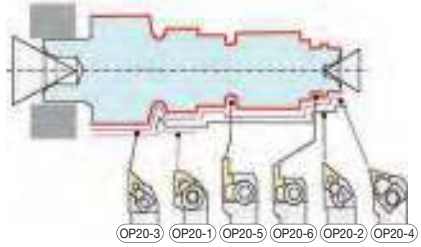
Proposing solutions to your problems

Proposals for solutions to potential problems, estimating tool life for tooling and tool selections for newly established production lines

Line Diagnosis

Technical consultation and line diagnosis are performed in order to propose the ideal solutions to our customers.

Tooling Proposals



We propose optimal tools, cutting conditions, estimated tool life and machining times.

Technical Consultation

Improvements are proposed based on investigation of various tool damage and machining databases.

Contact your local sales office for details.

Dimension symbols are compliant with ISO13399

The following table shows ISO13399-compliant dimension symbols. Content corresponding to the sample symbols/notations are shown below. Tool shape diagrams and stock charts use the symbols and notation examples from the table below. Please contact Sumitomo Engineering Dept. for more details regarding ISO13399.

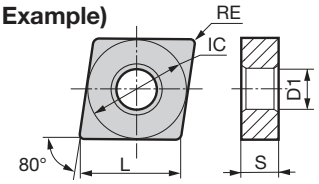
(1) Inserts (For Turning / For Milling)

Symbol	Notation Example	Description
AN	Main Blade Relief Angle	Clearance angle major
APMX	Undercut Depth, Maximum Depth of Cut	Depth of cut maximum
BS	Wiper	Wiper edge length
CDX	Machining Groove Depth, Depth of Cut	Cutting depth maximum
CHW	Chamfering	Corner chamfer width
CW	Width of Cut	Cutting width
D1	Bore Dia.	Fixing hole diameter
DMIN	Min. Bore Dia.	Minimum bore diameter
IC	Inscribed Circle	Inscribed circle diameter
INSL	Length	Insert length
L	Cutting Edge Length, Overall Length, Length	Cutting edge length
PDX	X Direction	Profile distance ex
PDY	Y Direction	Profile distance ey
PNA	Thread Ridge, Thread Ridge Angle	Profile included angle
RE	Nose Radius	Corner radius
RER	Nose Radius	Right side corner radius
REL	Nose Radius	Left side corner radius
S	Thickness	Insert thickness
W1	Height, Width	Insert width
WF	Cutting Edge, Cutting Edge Distance	Functional width

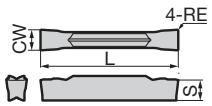
(2) Tool Holders For Turning

Symbol	Notation Example	Description
APMX	Undercut Depth	Depth of cut maximum
B	Width	Shank width
BD	Body Dia., Cutting Edge	Body diameter
CDX	Machining Groove Depth, Depth of Cut	Cutting depth maximum
CRKS	Screw	Connection retention knob thread size
DC	Work Dia.	Cutting diameter
DCB	Shank Dia.	Connection bore diameter
DCON	Dia., Mounting Dia.	Connection diameter
DCSFMS	Mounting	Contact surface diameter machine side
DMIN	Min. Bore Dia.	Minimum bore diameter
DMM	Shank Dia.	Shank diameter
DN	Neck Diameter	Neck diameter
GAMF	Rake Angle	Rake angle radial
GAMP	Rake Angle	Rake angle axial
H	Height	Shank height
HBH	Offset, Step	Head bottom offset height
HBKL	Head	Head back offset length
HBKW	Step	Head back offset width
HBL	Offset, Bottom Offset	Head bottom offset length
HF	Cutting Edge Height	Functional height
KDP	Groove Depth	Groove depth
KWW	Groove Width	Keyway width
LF	Overall Length, Overhang	Functional length
LH	Head, Head Length	Head length
LHD	Head	Head lengh
LS	Shank Length	Shank length
LSCX	Clamping Length, Cutting Edge	Clamping length maximum
LU	Usable Length	Usable length
LUX	Effective Overhang	Usable length maximum
WF	Cutting Edge, Cutting Edge Distance	Functional width

(Turning Insert Example)



(Grooving Insert Example)



(External Holder Example)

Fig 1

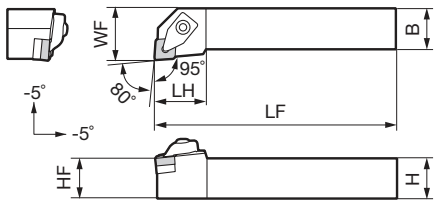


Figure shows right-hand (R) tool.

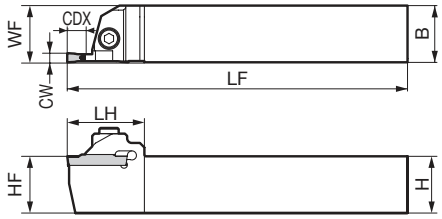
(Grooving Tool Holder Example)



*1 The symbols in the above table are compliant with ISO13399 and do not include symbols unique to our company.
*2 As symbols under review are not included, these may change over time.

(3) Cutters / Indexable Endmills

Symbol	Notation Example	Description
APMX	Max. Depth of Cut	Depth Of Cut Maximum
BD	O.D.	Body Diameter
BDX	Max. O.D.	Body Diameter Maximum
CBDP	Mounting Depth	Connection Bore Depth
CRKS	Screw	Connection Retention Knob Thread Size
CW	Width	Cutting Width
DBC	Hole Position	Connection Bore Diameter
DC	Dia., Cutter Dia.	Cutting Diameter
DCB	Bore Dia.	Connection Bore Diameter
DCON	Mounting Dia.	Connection Diameter
DCSFMS	Boss	Contact Surface Diameter Machine Side
DCX	Max. Dia., Cutter Dia.	Cutting Diameter Maximum
DMM	Shank	Shank Diameter
DN	Diameter	Neck Diameter
H	Width	Shank Height
KDP	Keyway Depth	Groove Depth
KWW	Keyway Width	Keyway Width
LBX	Length	Body Length Maximum
LF	Height	Functional Length
	Overall Length	Functional Length
	Effective Length, Overhang	Functional Length
LH	Head	Head Length
LS	Shank	Shank Length
LU	Length	Usable Length
OAL	Overall Length	Overall Length
RMPX	Maximum Ramping Angle	Maximum Ramping Angle
SNT	Key Groove Width	Keyway Width
THUB	Thickness	Hub Thickness

(4) Endmills

Symbol	Notation Example	Description
APMX	Cutting Edge Length	Depth Of Cut Maximum
CHW	Chamfering	Corner Chamfer Width
DC	Dia.	Cutting Diameter
DMM	Shank Dia.	Shank Diameter
DN	Head Dia.	Neck Diameter
LF	Overall Length	Functional Length
LFS	Neck Length	Functional Length Secondary
LU	Neck Length	Usable Length
RE	Radius	Corner Radius

(5) Drills / Reamers

Symbol	Notation Example	Description
BD	Diameter	Body Diameter
BDX	Diameter	Body Diameter Maximum
CW	Machining Width	Cutting Width
DC	Dia.	Cutting Diameter
DCB	Shank Dia., Bore Dia.	Connection Bore Diameter
DCON	Shank Dia.	Connection Diameter
DCSFMS	Flange Dia., Boss	Contact Surface Diameter Machine Side
DF	Diameter	Flange Diameter
DMM	Shank Dia.	Shank Diameter
LBX	Body	Body Length Maximum
LCF	Flute Length	Length Chip Flute
LF	Shoulder Length, Length	Functional Length
LFA	Bolt	A Dimension On Lf
LFS	Length	Functional Length Secondary
LH	Neck Length	Head Length
LPR	Overhang Length	Protruding Length
LS	Shank	Shank Length
LU	Effective Length	Usable Length
LUX	Neck Length	Usable Length Maximum
OAL	Overall Length	Overall Length
PL	Tip	Point Length
WBTHK	Web Thickness	Web Thickness

Notice

Thank you for using the Sumitomo Electric Carbide, Inc, Cutting Tool General Catalog

- This catalog presents the major items in the Sumitomo Cutting Tools product line.
  The catalog is organized as follows:
  (1) Cutting Tool Grade
  (2) Cutting Tool Products (Carbide)
  (3) CBN - SUMIBORON / PCD -SUMIDIA Products

  • Ask for our individual product brochures with most current product information or visit www.sumicarbide.com to download digital versions.

- This catalog is current as of July 2020.

- As a result of our ongoing research, products may reflect enhancements in quality, performance, and specifications not listed in this catalog. Please take note of this.

- To order CBN - SUMIBORON / PCD - SUMIDIA products, contact your nearest Sumitomo Electric Carbide, Inc. Sales Representative or distributor. For inquiries or other requests, feel free to contact your nearest sales office.

Stock Symbols

- The following symbols indicate whether products are in stock.

Stock Symbols	●: Standard stocked item ★: Worldwide Warehouse Item ▲: Limited Avaibility Item, made to order, or discontinued (please confirm stock availability).	Blank: Made-to-order item — mark: Not available

Meaning of Icons

Common New : New item to Sumitomo Electric Carbide, Inc.

Grade
ISO classification of work material:

Holders

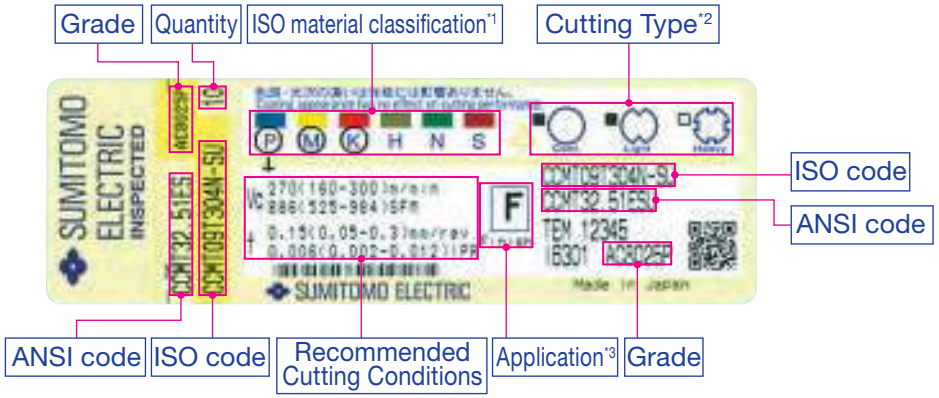
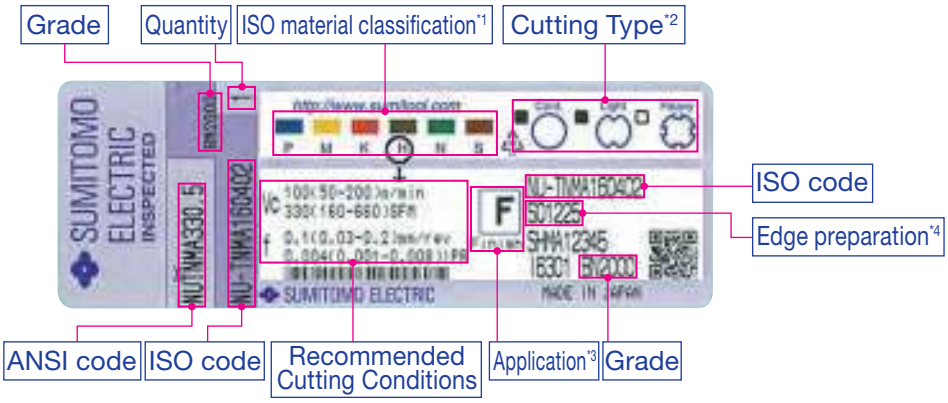
Examples of Insert Labeling

Carbide / Cermet Inserts



CBN - SUMIBORON / PCD - SUMIDIA Inserts



***1 ISO material classification**

- P Steel
- M Stainless Steel
- K Cast Iron
- H Hardened Steel
- N Non-ferrous Metal
- S Exotic Alloy

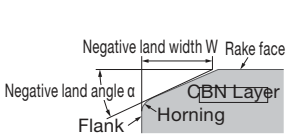
***2 Cutting Type**

- Cont. Continuous
- Light General
- Heavy Interrupted

***3 Application**

- **F** Finishing
- **M** Medium cutting
- **R** Rough cutting

***4 Edge preparation (CBN - SUMIBORON)**



S 0 1 2 2 5

- Negative land angle
- Negative land width
- Edge shape T: Negative land, S: Negative land + honing

Eg: S01225
→Negative land 25°/0.12 mm width, honed

Product Package Change for Indexable Insert Cutters

Please see below specifications of our indexable milling cutter product package and wrench have changed.

■ Change Details

- The cutter case has changed from a paper-based box to a PP (plastic) case.
- The applicable wrench has been changed from an integrated type (1 piece) to an attachable/detachable version.

■ Products with Changed Package and Wrench

<Applicable Products> Cutter Diameter ø1.25 to 5.00" / ø32 to 125mm Shell Type Cutters

*Note that RF Type, WAX Type, DNH12125R, DNHB12125R, and BBT-SB integrated type HFFH cutters are not applicable.
*For some time, there may be a mixture of new and old package types on the market.

■ Wrench Cat. No. Details

*Either Cat. No. can be used if purchasing the wrench separately.

	Before change	After change	
	Integrated Wrench	Bit	Handle Grip
Cat. No.	TRDR10IP	TRB10IP	HPS1015
	TRDR15IP	TRB15IP	
	TRDR20IP	TRB20IP	HPL2025
	TRDR25IP	TRB25IP	

SUMITOMO

CARBIDE - CBN - DIAMOND

Success from Sumitomo's Craftsmenship and Engineering Passion.

Every Sumitomo product contains our craftsmen's passion. The "Manufacturing DNA" of our cutting tools demonstrate our heart & soul.

The result of our relentless passion is continuously strengthening our worldwide manufacturing.

Followed by a dedication to recycling program and comany-wide Corporate Social Responibility.

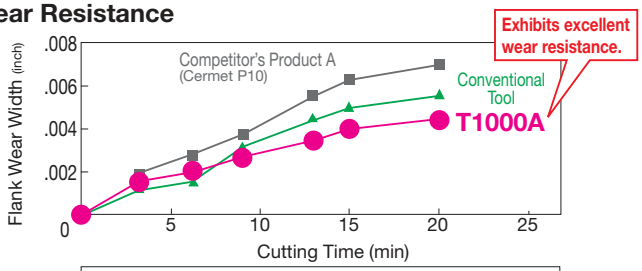
Grades T1000A / T1500A / T1500Z / T2500Z

T1000A : High-hardness cermet with outstanding wear resistance and toughness. Creates high dimensional accuracy for continuous steel machining or finishing of powdered metal or cast iron.
T1500A : A general-purpose cermet made from hard grains with different grain sizes, delivering functionality that provides an excellent balance of wear resistance and toughness, along with good surface finish quality.
T1500Z : Incorporates Brilliant Coat® PVD coating with excellent lubricity to provide better wear resistance and consistent surface finishes in low-speed cutting applications such as machining of small products or low carbon steel.
T2500Z : Features Brilliant Coat® PVD coating along with optimized substrate for doubling breakage resistance in moderate to interrupted cutting applications.

Performance

T1000A

• Wear Resistance



Part Material: 4135 Insert: CNMG432ESU
Cutting Conditions: v_c=1,050 SFM, f=0.008 IPR a_p=.060", Dry

Grades

ABSOTECH ABSOTECH ABSOTECH ABSOTECH
New AC8015P / AC8025P / New AC8035P / AC1030U

Covers a wide range of machining applications from high-speed to interrupted cutting and small lathes

AC8015P : Development of crater damage is suppressed by controlling the orientation of the alumina crystal grains. Achieves long, stable tool life during high-speed and high feed cutting.

AC8025P : Our 1st recommended grade for turning steel. Surface smoothing technology significantly suppresses adhesion of work material components. Achieves long, stable tool life with various cutting speeds and work materials.

AC8035P : Tensile stress removal of the coating layer greatly improves fracture resistance. Achieves long, stable tool life during heavy interrupted cutting.

AC1030U : Employs a new PVD coating, and a dedicated tough carbide substrate. High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

Performance

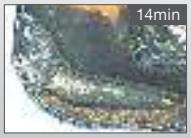
AC8015P

● Alumina crystal grain orientation control technology suppresses crater damage due to chip abrasion

Conventional Tool

Crystal orientation not aligned

TiCN layer exposed

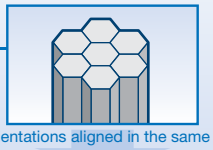


Tool life

Crater damage progression due to peeling of alumina layer

Workpiece Material: SUJ2 (O.D. Continuous) Insert: CNMG432EGU
Cutting Conditions: v_c=985 SFM, f=0.012 IPR, a_p=060", Wet

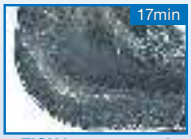
AC8015P



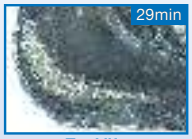
Crystal orientations aligned in the same direction

Significantly suppresses alumina layer damage

Minor Wear



TiCN layer exposed



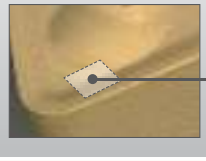
Tool life

Suppresses crater damage due to chip abrasion → Twice the crater wear resistance

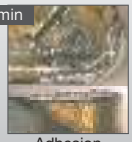
AC8025P

● Surface smoothing treatment significantly suppresses adhesion and chipping

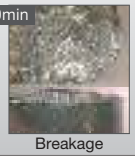
Conventional Tool



Ra 0.4μm



Adhesion

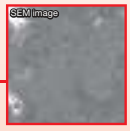


Breakage

Unable to Continue

Workpiece Material: SCM415 (Face) Insert: CNMG432EGU
Cutting Conditions: v_c=330-985 SFM, f=0.012 IPR, a_p=060", Wet

AC8025P



Ra 0.04μm

Normal Wear

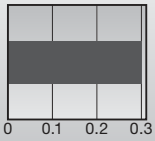
Minor Damage Only, Able to Continue

Suppresses adhesion with ultra-smooth surface → At least twice the adhesion/fracture resistance

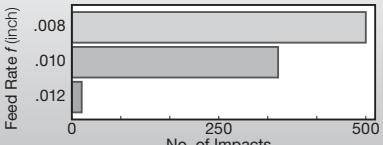
AC8035P

● Special surface treatment reduces tensile stress in the coating layer, significantly suppressing breakages

Conventional Tool



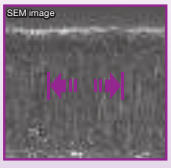
Tensile stress in coating (GPa)

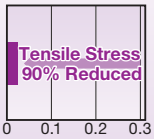


Unable to Continue

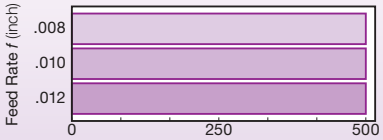
Workpiece Material: SCM435 (O.D. Interrupted) Insert: CNMG120408N-GU
Cutting Conditions: v_c=525 SFM, f=0.008-0.012 IPR, a_p=080", Dry

AC8035P





Tensile stress in coating (GPa)



All Corners Able to Continue

Suppresses crack growth and breakages by reducing tensile residual stress → At least twice the fracture resistance

Stainless Steel M

Grades

ABSOTECH AC6020M / ABSOTECH AC6030M / ABSOTECH AC6040M / ABSOTECH AC1030U

AC6020M : Combines a high-hardness carbide substrate with excellent wear resistance and a new CVD coating with improved coating strength to achieve both excellent wear resistance and fracture resistance. Achieves long, stable tool life during high-speed cutting.

AC6030M : Our 1st recommended grade for turning of stainless steel, achieving long and stable machining. Drastically reduces the abnormal damage common in stainless steel machining, thanks to the improved coating strength and excellent adhesion.

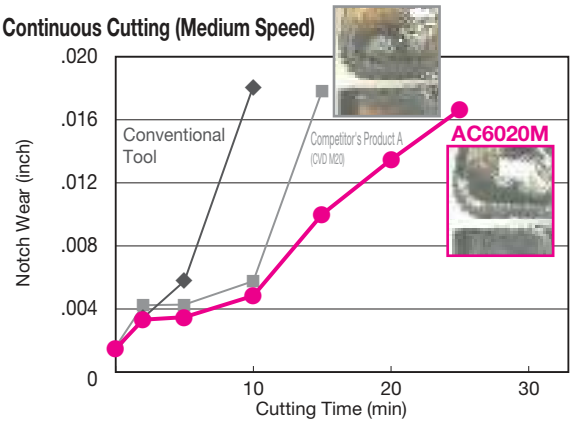
AC6040M : Drastically improves reliability in the unstable cutting range, thanks to the excellent adhesion and peel-off resistance of the new PVD coating as well as the improved fracture resistance of the dedicated carbide substrate.

AC1030U : High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

Performance

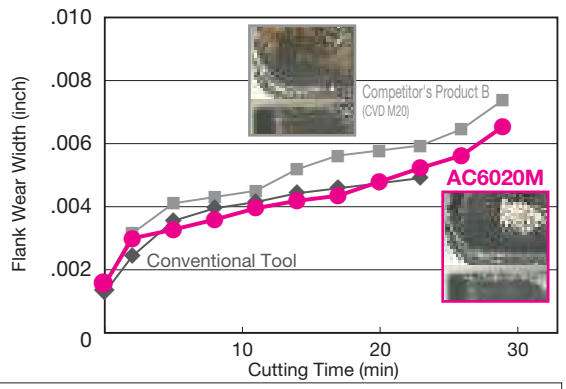
AC6020M

● Continuous Cutting (Medium Speed)



Workpiece Material: 316L Insert: CNMG432EGU
Cutting Conditions: v_c=490 SFM, f=0.012 IPR, a_p=.080", Wet

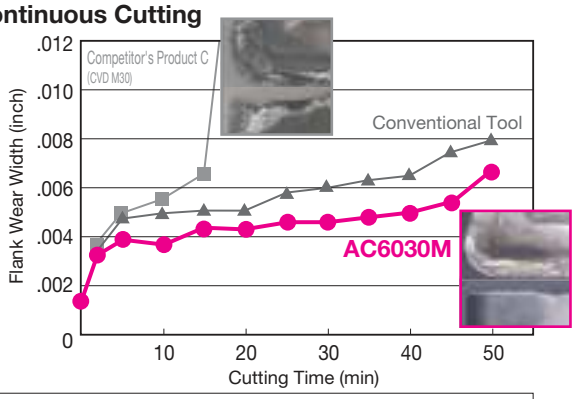
● Continuous Cutting (High Speed)



Workpiece Material: 316L Insert: CNMG432EGU
Cutting Conditions: v_c=656 SFM, f=0.012 IPR, a_p=.080", Wet

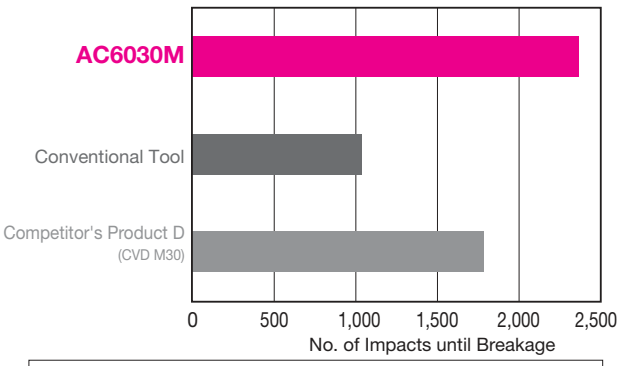
AC6030M

● Continuous Cutting



Workpiece Material: 316 Insert: CNMG432EEX
Cutting Conditions: v_c=656 SFM, f=0.008 IPR, a_p=.080", Wet

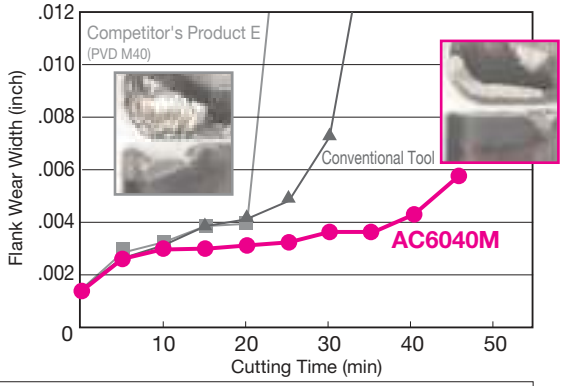
● Interrupted Cutting



Workpiece Material: 316 Insert: CNMG432EGU
Cutting Conditions: v_c=330 SFM, f=.004 IPR, a_p=0.04", Wet

AC6040M

● Continuous Cutting



Workpiece Material: 316 Insert: CNMG432EGU
Cutting Conditions: v_c=490 SFM, f=.008 IPR, a_p=.080", Wet

Grades

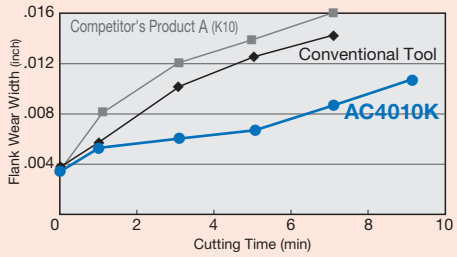
ABSOTECH
New AC4010K / New AC4015K / AC420K

AC4010K : Our 1st recommended grade for machining gray cast iron.
Adopts an ultra-thick new CVD coating to realise ultra-high-speed machining at V_C = 2,300 SFM.
AC4015K : Our 1st recommended grade for ductile cast iron.
New high-adhesion, high-strength CVD coating realises both wear resistance and chipping resistance.
AC420K : Superior fracture resistance, providing excellent stability in interrupted unstable cutting and when cutting mill-scaled work.

Performance

AC4010K/AC4015K Wear Resistance

• Gray Cast Iron



Workpiece Material: FC250 Continuous Insert: CNMG432EGZ

Grades

ABSOTECH
New AC5015S / New ABSOTECH AC5025S / EH510 / EH520

- New PVD coated grade with excellent wear and thermal resistance

AC5015S : Our 1st recommended grade for turning exotic alloys as it realizes stable tool life with high-speed, high-efficiency machining.

AC5025S : High-toughness grade for realizing stable tool life for interrupted cutting machining or mill-scaled work.

- Dedicated carbide grades with excellent thermal, wear and fracture resistance for machining titanium alloys

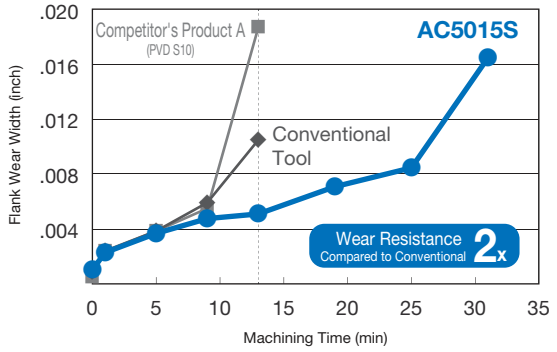
EH510 : General-purpose grade for titanium machining that features excellent wear and thermal resistance. For applications from roughing to finishing.

EH520 : Tough grade for titanium machining with excellent fracture and thermal resistance. Perfect for interrupted cutting and mill-scaled work.

Performance

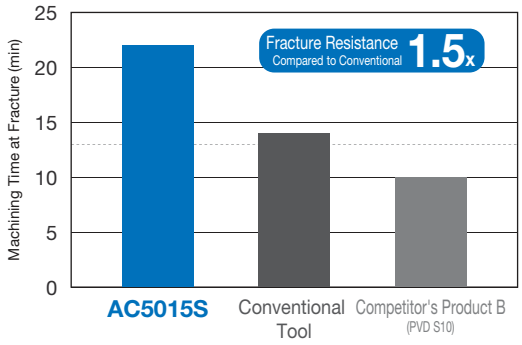
AC5015S

● Wear Resistance



Workpiece Material: Inconel 718 (44HRC)
Insert: CNMG432EEX
Cutting Conditions: v_c=130 SFM, f=0.004 IPR, a_p=.060", Wet

● Fracture Resistance



Workpiece Material: Hastelloy (22HRC)
Insert: CNMG432EEX
Cutting Conditions: v_c=165 SFM, f=0.004 IPR, a_p=.060", Wet

AC5025S

BNC2010 / BNC2020 / BN1000 / BN2000

BNC2010 / BNC2020

BNC2010 : For high-precision finishing requiring good surface roughness and dimensional tolerance.
Maintains excellent surface roughness thanks to coating with high boundary wear resistance and CBN substrate.

BNC2020 : General-purpose grade suitable for typical hardened steel machining applications.
Achieves long tool life thanks to highly wear-resistant, highly adhesive coating and tough CBN substrate.

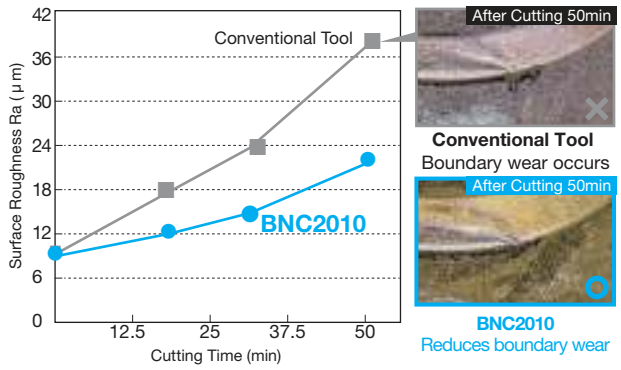
BN1000 : For high-speed machining, BN1000 provides the highest wear resistance of all uncoated SUMIBORON grades, improving fracture resistance while maintaining an emphasis on wear resistance.

BN2000 : General-purpose grade for general hardened steel machining with a high degree of fracture and wear resistance.

Performance

BNC2010

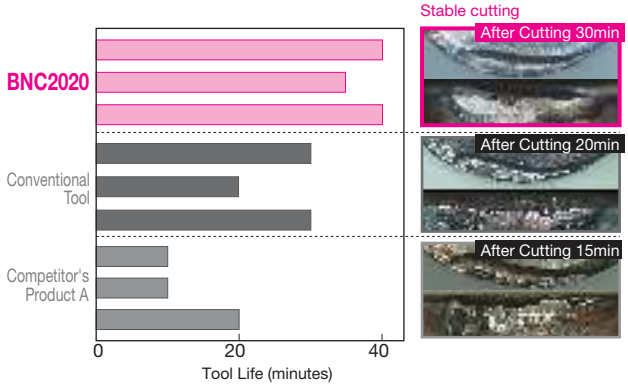
● Continuous Cutting of Hardened Steel



Workpiece Material: SCM415 58-62HRC (Continuous)
Insert: 4NC-DNGA432 Cutting Edge Treatment: S01225
Cutting Conditions: v_c=525 SFM, f=0.003 IPR, a_p=0.004", Wet

BNC2020

● Interrupted Cutting of Hardened Steel



Workpiece Material: SCM415-5V 58-62HRC (Interrupted Cutting)
Insert: 4NC-CNGA432 Cutting Edge Treatment: S01225

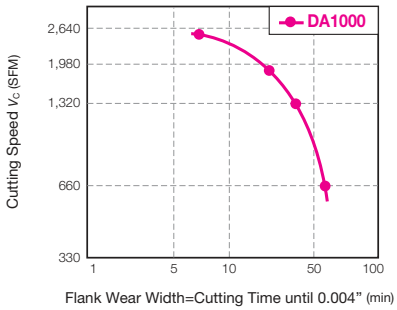
	Carbide	**H1**	.012 - .200	.004 - .020	up to 3,300

Grade DA1000

- Ultra-high-density sintered ultra-fine grain diamond
- Significantly improved surface roughness on machined surfaces
- World's highest-level wear resistance and strength
- Suitable for use with diverse aluminum and non-ferrous alloys

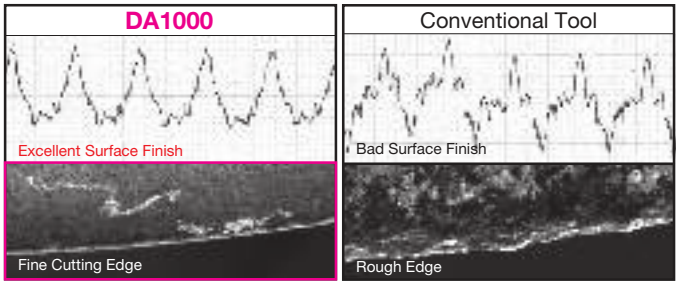
Performance

● Wear Resistance



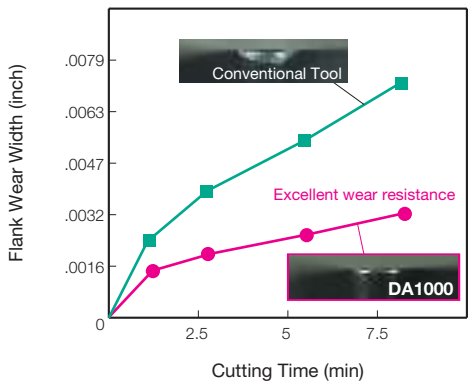
Workpiece Material: 17% Si-Al Alloy
Insert: TPGN321
Cutting Conditions: v_c=656 to 2,624 SFM, f=0.005 IPR, a_p=0.020", Wet

● Cutting Edge Surface Roughness Comparison



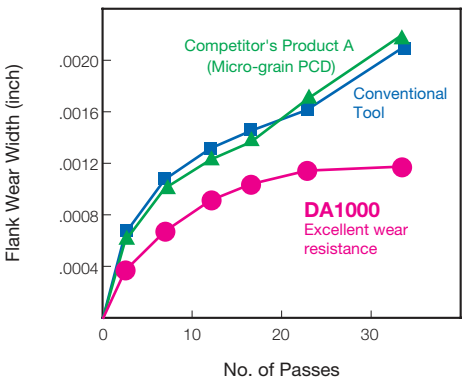
Workpiece Material: 17% Si-Al Alloy
Insert: TPGA321
Cutting Conditions: v_c=3,280 SFM, f=0.006 IPR, a_p=0.008", Wet

● Wear Resistance in Turning Applications



Workpiece Material: 17% Si-Al Alloy
Insert: TPGN321
Cutting Conditions: v_c=2,620 SFM, f=0.005 IPR, a_p=0.020", Wet

● Wear Resistance in Milling Applications



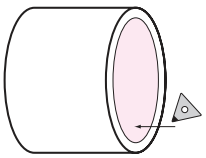
Workpiece Material: ADC12 (12% Si-Al Alloy)
Insert: NF-SNEW1204ADFR
Cutting Conditions: v_c=6,560 SFM, f=0.006 IPR, a_p=.120", Wet

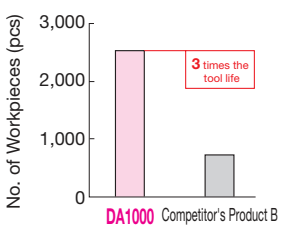
Application Examples

DA1000

[Copper Alloy Bushing]

Stable surface roughness with no cutting edge breakage (3.2S).
Tool life improved to 3 times that of conventional models.



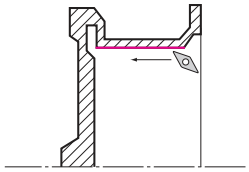


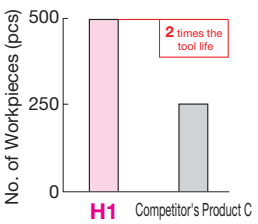
Insert: NF-TPGN322
Cutting Conditions: v_c=984 SFM f=0.0028 IPR, a_p=0.003", Wet

H1

[ADC12 Aluminum Wheel]

Excellent adhesion resistance.
Longer tool life.





Insert: VCGT332NAG
Cutting Conditions: v_c=7,216 SFM, f=0.010 IPR, a_p=.080", Wet

For Small Lathes

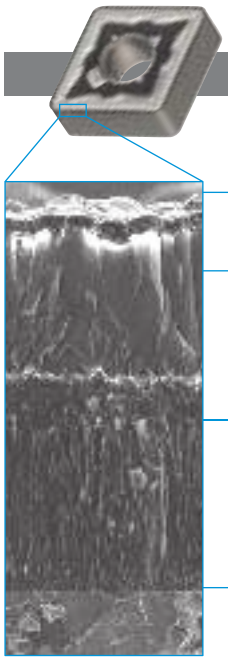
Coated Carbide

Sumitomo's Coating Series combines a proprietary tough cemented carbide substrate with a multi-layered coating for use in high-speed, high-efficiency applications on a wide range of workpiece materials including steel, cast iron and exotic alloys.

Features

ABSOTECH® : New coating technology that realizes absolute stability

CVD



Special Surface Treatment: Chipping resistance and adhesion resistance are significantly improved by special surface treatments applied to suit the application

High Strength Alumina Layer: Significantly improves the coating strength by controlling crystal growth direction

High Hardness Micro-Grain TiCN Layer: Significantly improves the coating hardness by using a fine and uniform crystal structure

High Adhesion Technology: Significantly improves adhesion strength through a smooth interface between the coating and carbide substrate

- Suppresses abnormal damage such as chipping and adhesion. Stable machining is achieved in various situations.
- Next-level high strength and high hardness coating is achieved. Achieves long, stable tool life even in high-efficiency machining.

■ Applicable Grades:

(For Steel Turning)	AC8015P, AC8025P, AC8035P
(For Stainless Steel Turning)	AC6020M, AC6030M
(For Cast Iron Turning)	AC4010K, AC4015K
(For Milling)	ACP2000, ACK2000

PVD

Our proprietary super multi-layered coating structure: Advanced nanotechnology enables nanometre-level thickness (1 nanometre is one billionth of a metre) Hardness, thermal resistance and toughness are significantly improved by alternately layering one thousand layers of super thin films

Cross Section of Cutting Edge Coating TEM Structure

High Adhesion Technology: Significantly improves adhesion strength through advanced control technology at the interface of the coating and carbide substrate

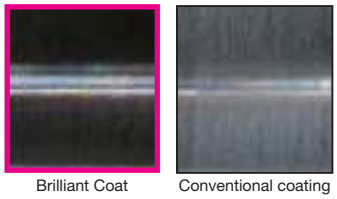
- Optimised coating composition according to application. Achieves stable machining regardless of the work material.
- Significantly improves chipping resistance by improving coating adhesion strength. Stable machining is realised even under high load conditions.

■ Applicable Grades:

(For Stainless Steel Turning)	AC6040M
(For Exotic Alloy Turning)	AC5015S, AC5025S
(For Small Lathes)	AC1030U
(For Milling)	ACU2500, ACP3000, ACK3000

Brilliant Coat® PVD

Brilliant Coat provides excellent lubricity for higher quality machining



Workpiece Material: STKM13A
Insert: CNMG432ELU
Cutting Conditions: v_c=330 SFM
f=0.006 IPR
a_p=.040", Wet

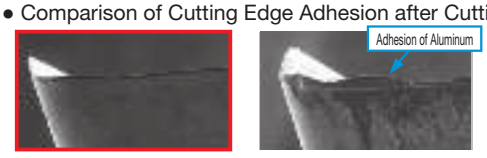
- PVD coating with excellent wear resistance and lubricity
- Suppresses reactions with work material and realises beautiful machined surfaces

■ Applicable Grade: (For Steel Turning) T1500Z

AURORA Coat (DLC: **D**iamond **L**ike **C**arbon) PVD

Using our proprietary PVD process technology, we have developed a hydrogen-free DLC coating that is extremely hard, flat and smooth.

- Comparison of Cutting Edge Adhesion after Cutting ADC12



AURORA Coat　　Uncoated Carbide

Workpiece Material: ADC12
Cutting Conditions: v_c= 1,000 SFM
f_z = 0.006 IPT
a_p= .200"
a_e= .200", Dry

- Second only to diamond in terms of hardness, this flat and smooth coating has a low coefficient of friction and provides excellent adhesion resistance to deliver better machined surface quality
- Can be used for high-speed, high-efficiency cutting of aluminum alloys, copper alloys, resins and more

■ Applicable Grades:

(For Milling)	DL1000, DL2000
(For Endmilling)	DL1000, DL1200
(For Drilling)	DL1300, DL1500

Cermet

Various grades and expanded range of inserts meet a wide range of finishing needs.

Lineup includes wear-resistant T1000A, general-purpose T1500A, general-purpose coated cermet T1500Z, T2500Z and tough T2500A grades.
Expanded lineup for a wide variety of finishing applications.

Features

Uncoated

T1000A

High-hardness grade with superior wear resistance

- Improved wear and fracture resistance
- Solid solution hard phase reduces reaction with steel
- Perfect for high-speed continuous finishing of steel, cast iron, and powdered metal

Uncoated

T1500A

A general-purpose grade that provides both wear and fracture resistance with higher-quality surface finishes

- Mixing hard phases of different functionality grain size and composition improves balance of wear and fracture resistance.
- Improved cutting edge treatment technology provides beautiful finished machined surfaces.

Uncoated

T2500A

Tough grade with excellent fracture resistance and thermal crack resistance

- Fine, uniform grain structure greatly improves toughness
- Improves thermal crack resistance due to the high thermal conductivity and realises stable, long tool life

Coated

T1500Z & T2500Z

General-purpose coated grade that employs our proprietary Brilliant Coat* PVD coating with excellent lubricity

- Excellent wear resistance provides long tool life.
- Reduces adhesion of work material for beautiful finished machined surfaces.

Characteristic Values

For Turning

Carbide

IGETALLOY cemented carbides have a solid history and a wide variety of grades to suit many different applications. They are widely used and appreciated for their superior performance.

The IGETALLOY range consists of cemented carbide grades with various characteristics that correspond to the cutting tool application. This is achieved by varying the carbide components: the WC structure (main component) and additives such as TiC, TaC, and Co (binder).
The wide selection of IGETALLOY grades provides excellent wear resistance and toughness in various cutting conditions.

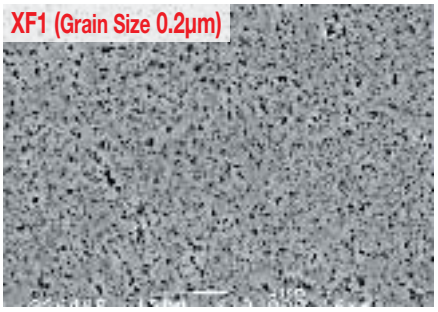
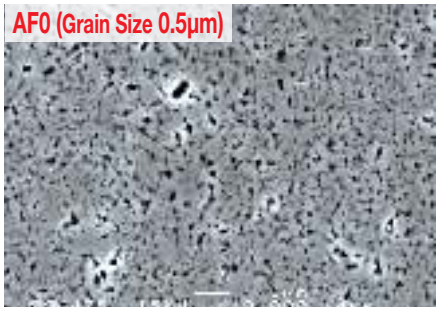
Carbide

The IGETALLOY micro-fine grained carbide series provides micro-fine grain structure at a world-class level to deliver superior performance in small drills and other tools.

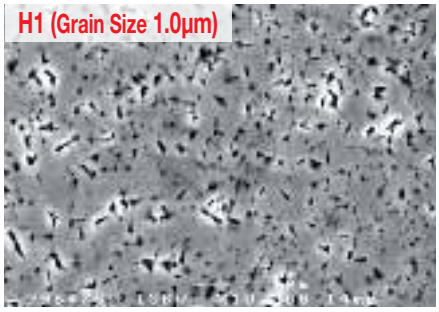
IGETALLOY micro-fine grained cemented carbides feature a WC structure between 0.2 and 1μm and are extremely strong and hard. They also provide excellent sharpness and superb surface quality on machined surfaces.
These features provide excellent performance in a variety of applications from ø0.1mm PCB drills and endmill materials to thin-bladed slitters and precision moulds.

● Ultra-fine Grained Carbide





● Micro-grained Carbide



Characteristic Values

Classification	Grade	Properties					Features	Applications
		Grain Size (μm)	Co Content (wt%)	TRS (GPa)	Hardness (HRA)	Hardness HV (GPa)

CBN

High hardness and thermal resistance for machining hardened steel and hard cast iron. High-speed finishing of gray cast iron with long tool life is also possible.

In 1977, Sumitomo Electric Hardmetal successfully developed a revolutionary CBN sintered tool called SUMIBORON®. The main component in SUMIBORON® is cubic boron nitride with a special ceramic binder sintered under super high pressure and temperature. Compared to other conventional tool materials, CBN has higher hardness and excellent thermal resistance. With these distinct characteristics, SUMIBORON® can perform machining of hardened steel, hard cast iron and exotic alloys which was previously only done by grinding. Excellent efficiency and longer tool life can also be achieved from high-speed finishing of cast iron.

Features

Structure Features	Structure	CBN Content	Hardness (GPa)	Grade	Work Materials/Applications	Features
Purely CBN particles, firmly bonded		High	54	New NCB100	Cast Iron, Titanium Alloy, Pure Titanium, Co-Cr Alloy, Cemented Carbide, Cermet	• Containing no binder, the nano-to sub-micron CBN particles have a directly bonded structure • The high hardness and thermal conductivity make it highly efficient with a long tool life when machining exotic alloys such as titanium alloys and Co-Cr alloys
Mainly CBN grains fused together				BN700 BN7000 BN7500 BNS800	Cemented Carbide, Chilled Cast Iron, Ni-Hard Cast, Iron, Sintered Ferrous Alloy, Heat-resistant Alloy, Cast Iron, Sintered Ferrous Alloy	• High CBN content. Structure consists of strongly fused CBN grains • Suited to cutting cast iron, heat-resistant alloy, cemented carbide and other high-hardness materials
Mainly CBN grains held together with a binder		Low	27	BN1000/BN2000/BN350 BNX10/BNX20/BNX25 BN500/BNC2010/BNC2020 BNC300/BNC100/BNC160 BNC200/BNC500	Alloy Steel, Case Hardened Steel, Carbon Tool Steel, Bearing Steel, Die Steel, Ductile Cast Iron	• CBN grains are fused together strongly with a special ceramic binder • Strong CBN binding provides superior wear resistance and toughness when cutting hardened steel and cast iron

Characteristic Values

Part Material	Grade	Binder	Carbon Content (%)	Grain Size (μm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (μm)	Features
H Hardened Steel	**BNC2010**	TiCN	50 to 55	2	30 to 32	1.1 to 1.2	TiCN Multiple Layers	1.5	Improved wear resistance from coating and substrate, achieves excellent and consistent surface finish.
	BNC2020	TiN	70 to 75	5	34 to 36	1.4 to 1.5	TiAlN Multiple Layers	1.5	Utilising a tough substrate along with a highly wear-resistant and adhesive coating layer, to achieve long tool life in general-purpose to high-efficiency applications.
	BNC300	TiN	60 to 65	1	33 to 35	1.5 to 1.6	TiAlN	1	Suitable for finishing of workpieces with a mixture of continuous and interrupted cutting portions.
	BNC100	TiN	40 to 45	1	29 to 32	1.0 to 1.1	TiAlN/TiCN	2	Grade suitable for high-speed finishing thanks to highly wear-resistant coating.
	BNC160	TiN	60 to 65	3	31 to 33	1.2 to 1.3	TiAlN/TiCN	2	Achieves stable, high-precision finishing of hardened steel.
	BNC200	TiN	65 to 70	4	33 to 35	1.4 to 1.5	TiAlN	2	Provides long tool life thanks to tough substrate and highly wear-resistant coating.
	BN1000	TiCN	40 to 45	1	27 to 31	0.9 to 1.0	—	—	Grade with ultimate wear and fracture resistance, suitable for high-speed cutting.
	BN2000	TiN	50 to 55	2	31 to 34	1.1 to 1.2	—	—	General-purpose grade for hardened steel machining with a high degree of fracture and wear resistance.
	BNX20	TiN	55 to 60	3	31 to 33	1.0 to 1.1	—	—	Grade with excellent crater wear resistance, suitable for high-efficiency cutting under high-temperature conditions.
	BN350	TiN	60 to 65	1	33 to 35	1.5 to 1.6	—	—	Grade with ultimate cutting edge strength, suitable for heavy interrupted cutting.
	BNX10	TiCN	40 to 45	3	27 to 31	0.9 to 1.0	—	—	Highly wear-resistant grade, suitable for high-speed continuous cutting.
	BNX25	TiN	65 to 70	4	29 to 31	1.0 to 1.1	—	—	Grade with superior fracture resistance in high-speed cutting and suited for high-speed interrupted cutting of hardened steel.
Sintered Alloy	**BN7500**	Co Compound	90 to 95	1	41 to 44	2.0 to 2.1	—	—	Grade maintaining ultimate cutting edge sharpness, suitable for finishing of powdered metal.
	BN7000	Co Compound	90 to 95	2	41 to 44	1.8 to 1.9	—	—	Grade exhibiting improved wear and fracture resistance in roughing of sintered materials.
K Cast Iron	**BNS800**	Al Alloy	85 to 90	8	39 to 42	0.9 to 1.1	—	—	Grade with 100% solid CBN structure and excellent thermal shock resistance.
	BN7000	Co Compound	90 to 95	2	41 to 44	1.8 to 1.9	—	—	Grade exhibiting wear and fracture resistance in cutting of cast iron and exotic alloys.
	BN500	TiC	65 to 70	6	32 to 34	1.0 to 1.1	—	—	Grade optimised for cast iron cutting. Provides superior wear and fracture resistance.
	BNC500 (For Ductile Cast Iron)	TiC	60 to 65	4	32 to 34	1.1 to 1.2	TiAlN	2	Grade suitable for machining of hard-to-cut cast iron, thanks to the highly wear-resistant substrate and coating.
S Exotic Alloy	New **NCB100**	—	100	up to 0.5	51 to 54	1.8 to 1.9	—	—	Achieves high-efficiency, improved machining accuracy, and long tool life in machining of exotic alloys such as titanium alloy and Co-Cr alloys.

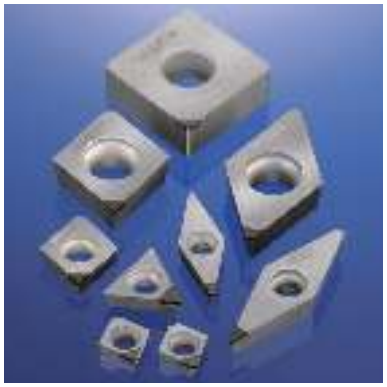
Polycrystalline Diamond



Excellent wear resistance, longer tool life and high-speed, high-efficiency, high-precision cutting of non-ferrous metals and non-metals.

SUMIDIA® is a polycrystalline diamond material made from sintered diamond powder that was first created using our proprietary technology in 1978.
SUMIDIA®'s superior wear resistance achieves longer tool life in high speed, high-efficiency and high-precision machining of non-metal and non-ferrous metal applications including aluminum, copper, magnesium and zinc alloys.

SUMIDIA® Binderless uses nano-polycrystalline diamond for the cutting edge, demonstrating excellent wear resistance and fracture resistance.
In particular, it achieves extended tool life and machining accuracy superior to conventional polycrystalline diamond when machining hard brittle materials such as cemented carbide.

Features

- Diamond particles on the order of submicrons to several dozen microns, sintered at high density

Ceramic

Superb wear resistance enables ultra-high-speed machining.

Sumitomo Electric Hardmetal's Advanced Ceramic utilises a special process to produce extremely tough grades.

This new development permits ultra-high-speed cutting of cast iron, heat-resistant alloy, and ultra-hard rolled material with stability.

Grade Map

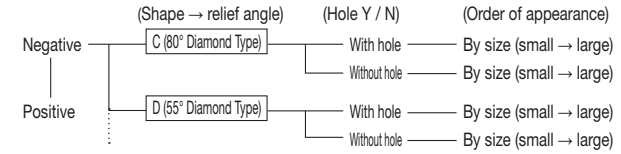
Format of This Chapter

(1) Turning insert listing order is negative type inserts followed by positive type inserts.
(2) The order of listing in each type group is as follows: C (80° Diamond Type) → D (55° Diamond Type) → R (Round Type) → S (Square Type)→ T (Triangular Type) → V (35° Diamond Type) → W (Trigon Type).
(3) Listing of inserts with the same relief angle are provided for those with holes and then those without holes.
(4) Inserts are grouped by shape and then further divided by size (small to large according to cutting edge length and thickness).

• Structure Diagram



Symbols in Insert Diagrams

***Symbols conform to ISO13399.**

L: Cutting edge length, IC: Inscribed circle, S: Thickness, RE: Nose radius, D1: Hole diameter (For CBN (SUMIBORON) and PCD (SUMIDIA), L indicates side length.)

Handed Inserts

*Typically, photos show right-handed inserts.

If the bottom right reads "Photo: Left-handed," this indicates an exception where the photo shows a left-handed insert.

Insert Grades

(1) Each grade is carefully selected from Coated Carbide (CVD / PVD), Cermet, Carbide or Ceramic.
(2) The listing of CBN (SUMIBORON) and PCD (SUMIDIA) are in the dedicated sections: CBN (SUMIBORON) page L30 and PCD (SUMIDIA) page M10.

O	Others

★ mark indicates inserts that are sometimes used with a 10° relief angle.

Table 3: (3) Tolerance (inch)

Symbol	Tolerance of Nose Height (inch)	Inscribed Circle (inch)	Thickness (inch)
A	±0.0002	±0.001	±0.001
F	±0.0002	±0.0005	±0.001
C	±0.0005	±0.001	±0.001
E	±0.001	±0.001	±0.001
G	±0.001	±0.001	±0.005
J★	±0.0002	± .002 to ± .006	±0.001
M★	± .003 to ± .008	± .002 to ± .006	±0.005
U★	± .005 to ± .015	± .003 to ± .010	±0.005

★ mark indicates inserts that generally have sintered side surfaces. Refer to the table below (reference) for details on M class precision.

(Reference) Breakdown of M-Class Tolerance by Shape and Size

● Tolerance of Nose Height (inch)

Inscribed Circle	Triangular Type	Square Type	80° Diamond Type	55° Diamond Type	35° Diamond Type	Round Type
1/4	±.003	±.003	±.003	±.004	±.006	—
3/8	±.003	±.003	±.003	±.004	±.006	—
1/2	±.005	±.005	±.005	±.006	—	—
5/8	±.006	±.006	±.006	±.007	—	—
3/4	±.006	±.006	±.006	±.007	—	—
1	±.007	±.007	±.007	—	—	—
1 1/4	—	±.008	—	—	—	—

● Tolerance of Inscribed Circle (inch)

Inscribed Circle	Triangular Type	Square Type	80° Diamond Type	55° Diamond Type	35° Diamond Type	Round Type
1/4	±.002	±.002	±.002	±.002	±.002	—
3/8	±.002	±.002	±.002	±.002	±.002	±.002
1/2	±.003	±.003	±.003	±.003	—	±.003
5/8	±.004	±.004	±.004	±.004	—	±.004
3/4	±.004	±.004	±.004	±.004	—	±.004
1	±.005	±.005	±.005	—	—	±.005
1 1/4	—	±.006	—	—	—	±.006

Table 4: (4) Insert Hole

Symbol	Hole Y/N	Hole Shape	Chipbreaker	Shape (Cross Section)	Symbol	Hole Y/N	Hole Shape	Chipbreaker	Shape (Cross Section)
N	No	No	No		A	Yes	Cylindrical	No	
E									
R			One Face		M			One Face	
F			Double-sided		G			Double-sided	
W	Yes	Straight hole + single chamfer (40° to 60°)	No		B	Yes	Straight hole + single chamfer (70° to 90°)	No	
T			One Face		H			One Face	
D									
Q	Yes	Straight hole + double chamfer (40° to 60°)	No		C	Yes	Straight hole + double chamfer (70° to 90°)	No	
U			Double-sided		J			Double-sided	
					X	—	—	—	Special

Indexable Insert Identification Table

4	3	2	EGE
12	04	08	N - GE
(5)	(6)	(7)	(8) (9)

- (5) Cutting Edge Length — Refer to Table 5
- (6) Thickness — Refer to Table 6
- (7) Nose Radius — Refer to Table 7
- (8) Feed Direction — Refer to Table 8
- (9) Chipbreaker — Refer to Table 9

Picture of insert shown as example

Table 5: (5) Cutting Edge Length (Typical Examples)

Note: Cutting edge length indicates the dimensions for a sharp edge.

Shape	ANSI Symbol	ISO Symbol	Cutting Edge Length (in.)	Inscribed Circle	Shape	ANSI Symbol	ISO Symbol	Cutting Edge Length (in.)	Inscribed Circle	Shape	ANSI Symbol	ISO Symbol	Cutting Edge Length (in.)	Inscribed Circle

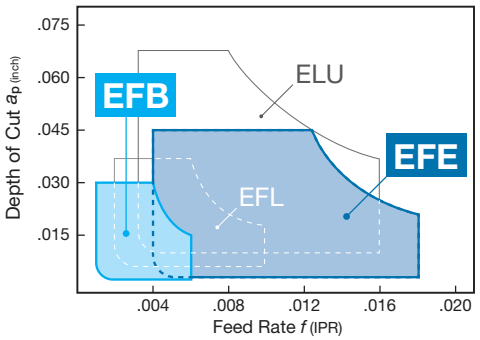
EFB / EFE

P Steel

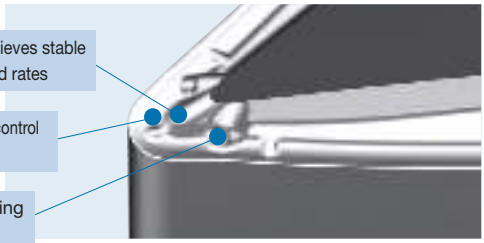
- The EFE main breaker for finishing achieves stable chip control over a wide range of feed rates for low carbon steel and general steel.
- Item range covers a wide variety of machining applications.
- The EFB for low feed finishing increases chip strain and thereby improves chip breaking performance thanks to the variable rake angle in the nose radius.

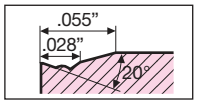
■ **Application Range**



EFE Breaker for Finishing

General purpose to high feed cutting





Cross Section of Chipbreaker

Application Examples

Part Material: Iron plate (1011 Hot Rolled Steel) Facing Insert: CNMG432EFE-AC8025P
Cutting Conditions: v_c=656 SFM, f=.0059 IPR, a_p=.0079-.0197", Wet

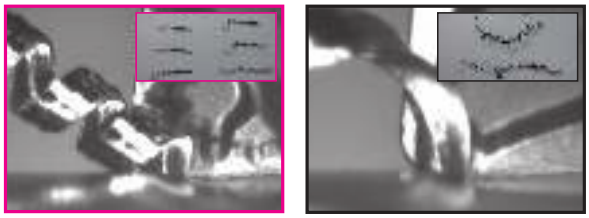
Breaks chips with a steady curl even in facing of rolled steel

EFE Breaker (AC8025P) | Competitor's Product

Performance — Chip Control

Part Material: Pipe material (A36) Insert: CNMG432EFE-AC8025P
Cutting Conditions: v_c = 656 SFM, f = .0157 IPR, a_p = .0079" Dry

Excellent chip control at low depth of cut, high feed conditions



EFE Breaker (AC8025P) | Conventional Tool

Application Examples

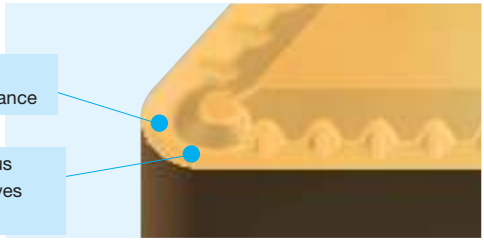
Part Material: 1053 Steel ø.785-3.935" External Diameter/Facing Insert: DNMG433EFE-AC8025P
Cutting Conditions: v_c=591 SFM, f=.0098 IPR (Corner), .0177IPR (Straight), a_p=.0118", Wet

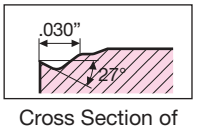
Stable chip control even at low depth of cut and variable feed conditions

EFE Breaker (AC8025P) | Conventional Tool

EFB Breaker for Low Feed Finishing

Low feed cutting





Cross Section of Chipbreaker

Application Examples

Part Material: Pipe material (A36) Internal Diameter Machining Insert: DNMG431EFB-T3000Z
Cutting Conditions: v_c=1155sfm, f=.0012-.0079 IPR, a_p=.0276", Wet

Small curls of chips even for pipe material, achieving a steady chip length

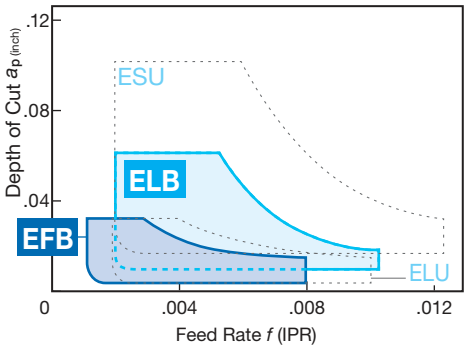
EFB Chipbreaker (T3000Z) | Competitor's Product

EFB / ELB

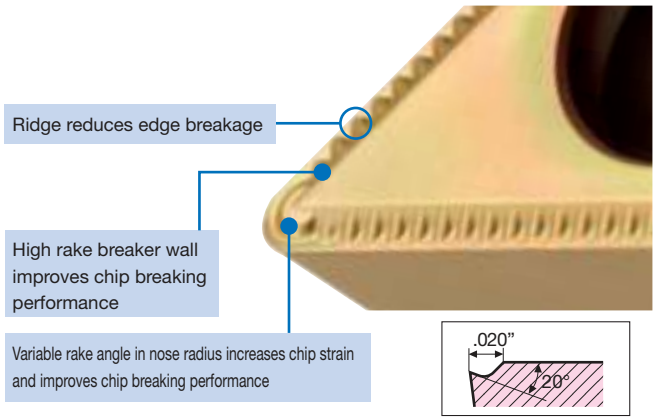
P Steel

- The EFB for finishing and the ELB for light cutting have been added to the chipbreaker series for low carbon and general steel machining in addition to the existing ELU for finishing and ESU for light cutting.
- The EFB and ELB chipbreakers improve chip control in finishing of low carbon and general steel.

■ Application Range

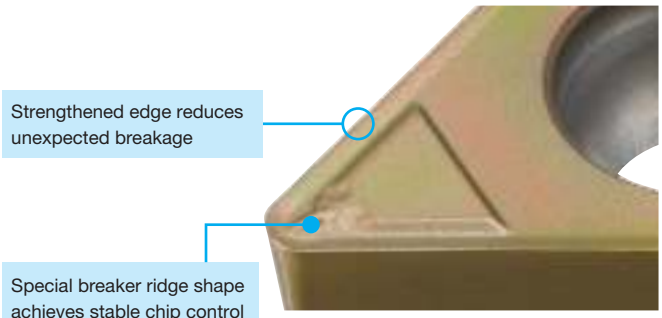


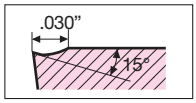
EFB Breaker for Finishing



Cross Section of Chipbreaker

ELB Breaker for Light Cutting





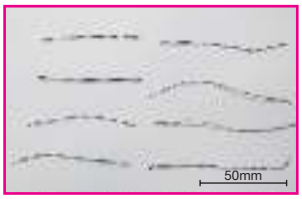
Cross Section of Chipbreaker

Performance

Chip Control

Part Material: Pipe material (A36) ø1.18" Internal Diameter Machining Insert: TPMT221EFB-T1500A
Cutting Conditions: v_c = 328 SFM, f = .0047 IPR, a_p = .0039" Wet

Achieves stable chip control at shallow depths of cut and low feeds

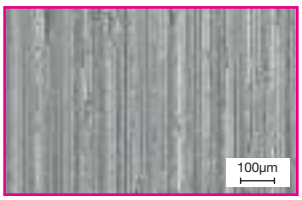


EFB Chipbreaker (T1500A)

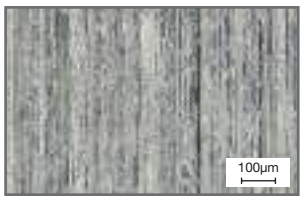
Competitor's Product

Comparison of Surface Roughness of Finished Surfaces

Part Material: Pipe material (A36) ø3.93" Internal Diameter Machining Insert: TPMT221EFB-T1500A
Cutting Conditions: v_c = 656 SFM, f = .0028 IPR, a_p = .0039" Wet



EFB Chipbreaker (T1500A)



Competitor's Product

Performance

Chip Control (1)

Part Material: Pipe material (A36) ø1.18" Internal Diameter Machining Insert: TPMT221ELB-T1500A
Cutting Conditions: v_c = 656 SFM, f = .0059 IPR, a_p = .0197" Wet

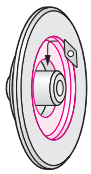
Achieves stable chip control in light cutting

ELB Chipbreaker (T1500A)

Competitor's Product

Chip Control (2)

Part Material: Hub (1045 Steel) Insert: VBMT332ELB-T1500A
Cutting Conditions: v_c=787 SFM, f=0.010 to .011 IPR, a_p=.0236", Wet



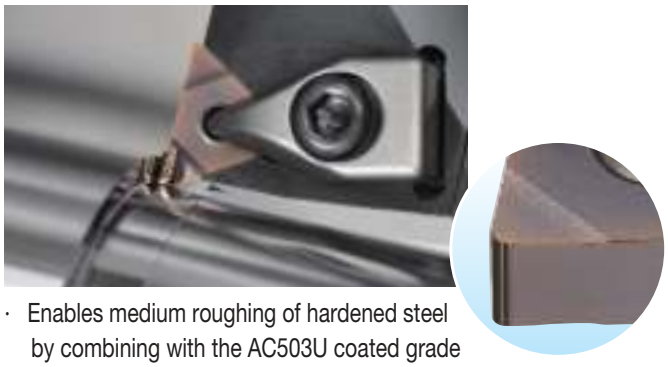
ELB Chipbreaker (T1500A)

Competitor's Product

Doubles the tool life by improving chip control and reducing blemishes on machined surfaces

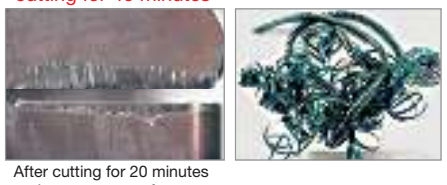
EGH H / (R/L)AX / (R/L)AY N

Negative Insert for Medium Roughing EGH Chipbreaker



- Enables medium roughing of hardened steel by combining with the AC503U coated grade
- Reduces heat generation and enables deep cuts (a_p=.040 to .120") in hardened steel thanks to a wide neutral ground breaker (rake angle = 4°) and sharp edge
- Makes smooth chip evacuation possible

Performance



Part Material: D1 Tool Steel (61HRC) Insert: TNGG331EGH-AC503U
Cutting Conditions: v_c = 164 SFM, f = .0020 IPR, a_p = .1181" Dry

■ Recommended Cutting Conditions

Part Material: Hardened steel (50-62HRC), SKD11, SKD61, SKH51, high-speed steel powder, high-speed steel

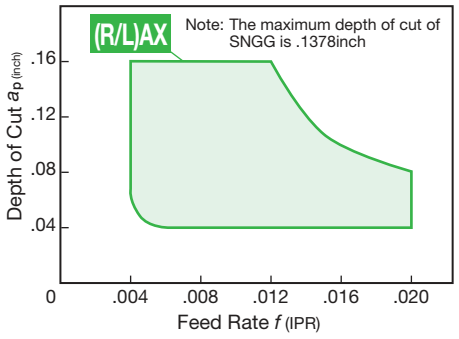
Process	Cutting Speed v_c (SFM)	Feed Rate f (IPR)	Depth of Cut a_p(inch)	Recommended Chipbreaker
Finishing	130 to 330	.0008 to .0040	< .040	Without Chipbreaker Inserts
Medium Roughing	65 to 200	.0008 to .0020	.040 to .120	EGH

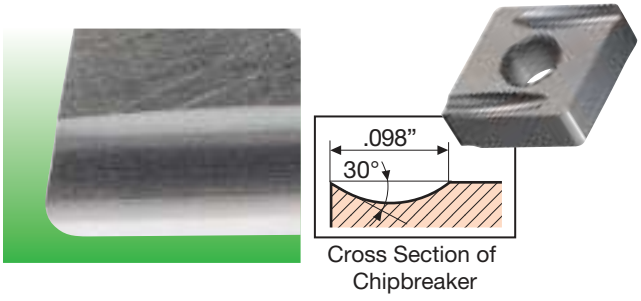
For hardened steel (50 to 62HRC)

Negative Insert (R/L)AX Chipbreaker

- Ideal for external turning of non-ferrous metal when combined with carbide grade H1
- Achieves stable cutting over a wide cutting range thanks to a high-quality parallel ground breaker
- Covers a wide variety of applications with a wide selection of tools (28 items)

■ Application Range



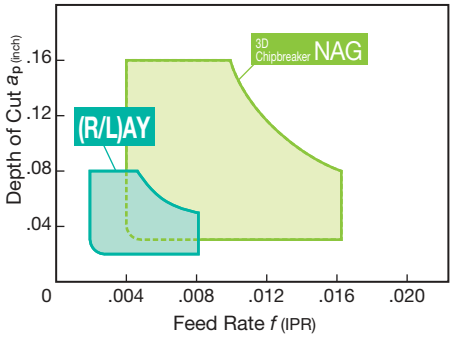


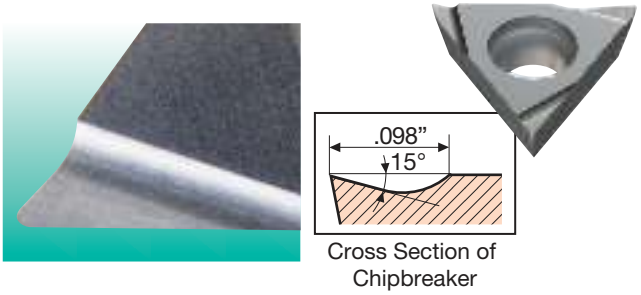
Cross Section of Chipbreaker

Positive Insert (R/L)AY Chipbreaker

- Ideal for internal turning of non-ferrous metal when combined with carbide grade H1
- Provides excellent machined surface quality and chip control with a high-quality ground breaker in finishing applications
- In addition to a wide selection (56 items), this product can be used in combination with the NAG 3D chipbreaker, covering a wide variety of applications

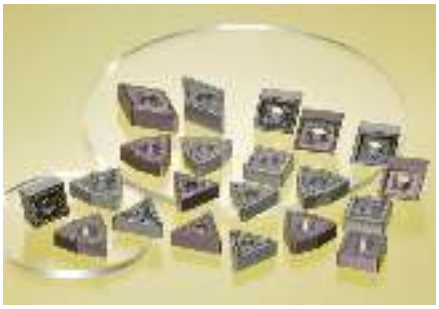
■ Application Range





Cross Section of Chipbreaker

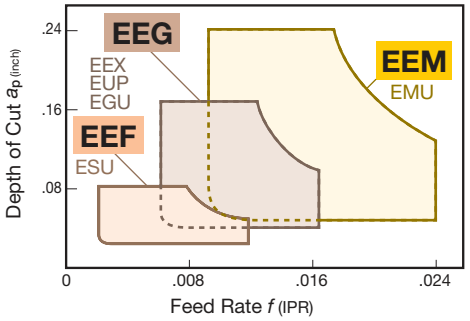
EEF / EEG / EEM



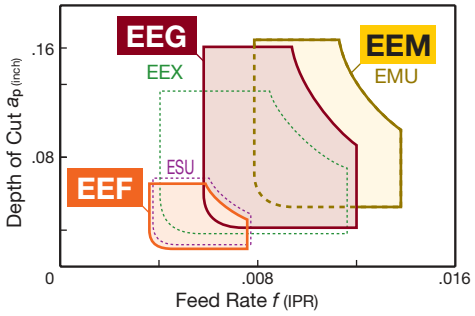
- The chipbreaker series for stainless steel machining features EEF for finishing, EEG for medium cutting and EEM for roughing.
- The EEM achieves both excellent wear resistance and high cutting edge strength.
- The EEG and EEF breakers are ideal for a variety of exotic alloys including titanium alloy and heat-resistant alloys.
- Achieves both excellent wear resistance and strong chip control, reducing issues with equipment and quality that occur in conventional chipbreakers due to unstable tool life and chips.

■ Application Range

Stainless steel machining

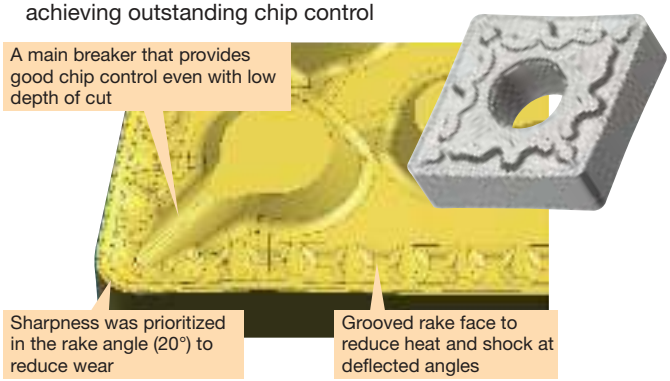


Milling of Exotic Alloys



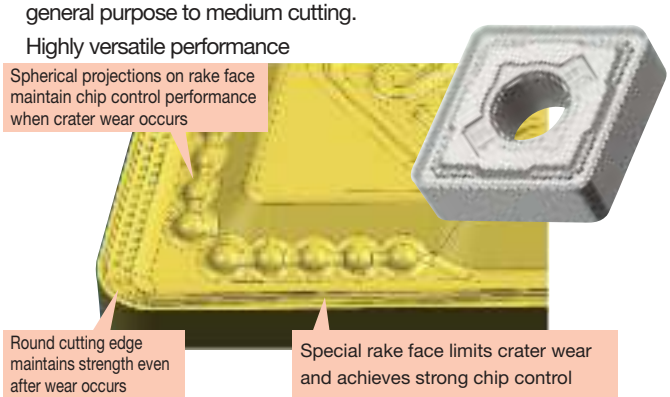
EEF Chipbreaker for Finishing

● Reduces curl diameter of chips during finishing, achieving outstanding chip control



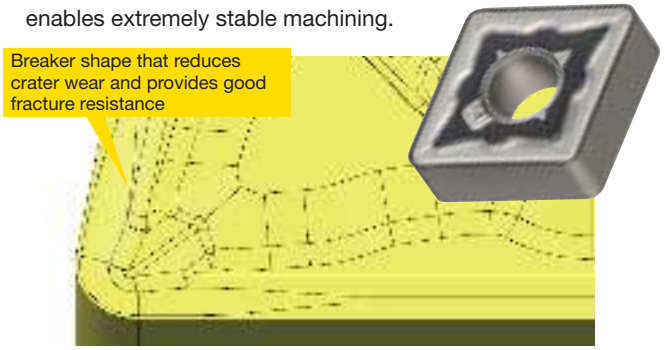
EEG Chipbreaker for Medium Cutting

● Achieves excellent wear resistance and strong chip control in general purpose to medium cutting.
Highly versatile performance

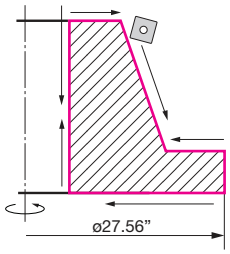


EEM Chipbreaker for Roughing

● Achieves excellent fracture and crater wear resistance and enables extremely stable machining.



Performance



Part Material: Stainless Cast Steel (Equivalent to 316 Stainless) Flange part
Insert: SNMG644EEM-AC6030M
Cutting Conditions: v_c=230 SFM
f=.0197 IPR, a_p=.0118 to .3150”, wet

EEM Chipbreaker (AC6030M) | Conventional Tool

Reduces cutting edge breakage and enables stable machining

Ceramic Inserts

SN2000K* → Finishing and roughing of cast iron

SN2100K* → Interrupted turning /milling of cast iron

SN1000S → SiAlON grade for rough turning/ milling of exotic alloys

WX1500 → Cold pressed whiskered ceramic grade for continuous turning of exotic alloys

WX2000 → High speed turning of super alloys

NB150H → High speed finishing of hardened steels

*SN2000K & SN2100K grades not shown in stock can be made to order. Call for price and delivery.

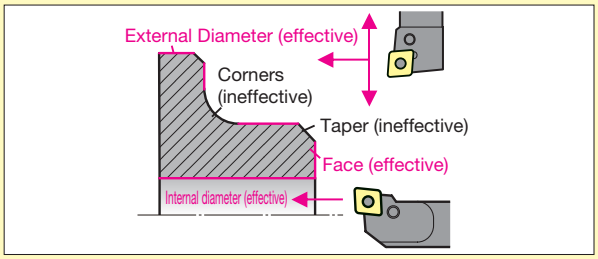
WO: Wiper Insert, 2 cutting edges

Precautions when Using Wiper Inserts

Effects of the wiper insert

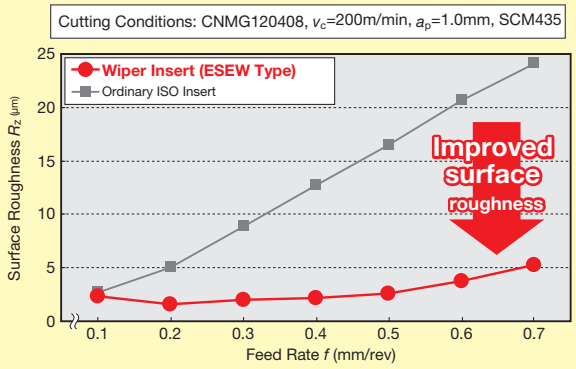
Wiper inserts are effective for external/internal diameter machining and for facing as shown in the figure below, surface roughness of the machined surface can be maintained even in high-feed machining.

■ Effective Range of Wiper Inserts



* Note that wiper inserts leave the same machined surface roughness as normal inserts at tapers and corners.
* The cutting edge position may need to be offset depending on the insert shape. See the offset table below.

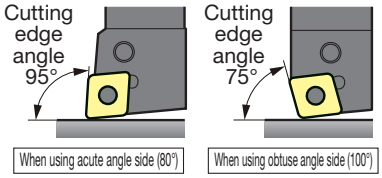
■ Machined Surface Roughness (actual measurements)



Coated Carbide / Coated Cermet / Cermet

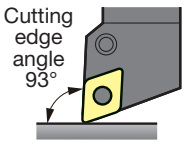
CNMG/WNMG/CCMT/CPMT Type ELUW / EGUW / ESEW Type Chipbreaker (ELUW Type chipbreaker only for CCMT / CPMT)

- Use a holder with a cutting edge angle of 95°.
- No tool compensation required.
  CNMG / WNMG / CCMT / CPMT type wiper inserts comply with the ISO standard, allowing use without correcting the machining program.
- The obtuse (100°) corner on the CNMG type can also provide a wiper effect.



DNMX Type ESEW Type Chipbreaker

- Use a holder with a cutting edge angle of 93°.
- Tool compensation required.
  DNMX type wiper inserts do not comply with the ISO standard.
  Correct the machining program (tool offset) as explained on the next page (B135).

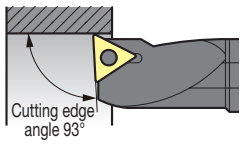


DNMX Type
Tool Program Correction Guide
(→ B135)

TPGX Type SDW Type Chipbreaker

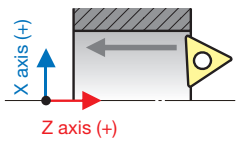
- Use a boring bar with a 93° cutting edge angle.
- Tool compensation required.
  TPGX type wiper inserts do not comply with the ISO standard.
  Correct the cutting edge position (tool offset) as explained on the right.

Note: Unlike the other profiles, the TPGX type is only effective for boring.



Cutting Edge Position Correction for TPGX Type Breaker (SDW)

Internal boring

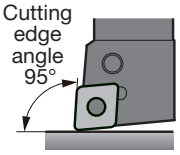


Nose Radius	X direction	Z direction
R0.4	0.12	-0.02
R0.8	0.12	-0.02

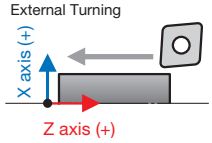
CBN (SUMIBORON / Coated SUMIBORON)

CNGA Type / CCGW Type / WNGA Type WG/WH Type Chipbreaker

- Use a holder with a cutting edge angle of 95°.
- Tool compensation required.
  CNGA, CCGW and WNGA type wiper inserts do not comply with the ISO standard. Correct the cutting edge position (tool offset) as explained on the right.



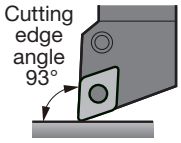
Cutting Edge Position Correction for CNGA/CCGW/WNGA Type Breaker (WG/WH Type)



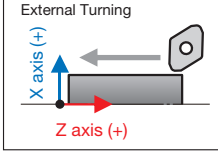
Nose Radius	Type	X direction	Z direction
R0.4	WG Type	-0.02	-0.02
	WH Type	-0.06	-0.06
R0.8/R1.2	WG Type	-0.01	-0.01
	WH Type	-0.06	-0.06

DNGA Type / DCGW Type WG/WH Type Chipbreaker

- Use a holder with a cutting edge angle of 93°.
- Tool compensation required.
  DNGA and DCGW type wiper inserts do not comply with the ISO standard.
  Correct the cutting edge position (tool offset) as explained on the right.



Cutting Edge Position Correction for DNGA/DCGW Type Breaker (WG/WH Type)



Nose Radius	Type	X direction	Z direction
R0.4	WG Type	-0.17	-0.01
	WH Type	-0.70	-0.06
R0.8	WG Type	-0.05	0
	WH Type	-0.58	-0.05

Note: Unlike other contour shapes, the DNGA / DCGW Type can only obtain the wiper effect with outer diameter and inner diameter cutting techniques, and cannot be used for edge cutting.

Dimensions in mm

dimensions in mm

Tool Program Correction Guide for DNMX Type Wiper Inserts (Compensation: mm)

(1) Cutting edge position compensation (tool offset) in X and Z axes

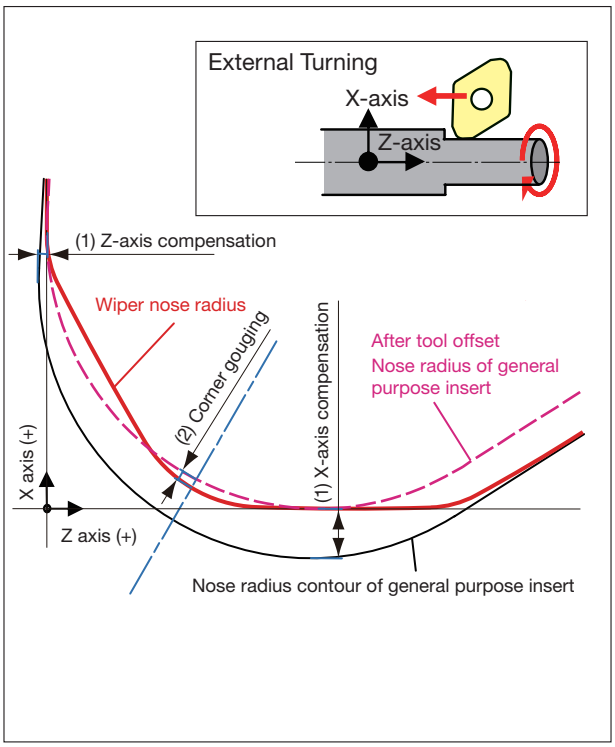
The cutting edge position for this insert differs from standard ISO inserts and therefore requires dimensional correction in the X and Z axes as shown in the table on the right.

*** The X axis compensation is positive for internal boring.**

External Turning

Nose Radius	X direction	Z direction
R0.4	-0.14	-0.02
R0.8	-0.14	-0.02
R1.2	-0.1	-0.03

● Nose Radius Tip Diagram

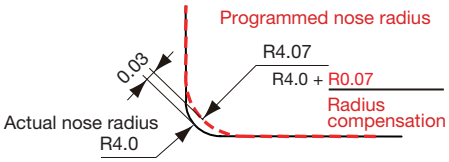


(2) Tool compensation for corners (based on compensation in step (1))

The nose radius must be corrected to prevent the insert from gouging the corner in the programmed tool path.

Programmed nose radius = actual nose radius + radius compensation

Example) To machine an R4.0 corner (using an R0.8 nose)



Nose Radius	Gouging	Radius compensation
R0.4	0.02	+R0.04
R0.8	**0.03**	**+R0.07**
R1.2	0.08	+R0.18

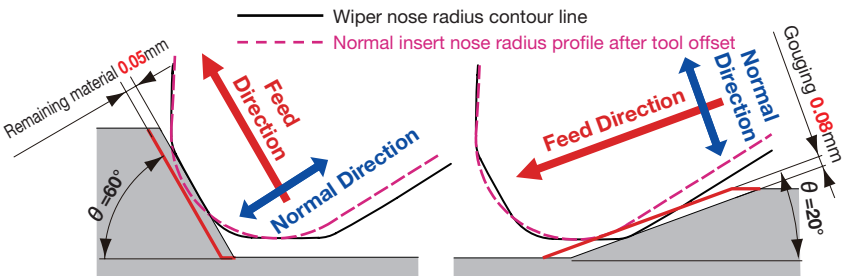
(3) Tool compensation for tapers (based on compensation in step (1))

Tool paths for tapers leave gouging and unmachined surfaces with respect to the programmed tool path. Correct the normal direction as shown below.

Compensation + indicates gouging
Compensation - indicates unmachined surfaces

Nose Radius	Taper Angle (θ)				
	-25°	**-20°**	-15°	-10°	-5°
R0.4	0.08	0.07	0.05	0.04	0.02
R0.8	0.09	**0.08**	0.06	0.05	0.02
R1.2	0.05	0.05	0.05	0.03	0.02

Example) To machine an R0.8 nose and 60°/-20° taper angle (θ)



Nose Radius	Taper Angle (θ)																		
	0°	5°	10°	15°	20°	25°	30°	35°	40°	45°	50°	55°	**60°**	65°	70°	75°	80°	85°	90°

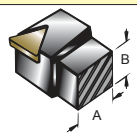
Table 4

(4) Insert Relief Angle	
Symbol	Relief Angle
B	5°
C	7°
D	15°
E	20°
F	25°
N	0°
P	11°

Table 11

(11) Shank Size

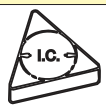


Square Shanks
This indicates the A & B dimensions in sixteenths (1/16).
Examples:
12 = 12/16 =3/4 sq.
16 = 16/16 =1.0 sq.
20 = 20/16 =1-1/4 sq.

Rectangle Shanks
The first digit indicates the "A" dimension in eighths (1/8).
The second digit indicates the "B" dimension in quarters (1/4).
examples:
86 = A x B
1.0 x 1-1/2
85 = A x B
1.0 x 1-1/4

Table 12

(12) Insert Size

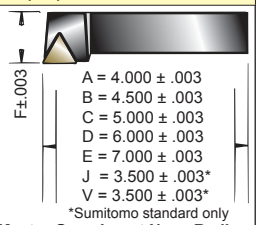


For equal sided inserts this indicates the inscribed circle (I.C.) in eighths (1/8)
Examples,
6 = 6/8 = 3/4" I.C.
4 = 4/8 = 1/2" I.C.
2.5 = 2.5/8 = 5/16 I.C.

For rectangles and parallelograms two digits are necessary.
1st digit = number of eighths (1/8) in width.
2nd digit = number of quarters (1/4) in length.

Table 13

(13) Qualifications



A = 4.000 ± .003
B = 4.500 ± .003
C = 5.000 ± .003
D = 6.000 ± .003
E = 7.000 ± .003
J = 3.500 ± .003*
V = 3.500 ± .003*
*Sumitomo standard only

Master Gage Insert Nose Radius Chart for Qualified Holders

Insert I.C.	Nose Radius
1/4, 5/16	.015
3/8, 1/2	.031
5/8, 3/4	.047
1.0	.062

Example: **D T F N R 25 25 (–) M 16 (04 W)**

(1) (2) (3) (4) (5) (6) (7) (8) (9) (10) (11)

- (1) Clamping System — Refer to Table 1
- (2) Insert Shape — Refer to Table 2
- (3) Holder Style — Refer to Table 3
- (4) Insert Relief Angle — Refer to Table 4
- (5) Feed Direction — Refer to Table 5
- (6) Shank Height — Refer to Table 6
- (7) Shank Width — Refer to Table 7
- (8) Shank Length — Refer to Table 8
- (9) Insert Cutting Edge Length — see Page B3 (Table 5)
  Previous cat. nos.: See Table 9
- (10) Insert Thickness — Refer to Table 10
  Added only for holders with the same catalogue numbers but different insert thicknesses
- (11) Shim — Added only for holders with shims.
  Added only for holders with shims meant for SEC-30/GD types.

Metric

Example:

Table 8

(8) Shank Length	
Symbol	Length (mm)
F	80
H	100
K	125
M	150
N	160
P	170
Q	180
S	250
T	300
U	350

For some previous catalogue numbers, a hyphen (-) is used instead of a letter.

Table 9 Applicable for previous cat. nos. only

Insert Inscribed Circle			Insert Thickness	
Symbol	Inscribed Circle (mm)		Symbol	Thickness (mm)
3	9.525	+	2	3.18
4	12.70		3	4.76
5	15.875		4	6.35
6	19.05		5	7.94
8	25.40		6	9.52

Previous cat. nos. indicated an inscribed circle symbol and insert thickness symbol displayed in 2 columns.

For Round Type Inserts

Symbol	Inscribed Circle (mm)
10	10
12	12
16	16
20	20
25	25
32	32

• Identification Example

DTFNR2525M16

· Structure: Double Clamp Method
· Shape: With Triangle Insert, Cutting Edge Angle 91°
· Shank: H - 25mm, W - 25mm, L - 150mm

Table 6

(6) Shank Height	
Symbol	Height (mm)

● Nose radius position calculation

Calculation Formula for Nose Radius Position (mm)

Shape		Formula
	Triangular Type	B = 3/2*d* − RE
	Square Type	B = (√2 − 1) × (*d*/2 − RE)
	Diamond Type	B = (1/Sin(θ/2) − 1) × (*d*/2 − RE)

Values of IC and RE for the Calculation of B (mm)

Inscribed Circle Nominal Value	IC for Calculation
3.97	3.9688
4.76	4.7625
5.56	5.5562
6.35	6.3500
7.94	7.9375
9.525	9.5250
12.70	12.7000
15.875	15.8750
19.05	19.0500
25.40	25.4000

Nose Radius	Nominal Value	RE for Calculation
02	0.2	0.203
04	0.4	0.397
08	0.8	0.794
12	1.2	1.191
16	1.6	1.588
24	2.4	2.381

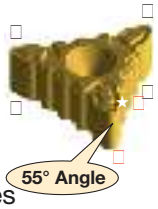
■ Features

- 55° Included Angle with 6 Cutting Edges
  1.5 times more cutting edges compared to DNMG inserts, for greatly reduced machining costs



- Extra-Strong Clamping
  Powerful clamping with double clamp-on lock and serrated insert design

· Prevents the cutting edge position from shifting during profiling
· Reliable even in interrupted machining

● T-REX Insert/Tool Holder Identification

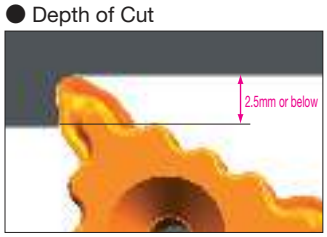
Insert
TRM 55 17 08 -GU
T-REX Insert | Angle | Insert Size | Nose Radius | Name of Chipbreaker

External Holder
DTR 55 C R 2525 -M 17
T-REX Holders | Angle | Cutting Edge Angle | Feed Direction | Shank Size | Shank Length | Insert Size

Note: Cutting Edge Angle
C: 93° (95.5° for major cutting edge)
Q: 105° (107.5° for major cutting edge)

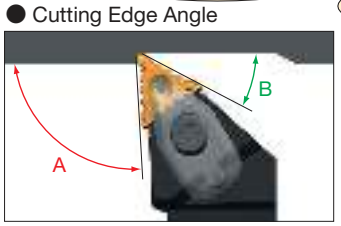
■ Important Notes

● Depth of Cut



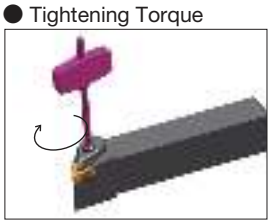
Maximum depth of cut should be 2.5mm.

● Cutting Edge Angle



Holder Cat. No.	A	B	Note
DTR55C Type	93°	27°	Main blade cutting edge angle is 95.5°
DTR55Q Type	105°	15°	Main blade cutting edge angle is 107.5°

● Tightening Torque



For the insert clamp, use the included dedicated wrench (TSW040) to tighten at 3.5 to 4.5N·m torque.

●= USA Stocked Item ★= World Wide Warehouse Item

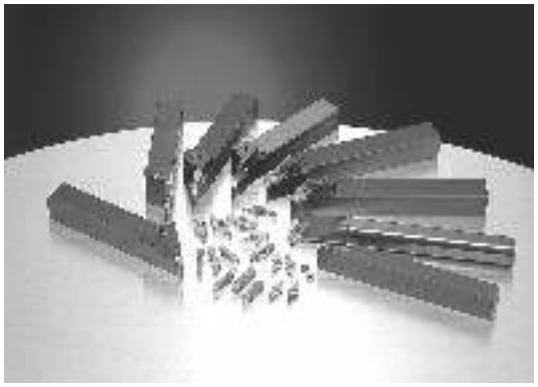
MV Type / GD Type Profiling Tool Holders



■ General Features

With a wide range of insert shapes (35˚ diamond shaped type, dogbone type and round type) available in both cemented carbide and polycrystalline diamond grades for cutting edge, we are able to provide superior performance for a vast variety of applications and cutting conditions.

■ Features and Applications

- With our new range of holders for 35˚ diamond shaped inserts and AW type chipbreakers, we are able to expand our applications to cover roughing to finishing processes.
  AW type chipbreakers provide stable roughing with reduced cutting force and increased clamp rigidity due to the new tool holder design
- Wide variety of dogbone inserts
  AW type chipbreakers, with their high rake design and newly designed dedicated tool holder, support a wide variety of tooling (straight, 15° angle, 45° angle)
- AW Type Chipbreaker for smooth chip control
- AG Type Chipbreaker for no chip adhesion on a mirror finish

■ AW Type Chipbreaker

- 35° Diamond Type
  
  VCGT220520N-AW (H1)
- Dogbone Insert
  
  MDE4R-AW (H1)
    MDE4R-AW (DA2200)

■ AG Type Chipbreaker

- 35° Diamond Type
  
  VCGT332NAG (H1)

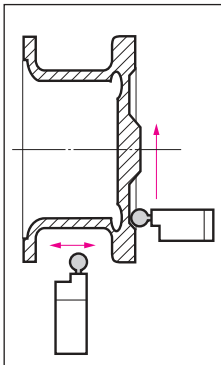
	DVQN R/L2525 M16

■ Application Examples

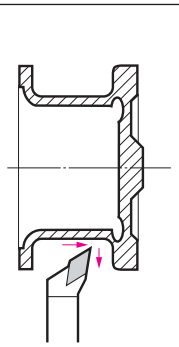


- Cutting Conditions

Tool Holder Cat. No.: GDEL2525-800W
Insert Cat. No.: MDE4R-AW
Grade: H1
n=6560 RPM
f=0.016 to 0.024 IPR
a_p=0.078" Wet

- Usage Results

Excellent chip control of AW breaker guarantees an increase in productivity.



- Cutting Conditions

Tool Holder Cat. No.: SVJCL2525M16
Insert Cat. No.: VCMT160412
Grade: DA1000
v_c=8280 RPM
f=0.014 IPR
a_p=0.008" Wet

- Usage Results

Will not fracture and provides over 17 times the tool life compared to competitors' PCDs.

Small Product Machining

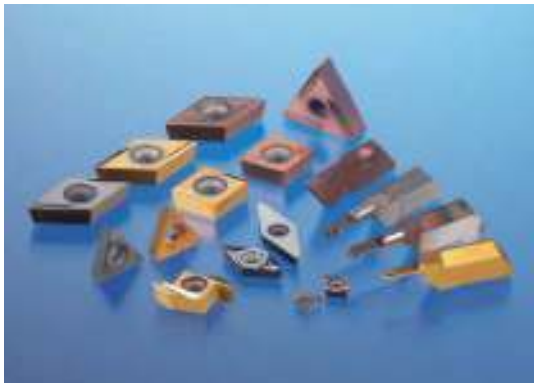
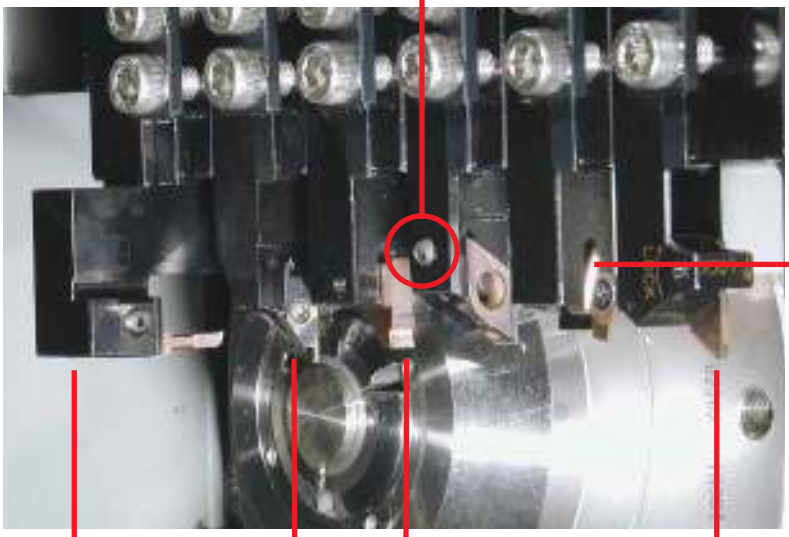
■ General Features

In 1984, Sumitomo Electric Hardmetal first released the MINI Tool Holder series for small product machining in small NC autolathes. Through these years of experience, new tool designs including our side lever lock tool holder were developed to meet various machining requirements such as back turning, profiling and cut-off; we continually strive to enhance the series.

■ From Carbide to PCD Grade Full Lineup



☞ D6 on



■ Special tools for small lathes to cover various types of machining

● Very Small Dia. Boring Bar CKB Type

Min. bore diameter ø1 to ø5mm

☞ E64

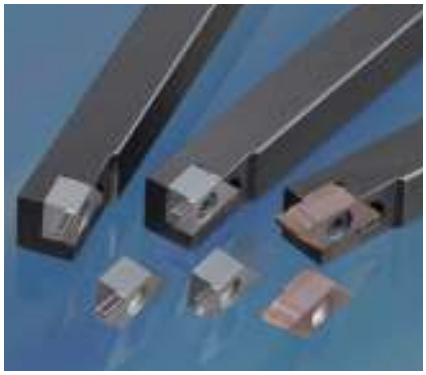
● Very Small Diameter Part Turning Tool SPB Type

Best suited for very small parts with diameter of less than ø10mm

☞ D8

● Plunging Tool SGW Type

Ideal for high-efficiency machining of long parts, eliminating chip control issues

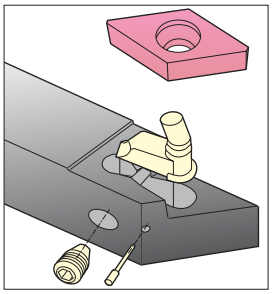


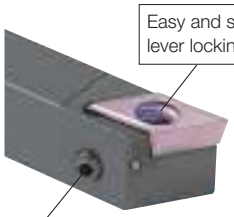
☞ D10

Small Product Machining

■ A wide selection of easy-to-use holders

●Back Clamp Tool Holder PC / PD Type





Inserts can be easily exchanged from the back

☞D22, D24

● Back-Turning Tool Holder SBT Type / PBT Type

Sharp cutting with good surface finish
Maximum machining step 8.0mm, width of cut 2.5mm

☞D11

● Cut-off Tool SCT Type

Inserts can be changed easily even from the back, simply by loosening the screw
Maximum cut-off diameters: ø5mm, ø12mm, ø16mm

☞F56

● Zero Offset Holders *Products with part number suffix "-X"

Tool compensation not required for small gang-type lathes

☞D17

● Twin Head Holder

Multi-functional Autolathe Tool
One holder performing 2 different operations

☞E10

● Round Shank Holder RS Type

External turning made possible with holder sleeves

☞D13

● Grooving Tool SSH Type

Internal coolant supply enables superb chip control, while the tough carbide body allows stable machining
Supports internal grooving of ø8mm up

☞F41

● Grooving Tool Holder GND Type

Lineup includes shanks for small lathes
Suitable for grooving at 1.25mm up

☞F4

Insert Grade Selection

In 1984, Sumitomo Electric Hardmetal first released the MINI Tool Holder series for small product machining in small NC autolathes. A full range of insert grades including AC530U and AC1030U as well as Cermet T1500A, Carbide BL130, SUMIBORON BN2000, and SUMIDIA DA1000 are available to meet a variety of machining requirements.
A high-precision grade, ACZ150, has been added to support a wide range of precision application requirements, from automotive to electronic component machining.

Chipbreaker Selection

■ Insert Series

● Insert Precision Selection Guide

	M Class	G Class	E Class
Insert Class			Height Tolerance	±0.005"	±0.005"	±0.001
Features	Side surfaces have a sintered finish	Side surfaces are ground	Side surfaces are ground Thickness tolerances are smaller than G-class inserts
Applications	Roughing to Light Cutting	Finishing to Light Cutting	High-precision to Finishing
Cat. No.	CCMT32.51ELU DCMT21.52ESU	CCGT32.51RFX DCGT32.50.5MESI(*)	CCET32.50.5RFX

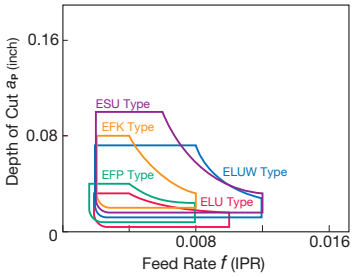
● Chipbreaker Selection

	Finishing to Light Cutting	Features
Parallel Type	FX Type 	Best suited for general-purpose O.D. finishing with larger depths of cut.
Wide Type	FYS Type  FY Type 	Burrs are less likely with undercutting. Chatter is less likely with external and face machining.
Molded Type	EFC Type  MESI Type 	3D chipbreaker with good chip control and sharp cutting edge. The FC type is for fine finishing, and the SI type for varying depths of cut.
	NAG Type 	Breaker for aluminum alloy machining. Sharp edge and low adhesion.

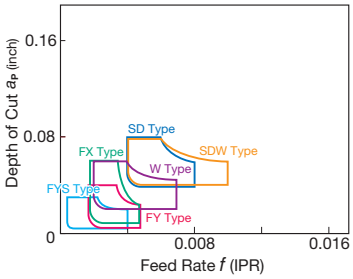
(*) A catalogue number with a feed direction symbol prefixed with "M" means that the product has a nose radius with negative tolerance.

■ Application Range of Chipbreakers for Finishing to Light Cutting

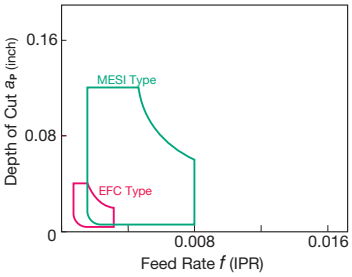
● M Class Finishing to Light Cutting



● G Class Ground Type



● G Class Molded Chipbreaker

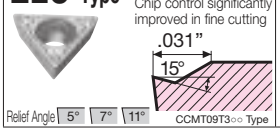


■ Chipbreakers for Finishing to Light Cutting

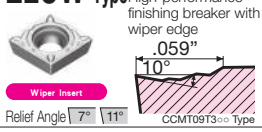
Dimensions (mm)

Positive Type M Class

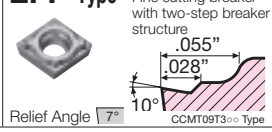
ELU Type P M K N S — Chip control significantly improved in fine cutting



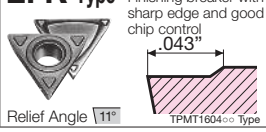
ELUW Type P M K N S — High-performance finishing breaker with wiper edge



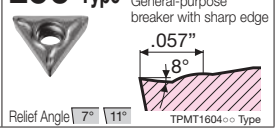
EFP Type P M K N S — Fine cutting breaker with two-step breaker structure



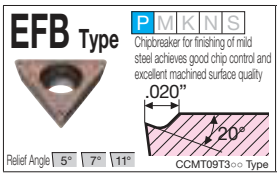
EFK Type P M K N S — Finishing breaker with sharp edge and good chip control



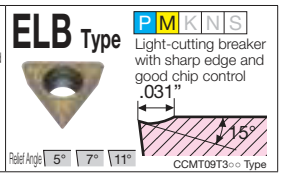
ESU Type P M K N S — General-purpose breaker with sharp edge



EFB Type P M K N S — Chipbreaker for finishing of mild steel achieves good chip control and excellent machined surface quality

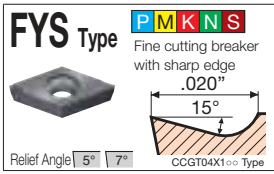


ELB Type P M K N S — Light-cutting breaker with sharp edge and good chip control

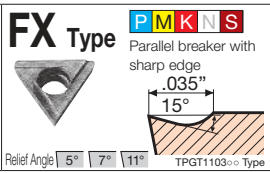


Positive Type G Class Ground Chipbreaker

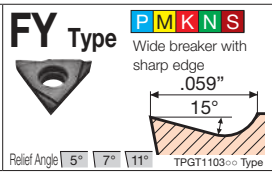
FYS Type P M K N S — Fine cutting breaker with sharp edge



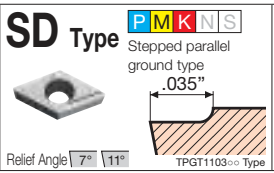
FX Type P M K N S — Parallel breaker with sharp edge



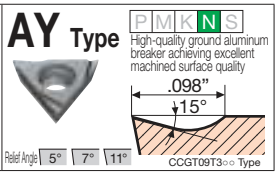
FY Type P M K N S — Wide breaker with sharp edge



SD Type P M K N S — Stepped parallel ground type

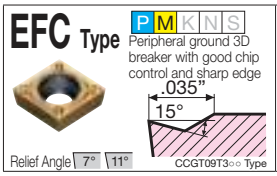


AY Type P M K N S — High-quality ground aluminum breaker achieving excellent machined surface quality

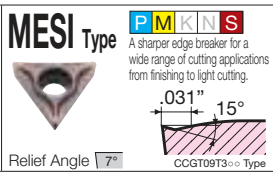


Positive Type G Class

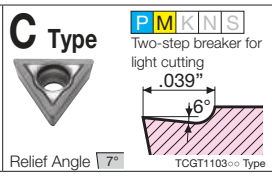
EFC Type P M K N S — Peripheral ground 3D breaker with good chip control and sharp edge



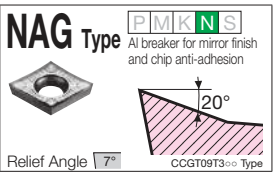
MESI Type P M K N S — A sharper edge breaker for a wide range of cutting applications from finishing to light cutting.



C Type P M K N S — Two-step breaker for light cutting

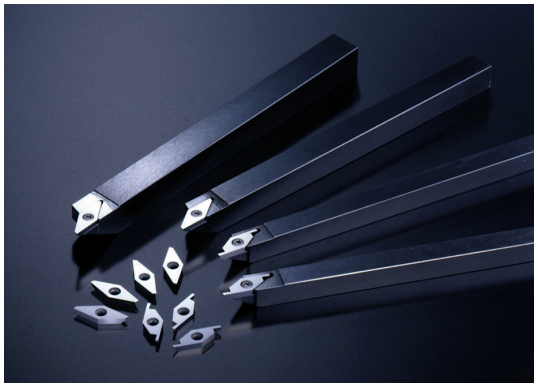


NAG Type P M K N S — Al breaker for mirror finish and chip anti-adhesion



Applicable Part Material: P Steel M Stainless Steel K Cast Iron N Non-Ferrous Metal S Exotic Alloy

SPB Type



■ Features

- High rigidity type tools expanded for gang-type NC lathes
- Inserts for various applications can be used on a single holder
- Can also be used on turret-type toolposts
- Uncoated blank inserts are stocked so cutting edges can be ground as required.
- BL130 has wear resistance similar to coated grades and sharpness similar to uncoated grades.
- Ultra-fine grained carbide grade F1, typically used for brazed tools, is now available for indexable inserts

■ Applicable Grades

Applicable Part Material / Insert Grade	General Steel / SK Material	Stainless Steel: Austenitic	Stainless Steel: Martensitic Ferritic	Brass, Aluminum Alloy

Shank Tolerance of SBT Type / PBT Type

A positive tolerance (0.1 - 0.3) is applied to the shank height (H) to prevent the cutting edge from interfering with the toolpost.

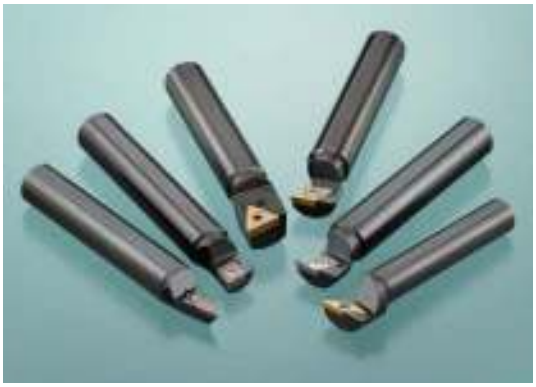
RS-SCL Type



■ Features of Round Shank Holders

- Shank diameters from ø14 to ø25 mm are in stock. Holders can be fitted on various manufacturers' sleeve toolposts.
- Bars can be mounted from the rear of the sleeve toolpost to increase the tooling range.

Boring Tools Series

■ General Features

Since its launch in 1976, our industry leading Boring Bar Series with its steel/carbide shank holders and high rigidity heads has since included the popular Small Diameter Boring Bars and now the SumiTurn X-Bars with anti-vibration mechanism, optimized insert grades and chipbreakers.

■ Features of Boring Bars

- Applicable to a wide range of applications such as Stop-Boring/Bottom Facing/Through-Boring/Profiling
- Min. machining diameter: ø1mm for CKB Type, ø5mm for C-SCLC Type
- Anti-vibration boring bar SumiTurn X-Bar
- Carbide short shank type usable on turret lathes without shortening (C16M-STUP, C20M-STUP Types)
- Wide selection of insert grades and chipbreakers available for various work materials

■ Steel Shank Type with Anti-Vibration Mechanism

SumiTurn X-Bar

- Higher anti-chatter capability for effective rough boring of deep holes
- Achieves low-cost boring of large diameters and deep holes, with ø32mm shank now in stock
- Excellent chip evacuation with double chip pockets
- Bars with internal coolant hole are also in stock
- Negative insert holders (shank dia. ø25 to ø50mm) are now in stock

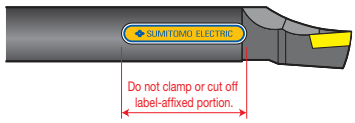
■ Shank Material Selection

SumiTurn X-Bar

Application \ Shank Material		Steel	Steel with Anti-Vibration Mechanism	Carbide
General Steel	Shallow Holes (L/D < 3)	⊙		
	Deep Boring (L/D > 3)		⊙	⊙
High efficiency boring with wiper insert			●	⊙
Hardened Steel			—	⊙
High-precision Machining				⊙

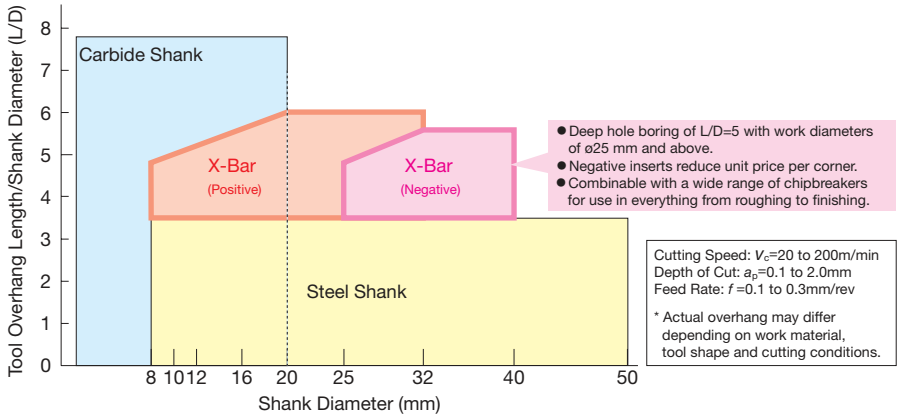
⊙1st Recommendation ● 2nd Recommendation

⚠ Precautions for Clamping Position on Steel Shank with Anti-Vibration Mechanism



Clamping a shank on the " SUMITOMO ELECTRIC " label-affixed portion may disturb normal functioning (due to built-in Anti-Vibration mechanism).
Therefore, minimum tool overhang length is kept to 3.5D (shank diameter x 3.5). This is a dedicated turning tool. It cannot be used as a rotating tool.

■ Application Range by Shank Type

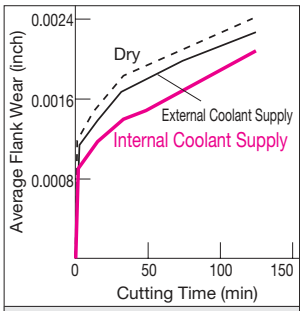


- Deep hole boring of L/D=5 with work diameters of ø25 mm and above.
- Negative inserts reduce unit price per corner.
- Combinable with a wide range of chipbreakers for use in everything from roughing to finishing.

Cutting Speed: V_c=20 to 200m/min
Depth of Cut: a_p=0.1 to 2.0mm
Feed Rate: f =0.1 to 0.3mm/rev

* Actual overhang may differ depending on work material, tool shape and cutting conditions.

■ Wear Comparison by Coolant Supply Method



Work Material: SCM435, Insert: FX Breaker (Grade AC510U)
Cutting Conditions: v_c=492 SFM, f=0.004 IPR, a_p=0.012"

■ Recommended Grades

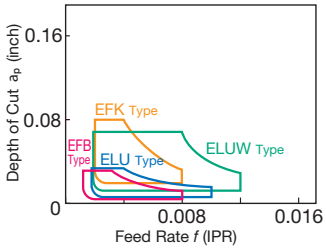
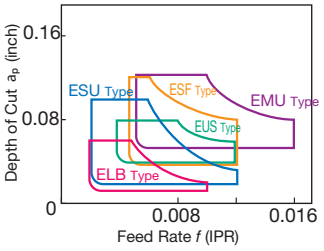
◎ 1st Recommendation ● 2nd Recommendation

■ Recommended Chipbreakers

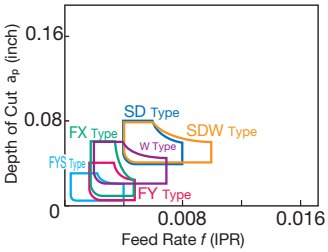
● Class M Finishing to Light Cutting



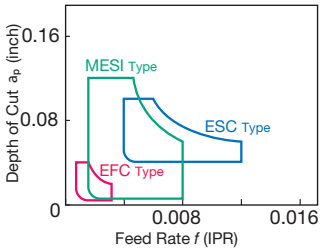
● M Class Light to Medium Cutting



● Class G Ground Chipbreakers



● G Class Molded Chipbreakers



Twin Head Holder

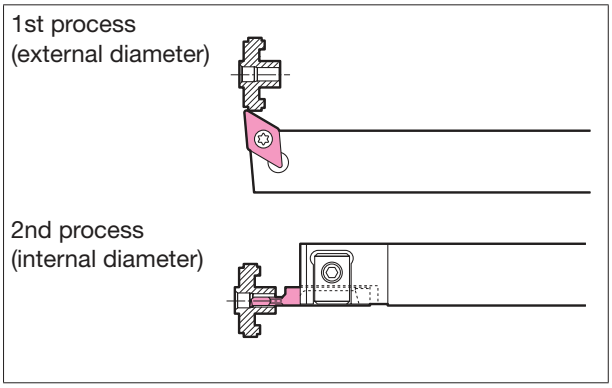
TWIN HEAD

■ Features

- ●Having one holder that performs two operations is equivalent to mounting an additional tool on the drill sleeve toolpost.
- ●External turning possible with the aid of a drill sleeve.
- ●2 holder configurations, internal + external and internal + internal, are standard stocked items.
- ●Centre height difference of the 2 cutting edges is below 40μm, which is good for high precision machining.

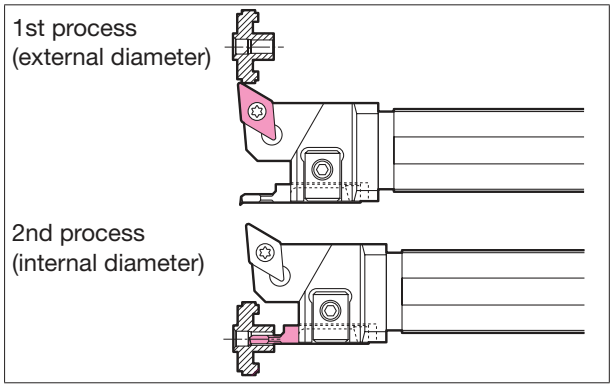
■ Advantages of the Twin Head Holder

● Conventional Tool



· 2 different operations requiring 2 separate tools.

● Twin Head Holder



· A single tool performing 2 different operations.

· Toolpost moving time can also be reduced.

■ Features

- Economical two-cornered insert
- Depth of cut 5D (5 times the shank diameter)
- Usable at any desired overhang
- Shank size = min. bore diameter for easy selection (Available from ø2 mm to ø5 mm in 0.5 mm increments)
- KBMX Type cutting edge used. Versions with no chipbreaker also available in stock

N·m Recommended Tightening Torque (N·m)

■ Features

- Achieves the minimum bore diameter of ø2.5mm in boring of hardened steel
- Achieves high-precision cutting edge positioning thanks to the newly developed clamp mechanism
- Expands the range of small hole boring to achieve more high-efficiency machining requiring no grinding
- BSME Type (Brazed Type)
  Can be used with work diameters from ø2.5 to 5.0mm
- SEXC Type (Indexable Insert Type)
  Can be used with work diameters from ø4.0 to 6.0mm

Expansion | Carbide (Coolant Hole) | CBN

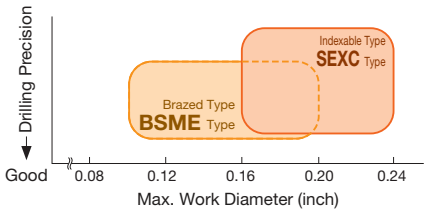
Application Range



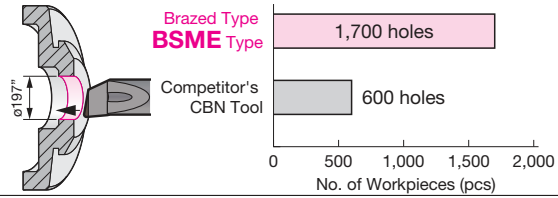
Recommended Cutting Conditions

Spindle Speed *n*	Above 2,000 RPM	May cause chattering or chipping at the cutting edge in low-speed machining.
Depth of Cut a_p	0.0004" to 0.006"	Excessive depth of cut causes deformation of the tool, which consequently leads to deterioration of dimensional tolerance.
Feed Rate *f*	0.0004 to 0.004 IPR	–

Application Examples

Hardened Alloy Steel Valve Component — BSME

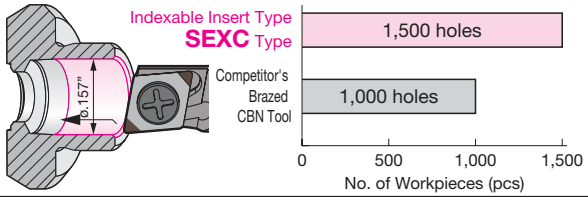
The BSME type provides stable machining and a tool life that is over 2 times longer than our competitors' CBN tools.



Work Material: Hardened Alloy Steel Valve Component (Automotive Component)
Tool: BSME R50020D2S6 Grade: BN2000
Cutting Conditions: v_c = 387 SFM (7,500 RPM), *f* = 0.0008 IPR, a_p = 0.004" Dry

Bearing Steel: Small Automotive Component — SEXC

The SEXC type provides drastically reduced tool costs and a tool life that is 1.5 times longer than our competitors' brazed CBN tools.



Work Material: Bearing Steel Small Automotive Component (60HRC)
Holder: E06D2-SEXC R/L03-04P Insert: 2NU-ECXA 030X02LF (BN2000)
Cutting Conditions: v_c = 164 SFM (4,000 RPM), *f* = 0.008 IPR, a_p = 0.0008" Wet

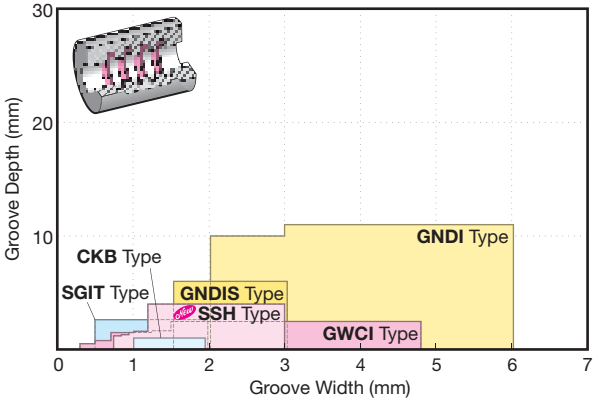
Internal Grooving



■ Face Grooving Tools

Note: * mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape ( ): indicates no. of cutting edges	Groove Depth* / Groove Width*	Work Diameter (mm)	Features
Very Small Diameter	**CKB**	→F39		●		(1)	Depth* 4.0 / Width* 1.5–3.0	ø6 to	· Face grooving for small lathes
For General Grooves to Deep Grooves	**GNDF**	→F25		●		(2)	Depth* 23 / Width* 3.0–6.0	ø35 to ø1,000	· High-rigidity design reduces vibration.
For General Grooves to Deep Grooves	**GNDFS** Made-to-order item	→F27		●		Enables Traverse Cutting	Depth* 20 / Width* 6.0–8.0	ø70 to	· L-shape (horizontal) type · For wide grooves

■ Internal Grooving Tools

* mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape ( ): indicates no. of cutting edges	Groove Depth* / Groove Width*	Min. bore diameter (mm)	Features
For Small Diameter Grooves	**CKB**	→F40		●		(1)	Depth* 1.0 / Width* 1.0–2.0	ø4	· Very small diameter grooving · High clamping force · Wide variety of tool holders
For Small Diameter Grooves	**SGIT**	→F43	●			(3)	Depth* 3.2 / Width* 0.5–2.0	ø10	· 3-cornered type
For Small Diameter Grooves	**SSH** New	→ F41	●			(1) Enables Traverse Cutting	Depth* 4.0 / Width* 0.74–3.0	ø8	· Internal coolant supply specification for outstanding chip evacuation · Wide variety of grooving widths · Tough carbide body for stable machining
For Shallow Grooves	**GWCI**	→F34	●			(3) (Standard, with Chipbreaker)	Depth* 2.5 / Width* 0.33–4.8	ø35	· Using same inserts as GWC type holders · Inserts with chipbreakers now in stock
For General Grooves to Deep Grooves	**GNDIS**	→F30		●		(2) Enables Traverse Cutting	Depth* 6.6 / Width* 2.0–3.0	ø14	· Supports machining with minimum bore diameter from ø14
For General Grooves to Deep Grooves	**GNDI**	→F28		●		(2) Enables Traverse Cutting	Depth* 11.0 / Width* 2.0–6.0	ø32	· High-rigidity design reduces vibration.

■ Necking Tools

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape ( ): indicates no. of cutting edges	Groove Depth* / Groove Width*	Work Diameter (mm)	Features
Face Undercutting	**GNDN**	→F24		●		(2)	Depth* 4.0 / Width* 2.0–6.0	ø20 to	· Necking at corners possible

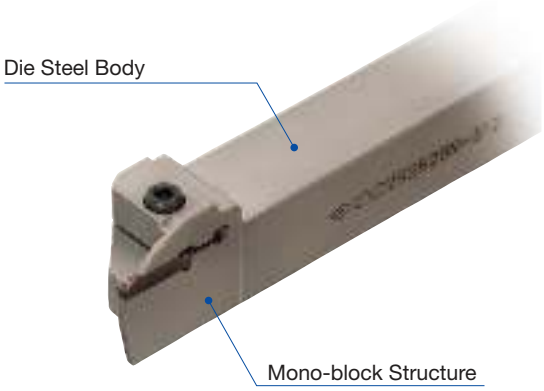
■ Features

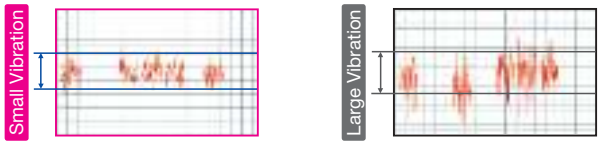
- **Wide application range**
  Applicable for grooving, traverse cutting, profiling, necking, facing and internal boring.
- **Stable tool life**
  A variety of chipbreakers improve chip control in various applications. Prevents sudden breakages due to chip clogging.
- **Achieving high efficiency machining with reduced chattering**
  The mono-block structure and die steel body reduce vibration during machining around 30% compared to conventional tools
- **Higher edge width precision even with unground inserts**
  High-precision sintering technology achieves cutting edge width precision of ±0.03mm for widths from 1.25 to 6.0mm (front cutting edge angle of 0° or 5°)

■ Cutting Performance

Reduce Chattering

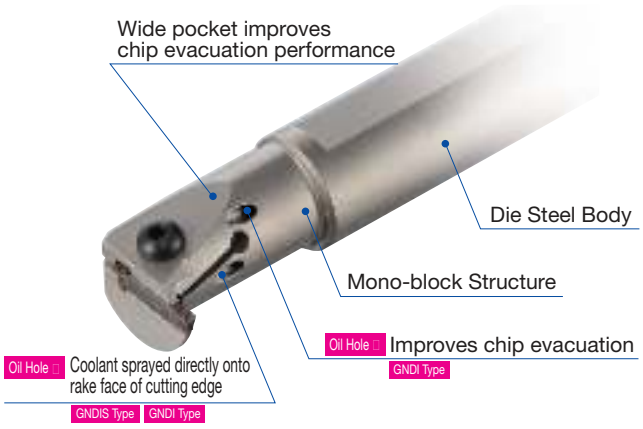
High rigidity design reduces chattering by up to 30% as compared to conventional tools.

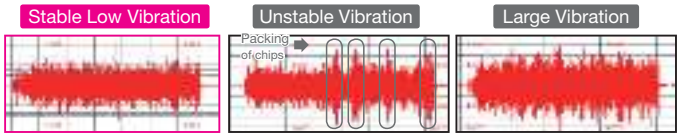




Part Material: Structural Steel
Holder: GNDL R2525M-220 Insert: GCM N2002-GG
Cutting Conditions: v_c = 330 SFM, f = 0.0039 IPR, a_p = 0.79" Wet

Both high rigidity and good chip evacuation performance Internal



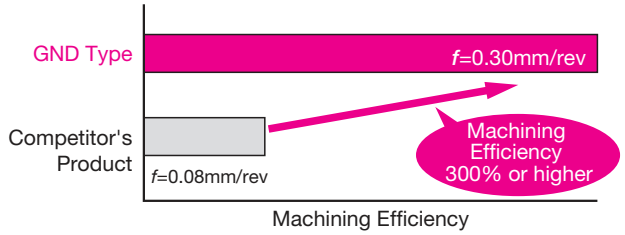


Part Material: Structural Steel
Holder: GNDI R2532-T306 Insert: GCM N3002-GG
Cutting Conditions: v_c = 330 SFM, f = 0.0019 IPR, a_p = 0.118" Wet

■ Application Examples

Substantially improved machining efficiency

High-rigidity holder enables machining at high feed rates.



Part Material: Cr–Mo Alloy Steel
Holder: GNDL R2525M-320 Insert: GCM N3002-GG (AC530U)
Cutting Conditions: v_c=430 SFM, f =0.012 IPR Wet

Long, stable tool life ensures reliable functionality even on automatic production lines!

Reduction of chattering prevents unexpected breakage.

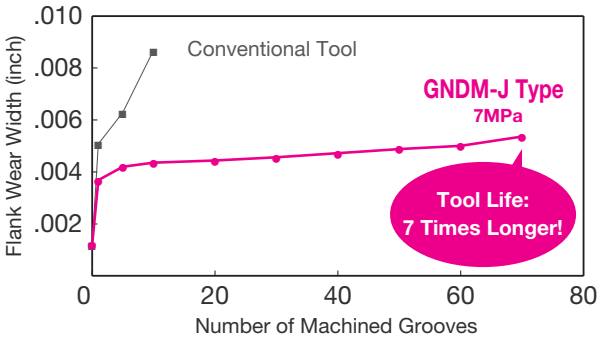
Part Material: Medium Carbon Steel
Holder: GNDM L2525M-618 Insert: GCM N6030-RG (AC530U)
Cutting Conditions: v_c=430 SFM, f =0.012 IPR Wet

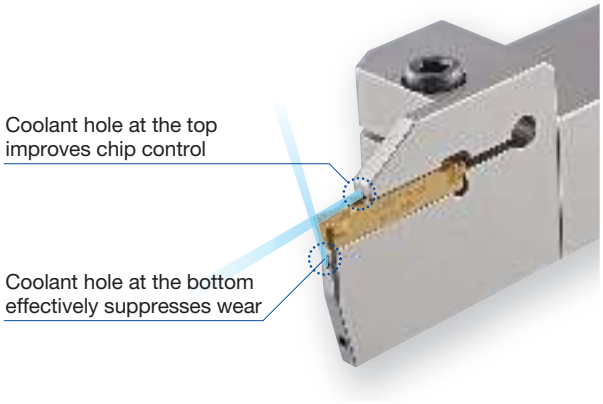
■ Internal Coolant Holder GNDM-J Type / GNDL-J Type

New

- Series expansion of SEC-Grooving Tool GND Type with internal coolant holder series
- Available seat sizes / grooving widths from .079" (2.0) to .236" (6.0mm)
- Effective coolant supply to the cutting edge during grooving, achieving both high-efficiency high-speed machining and longer insert tool life
- Improved chip control through direct coolant supply around the cutting edge

- Wear Resistance





- Chip control

Coolant Pressure: 7MPa

Coolant Pressure: 1MPa

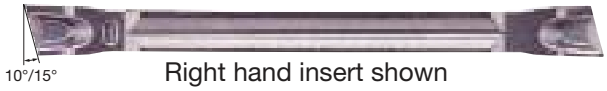
External Coolant Supply

Part Material: Titanium Alloy Holder: GNDM R2525K-312J Insert: GCMN3002-GG (AC530U) Cutting Conditions: v_c = 200 SFM, f = 0.0039 IPR, a_p = .197" Wet

■ CF Type Chipbreakers for Cut-Off Machining

New

- Chipbreakers with front cutting edge angles 10°/15° for cut-off machining now available
- Asymmetric breaker design demonstrates outstanding chip control even on inserts with front cutting edge angles, where chip control is typically difficult



Right hand insert shown

GCMR20003-CF-10

280: 280mm (11.024")

Insert Nomenclature (METRIC)

GCM N 30 02 -GG -AC530U

#1-3 #4 #5 #6 #7 #8

#1-3 Series Name
#1 G: Grooving Insert
#2 C: 7° Relief Angle
#3 M: Molded Tolerance

#4 Handedness
R: Right Handed
L: Left Handed
N: Neutral

#5 Seat Size & Groove Width		
#	Seat	Groove Width
125	1.25	1.25 mm
15	1.5	1.5 mm
20	2	2.0 mm
30	3	3.0 mm
40	4	4.0 mm
50	5	5.0 mm
60	6	6.0 mm
70	7	7.0 mm
80	8	8.0 mm

#6 Corner Radius *10
02 =0.2mm
04 =0.4mm
08 =0.8mm

#7 Chipbreaker
GG: Std. Feed Deep Groove
GL: Low Feed Deep Groove
MG: Std. Feed Traverse
ML: Low Feed Traverse
RG: Full Radius Profiling
RN: For profiling with undercut
GF: Low Cutting Force
GA: Non-ferrous grooving
CG: General Cutoff
CF: High Shear Cutoff

#8: Grade
AC520U: Universal Grade for most materials
AC530U: Universal Grade for most materials
AC1030U: Grade for precision machining
AC830P: Tough CVD Grade for steels
AC425K: CVD Grade for Cast and Ductile Irons
T2500A: finishing of steels and stainless steels
H10: for non-ferrous materials

GND Type - Recommended Cutting Conditions

Grooving Width (inch/ mm)	Recommended Cutting Condition	
	Grooving / Cut-Off (Necking)	Traverse Cutting
.049 / 1.25		—
.059 / 1.50		—
.079 / 2.0		.118 / 3.0		.157 / 4.0		.197 / 5.0		.236 / 6.0		.275 / 7.0		.315 / 8.0		
For face grooving, use cutting conditions closer to the lower limit of the recommended cutting conditions to ensure that chips are long.
In cut-off applications, reduce the feed rate to around 30% to 50% near the center of the workpiece.
As there is less space for chip evacuation when machining internal diameters (particularly small bore diameters), ML/GL/GF Type chipbreakers are recommended.
Modifications to inserts and holders are required to perform machining such as radius grooving when using the RG type chipbreaker with the GNDF type holder for f

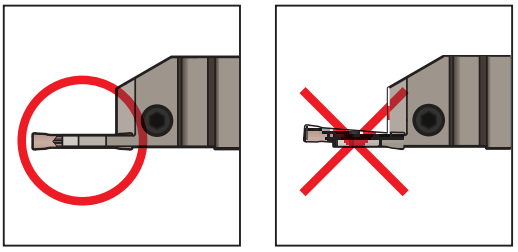
Recommended Cutting Conditions F10

Precautions for Grooving Tool Holders GND Type

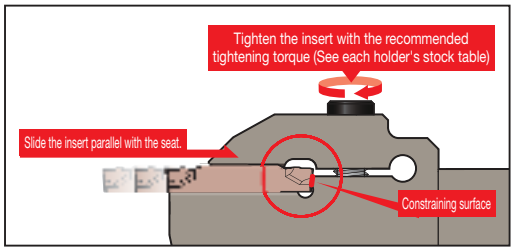
■ Insert Mounting Precautions

1.Remove any dust and oil from the insert seat before attaching the insert.
2. If there are scratches or burrs on the insert seat, scrape them away.
3. Mount the insert by sliding it parallel to the seat.
4. Clamp the insert with the opposite side (holder side) of the cutting edge secured on the constraining surface.
5. Tighten the insert with the recommended tightening torque. If the insert is tightened with excessive torque, it may be damaged, leading to injury.

Mount the insert parallel to the seat



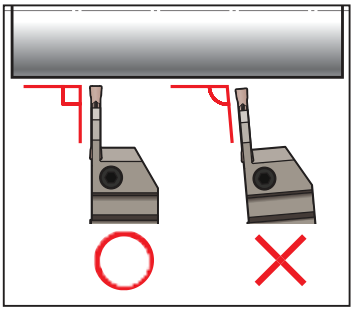
Be sure to push the insert to the end



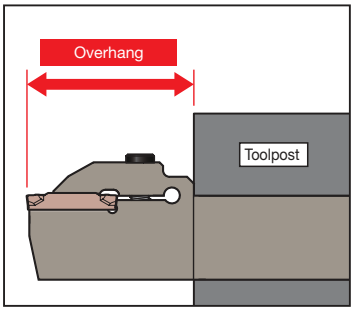
■ Precautions when Mounting Holders

1. Remove any dust and oil from the toolpost before setting the holder.
2. If there are scratches or burrs on the toolpost, scrape them away.
3. Place the holder so that the insert is perpendicular to the workpiece. Failure to do so may bend the machined surface or cause chattering.
4. The overhang of the holder should be as short as possible.
5. When grooving or traverse cutting, adjust the center height of the cutting edge to as close to ±0mm as possible. (Within ±0.1mm is recommended.) Incorrect center height adjustment may cause chattering. In cut-off applications, adjust the center height of the cutting edge to a value from 0 to +0.2mm. A lower center height will result in a larger pip at the center.

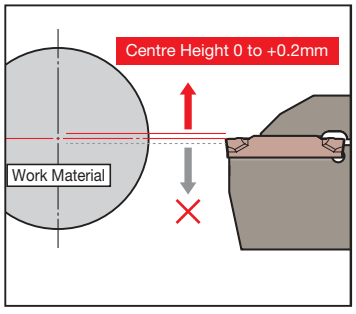
Mount the holder perpendicular to the workpiece.



The overhang should be short.



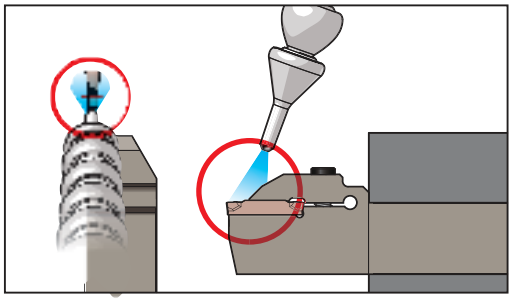
Center height adjustment in cut-off applications



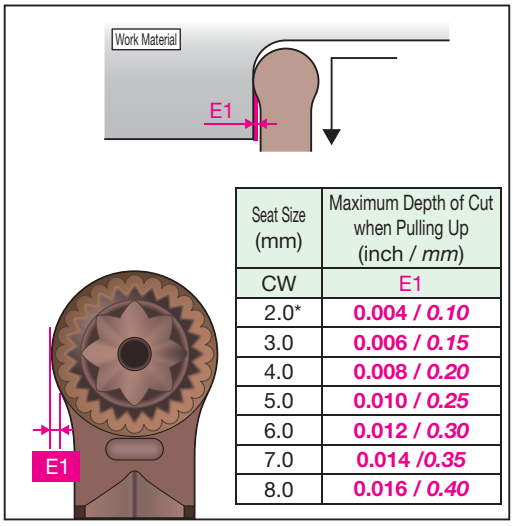
■ Precautions when Mounting the Oil Supply Nozzle

1. Set the oil supply nozzle so that coolant can be supplied from the top of the upper clamp unit.

Supply coolant to the top of the upper clamp unit



■ Depth of Cut when Pulling Up with RG/RN Type Chipbreakers



Seat Size (mm)	Maximum Depth of Cut when Pulling Up (inch / *mm*)
CW	E1
2.0*	**0.004 / *0.10***
3.0	**0.006 / *0.15***
4.0	**0.008 / *0.20***
5.0	**0.010 / *0.25***
6.0	**0.012 / *0.30***
7.0	**0.014 /*0.35***
8.0	**0.016 / *0.40***

*: CW = 2.0 is RN type chipbreakers only

External

* For traverse cutting (groove expansion), use a multifunctional insert for profiling.

External Multi-Function Clamp-on (Grooving, Traverse Cutting and Profiling)

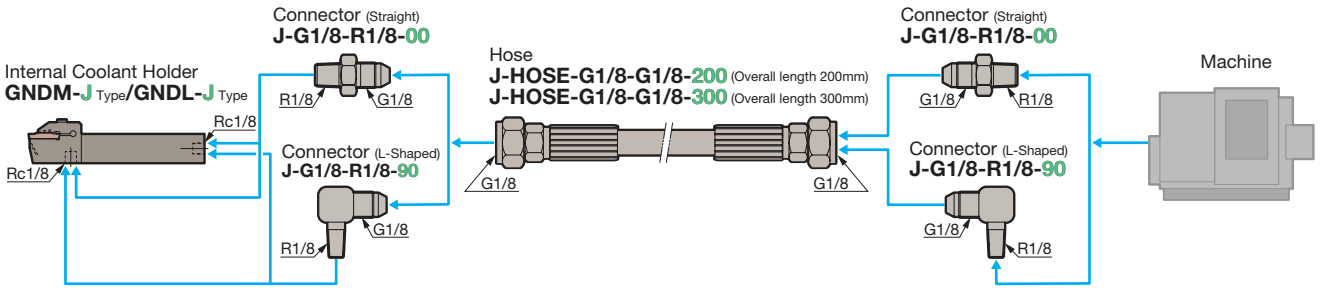
GND-J Type - Parts & Connection Methods

Piping Method for Hoses and Connectors



· Apply sealant such as commercial sealing tape to the piping connection parts.

· GNDM-J/GNDL-J Type holders have a plug (XP02) mounted on the holder back end at shipping. (See Fig. 1)
When piping from the holder back end, mount a plug (XP02) on the bottom of the holder for use. (See Fig. 2)

N·m Recommended Tightening Torque (N·m)

●: USA Stocked Item

GND Type - Polygon Shank Style

Features and Benefits

- ISO Polygon shank holder
- Economic cassettes
- Compact and stable construction
- Repeatability of ± 2 µm interface
- Internal coolant supply directly from the holder to the cutting edge

Product Range - Holders

Application	Series	Shape	Grooving Width (mm) 2	3	4	5	6	Grooving Depth (mm)
External Grooving	PSC_0M00R/L Straight		2	3				12
					4	5	6	18
	PSC_0M90R/L L-Style		2	3				12
					4	5	6	18

Note: 2mm Grooving width - please use only for grooving not for turning!

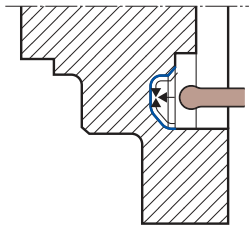
GND Type - Polygon Shank Style

Application Examples

4120 Steel, Automotive Part, Face Profiling

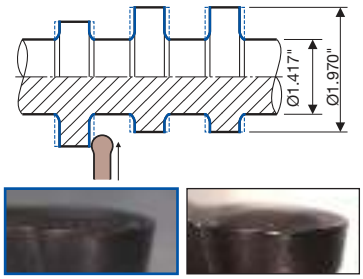


Target:
- Higher rigidity
- Vibration reduction
- Chip control
- Wear resistance performance

Holder: GNDF R2525M 423-125
Insert: GCM N4020 RG
Grooving width: 0.16“ (4mm)
Cutting conditions: v_c= 650 SFM
f = .006 IPR
wet

Stable machining free of vibration!
Excellent chip control using the GND type.

1053 Steel, Cam Shaft Grooving / Finishing (Contin. to Heavy Interrupted)

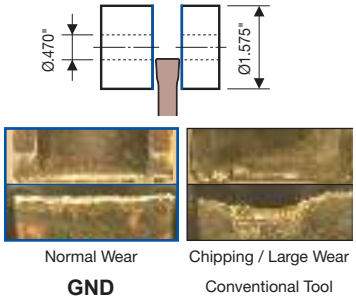


Target:
- Higher rigidity
- Vibration reduction
- Chip control
- Fracture resistance

Holder: GNDM L2525M 618
Insert: GCM N6030 RG
Grooving width: 0.24“ (6mm)
Cutting conditions: v_c= 430 SFM
f = .014 IPR
wet

Stable machining free of vibration!
Excellent fracture resistance
Stable chip control

1048 Steel, Machine Part, Cut-Off

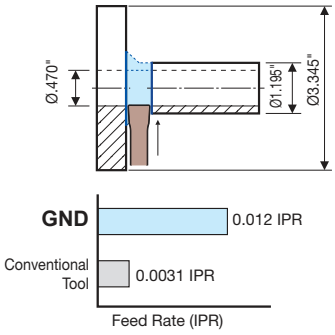


Target:
- Higher rigidity
- Vibration reduction
- Fracture resistance

Holder: GNDL R2525M 320
Insert: GCM N3002 GG
Grooving width: 0.12“ (3mm)
Cutting conditions: n = 1600min^{-1}
v_c= 650 SFM
f = .002 IPR
wet

Stable machining free of vibration!
Excellent fracture resistance
Stable fracture resistance

4137 Steel, Crank, Cut-Off

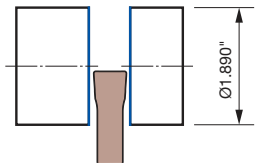


Target:
- Higher rigidity
- Vibration reduction
- Chip control

Holder: GNDL R2525M 320
Insert: GCM N3002 GG
Grooving width: 0.12“ (3mm)
Cutting conditions: v_c= 380 SFM
f = .012 IPR
wet

Improved efficiency
Stable machining free of vibration!
Stable chip control

Hardened Steel (45-48HRC), Machine Part, Cut-Off

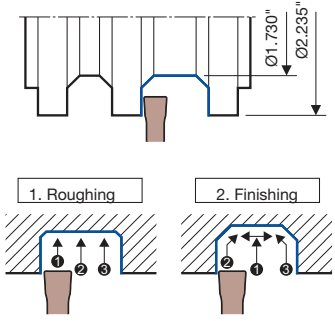


Target:
- Higher rigidity
- Vibration reduction
- Chip control

Holder: GNDL R2525M 425
Insert: GCM N4002 GG
Grooving width: .16“ (4mm)
Cutting conditions: v_c= 170 SFM
f = .0012 IPR
wet

Stable machining free of vibration!
Excellent chip control using the GND type.
No more unexpected breakage!

5120 Steel, Gear Shaft, Grooving / Pocketing



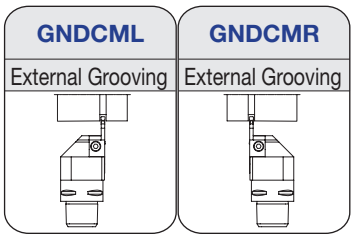
Target:
- Higher rigidity
- Vibration reduction
- Chip control

Holder: GNDM R2020K 518
Insert: GCM N5008 MG
Grooving width: .20“ (5mm)
Cutting conditions: v_c= 500 SFM
f = .004 IPR
wet

Stable machining free of vibration!
Excellent chip control using the GND type.

GND Type - Polygon Shank Style

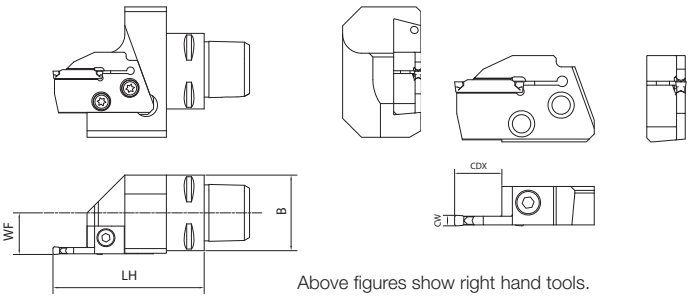
External Multi-Purpose Type (Grooving, Turning, Profiling)



Use for multi-purpose or profiling insert for turning (wide grooves).

Right handed Cassette goes with right handed holder

Left handed Cassette goes with left handed holder



Above figures show right hand tools.

Combine the insert with a holder such that the Seat Sze matches. Refer to F11 for applicable inserts

Combine the insert with a holder such that the width of cut (CW) matches. Not usable with GNDIS type holders. Recommended Cutting Conditions ☞ F10

★: Worldwide Warehouse Item ●: USA Stocked Item

Grooving Tool GND Type Special Grooving Insert Request Form

Applicable Tool Holders (Width of Cut 2 to 6mm)
External Diameter Machining: GNDS Type, GNDM Type, GNDMS Type, GNDL Type, GNDLS Type, GNDCM Type
Internal Diameter Machining: GNDI Type *GNDIS types cannot be used as the insert shape is different
Facing: GNDF Type , GNDFS Type

Special inserts with ground chipbreaker (customized width of cut and insert nose radius) can be made-to-order. To order, fill out the form below (indicate preference by circling the item or specify dimensions), and send it to a Sumitomo Sales Representative or distributor. (Make a copy of this form.) For grooving inserts with shape, width of cut or grade other than those listed below, contact Sumitomo Electric Carbide, Inc. USA Headquarters.

Your Company / Contact Information (Phone / Fax / Address, etc.)

Shape	Items	Description
	Width of Cut CW (mm) (2.00 to 6.59mm)	
	Nose Radius RER (mm)	
	Nose Radius REL (mm)	
	Grade (Select from right)*1	AC530U / AC520U / EH520 / H10 / KH03
	Grooving Depth CDX (mm)*2	

*1 If H10 is selected as the grade, the cutting edge will have a sharp edge.
*2 Set the breaker width based on CDX. The actual groove depth can only be less than or equal to the maximum groove depth configurable by each holder.

Form instructions

1. The applicable standard holder depends on the width of cut. Refer to the chart on the right for manufacturable widths of cut and nose radius range for facing. (If using a nose radius exceeding this for facing, modification is required to prevent the holder from interfering with the part material.)
2. The nose radius maximum value for external/internal diameter machining is 1/2 the width of cut.
3. Width of cut (CW) tolerance is ±0.025mm when manufactured.
4. WF dimensions for each holder are the CWS value for the applicable holder standard insert width of cut as follows.
   (Standard holder dimension WF) + (WF - CWS) / 2
5. For inch widths of cut, inserts can also be supplied partially unground.

Contact your sales representative for details.

Width of Cut CW (Nominal Value)	Applicable Standard Holder	Nose radius (RER, REL) maximum value when used for facing (standard holder applicable)
2.00 to 2.59mm	2mm Width Holder	0.2mm
2.60 to 3.59mm	3mm Width Holder	0.4mm
3.60 to 4.59mm	4mm Width Holder	0.8mm
4.60 to 5.59mm	5mm Width Holder	
5.60 to 6.59mm	6mm Width Holder

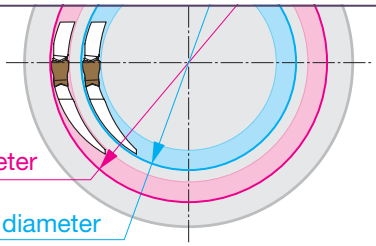
★: Worldwide Warehouse Item

Combine the insert with a holder such that the width of cut (CW) matches. Not usable with GNDIS type holders. Recommended Cutting Conditions F10

Key Points for Facing

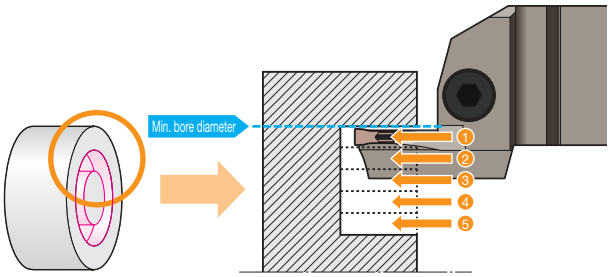
Holder Selection



· Select a holder with which the outer diameter of the first groove to be machined is between the maximum and minimum grooving diameters of the holder.
· If the machining start point is within the effective work diameter range, the diameter will not be limited for subsequent passes.

Precautions for Groove Expansion

Recommended Chipbreakers MG ML GG GL GF GA



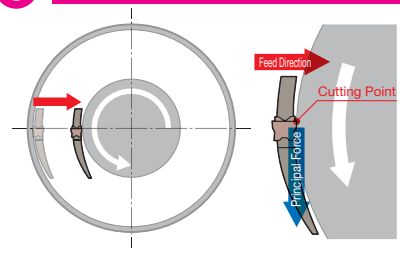
· If the first groove is within the effective work diameter range during groove expansion via plunging, the diameter will not be limited for subsequent passes.

Precautions for Traverse Cutting

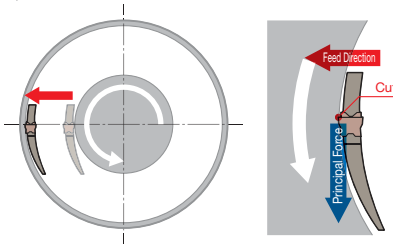
Recommended Chipbreakers MG ML RN

Considering the rigidity of the holder, we recommend machining from the outside to the inside.

○ External → Internal



× Internal → External



If machining is performed from the inner to the outer diameter, the wall thickness remaining on the principal force side will become thinner, reducing the rigidity of the holder.

· If the machining start point for traverse face cutting operation is within the effective work diameter range, the work diameter will not be limited for subsequent passes.
· Select the lower limit of the recommended cutting conditions for the chipbreaker and lengthen the chips for evacuation. (In face grooving, broken chips easily get stuck in grooves, which causes problems.)
· When breaking chips, step feed is required.

Key Points in Internal Diameter Machining

Precautions for Internal Diameter Machining

Recommended Chipbreakers ML GL GF

If the prepared hole diameter is small, use an ML type or GL type low-feed chipbreaker, both of which reduce chip curl diameter, to ensure adequate chip evacuation.

GCMN3004-MG

GCMN3002-ML

GCMN3002-GG

GCMN3002-GL

Part Material: Structural Steel Prepared Hole Diameter: ø25mm Holder: GNDI R2532-T306 Insert: GCM N300○-○○
Cutting Conditions: v_c = 330 SFM, f = 0.004 IPR, a_p = 0.118" Wet

Internal Diameter Machining

External Machining

GCMN3002-GG

⚠ Chip shapes differ between internal and external machining even under the same cutting conditions.

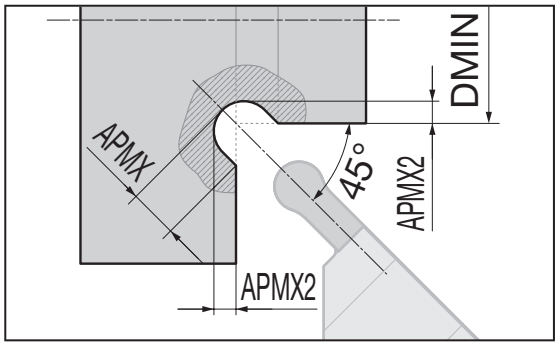
Part Material: Structural Steel
Holder: GNDL R2525M-320, Insert: GCM N3002-GG
Cutting Conditions: v_c = 330 SFM, f = 0.004 IPR, a_p = .197" Wet

Key Points for Necking

Precautions for Necking

Recommended Chipbreaker RN

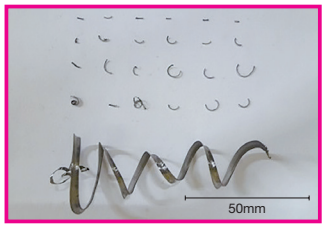
Distance from Work Material to Necking Depth

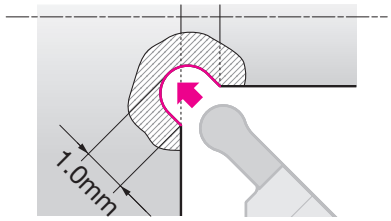


Seat Size CW (mm)	Necking Depth APMX (inch/*mm*)	Distance from Work Material to Necking Depth APMX2 (inch/*mm*)
2	.059 / *1.5*	.025 / *0.64*
3	.079 / *2.0*	.030 / *0.79*
4	.118 / *3.0*	.050 / *1.29*
5	.138 / *3.5*	.055 / *1.44*
6	.157 / *4.0*	.060 / *1.59*

· For necking, these conditions are recommended for each width of cut when grooving with RN type chipbreakers.
· To prevent interference with the work material, the work diameter for each GNDN type holder should be set to the minimum machining diameter (DMIN) or less.

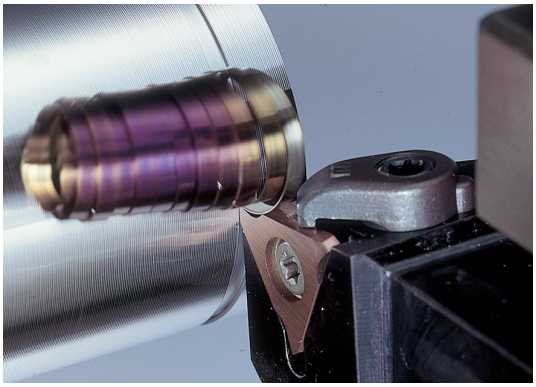
Chip Shape





Part Material : Cr–Mo Alloy Steel, Seat Size: 3
Holder : GNDN R2020K-325-020 Insert: GCMN3015-RN
Cutting Conditions: v_c= 330 SFM, f =0.004 IPR
Undercut Depth = 0.039” Wet

GWC Type



Features of GWC Type Series for Shallow Groove

- The same insert can be used for both external and internal grooving
- Full range of insert grades to cover a wide range of work materials
  Coated Carbide AC530U, Carbide H1, Coated Cermet T3000Z, Cermet T1500A, CBN BN2000, and PCD DA2200 are now in stock.
- A wide variety of grooving widths from (.060 - .090" & 0.33mm to 4.8mm
- SumiTurn B-Groove inserts with chipbreaker are now in stock
- Customers can modify the width of cut, nose radius and rake angle according to their own requirements with the blank inserts in stock.
  Customized edge shapes can be made-to-order.
  (Sumitomo Electric Carbide, Inc. also accepts such orders)

Right-handed (R) tool holders can be used with left-handed (L) inserts.

* Refer to TGA type insert group numbers on pages F35 and F36 for GWCS type holder applicable inserts. Select applicable inserts for the holders by using matching group numbers.

* Right-handed (R) tool holders are compatible with right-handed clamps (CCM○□R) and left-handed double screws (WB○-2○TL).
Left-handed (L) tool holders are compatible with left-handed clamps (CCM○□L) and right-handed double screws (WB○-2○T).

● Ordering TGA Type Special Inserts

Use the "Special Grooving Insert Request Form" when ordering special inserts (with different shapes, widths of cut, and cutting edge lengths).

Make a copy of the form, fill it out and send it to a Sumitomo Electric Carbide, Inc. Sales Representative or distributor.

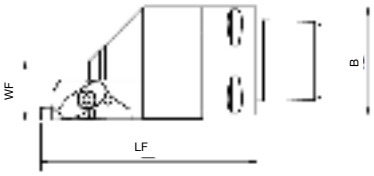
■ TGA PSC

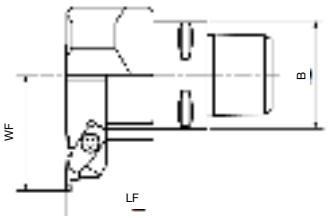
Characteristics of GWC PSC Series

- Similar insert can be use for both external and internal grooving
- Full range of insert grades to cover a wide range of work materials available:

Coated Carbide: AC530U
Uncoated Carbide: H1
Coated Cermet: T3000Z
Cermet :T1500A/T1200A
SUMIBORON: BN2000/BN250
SUMIDIA: DA2200

- A wide variation of grooving widths from 1.5mm to 4.8mm





■ Cassette

SumiTurn B-Groove

B-Groove

■ General Features

SumiTurn B-Groove (BF Type) inserts with chipbreaker have been added to the TGA Type grooving insert lineup to solve chip control problems.

■ Features

- Achieves good chip control in a wide range of grooving processes
- Good chip control during final wide groove touch-up with traverse cutting
- Series expansion of 14 items for circlip groove machining, covering grooving widths from 1.4mm to 4.5mm for a total of 60 stocked items.
- The AC530U grade with Super ZX Coat for a longer tool life is now in stock to cover various materials from steel and stainless steel to non-ferrous metals

Fig 1

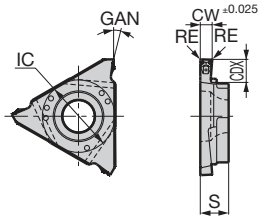

Fig 2

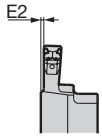

Grade		Cutting Edge	GAN
Coated Carbide	AC530U	Honing	15°

* For the rake angle when fitted on the holder, refer to page F34.

Note 1: Please note that inserts with edge width (CW) less than 1.85mm have different cutting edge distance (E2).
Note 2: Figure shows right hand (R) tool.

Recommended Cutting Conditions

Special Grooving Insert Request Form

This form applies to the GWC Type (page F4), GWCS Type (page F5) and GWCI Type (page F5) inserts.

To order special grooving inserts, fill out the form below (indicate preference by circling the item or specify dimensions), and send it to a Sumitomo Sales Representative or distributor. (Make a copy of this form.) For grooving insert shapes, widths of cut, cutting edge lengths and grades not listed below, contact your Sumitomo Sales Representative or distributor.

Form instructions

1. The above illustration shows only external right-hand and internal left-hand inserts.
   (The external left-hand and internal right-hand inserts will be opposite to the above illustration.)
2. The following two insert sizes are available.
   3: Inscribed circle 9.525mm
   4: Inscribed circle 12.70mm
3. Dimension limits for groove width and groove depth.
   (1) Maximum Width of Cut (CW): 4.8mm
   - For Models ① and ④ : CW ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)
   - For Model ② : CW + C1 ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)
   - For Model ③ : CW + E1 (or C1) + C2 ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)

   (2) Minimum Width of Cut (CW) · For Insert Size "3": CW ≥ 0.33mm
   · For Insert Size "4": CW ≥ 0.75mm

   (3) Groove Depth (CDX) · For Insert Size "3": CDX ≤ 0.8 to CDX ≤ 2.5mm (For I.D.: CDX ≤ 0.8 to CDX ≤ 2.0)
   · For Insert Size "4": CDX ≤ 2.0 to CDX ≤ 5.0mm (For I.D.: CDX ≤ 2.0 to CDX ≤ 2.5)
4. SumiTurn B-Groove (BF Type) grooving inserts with chipbreaker are limited to insert size 4 and AC530U grade.
   For shape details, please contact us directly.
5. The following shows the standard tolerance for inserts.

Symbol	Standard Tolerance
CW	±0.025mm
CDX	±0.05mm
KAPR1, KAPR2	±1°

   Unless otherwise specified, inserts are made to standard tolerances.
6. Insert grades are based on the catalogue numbers in stock.
7. The applicable tool holders for Models ①, ② and ④ should match the CW dimension. Contact us for Model ③.

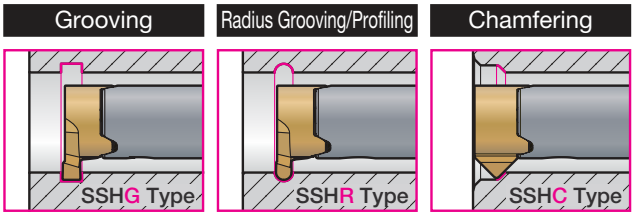
SSH Type

■ Features

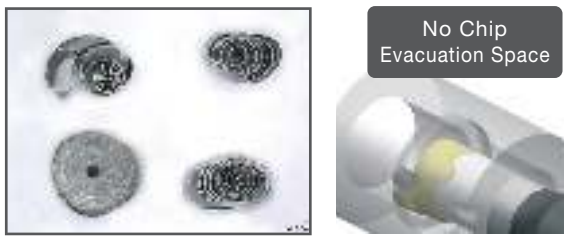
- Internal coolant supply for outstanding chip evacuation
- Tough carbide body for stable machining even with small diameters
- Adopts AC1030U for excellent machined surface quality
- Min. bore diameter of ø8mm and up supported
- Wide variety of widths of cut
  In addition to grooving applications, we have a lineup of 12 catalog items for c-clip groove machining



■ Chip Control

Stable and smooth evacuation of curled chips even on small bore diameters

SSH Type



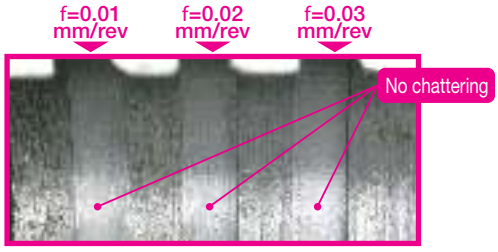
Evacuation from grooves is poor, inviting sudden breakage

Competitor's Product

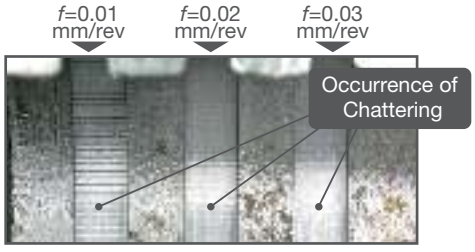
Part Material: Medium Strength Steel (S45C) Diameter: ø13mm Cutting Conditions: v_c=50m/min, f=0.02mm/rev, a_p=1.0mm Wet (Oil-based)

■ SSH Type Chatter Resistance

Outstanding sharpness and carbide shank suppress chatter



SSH Type



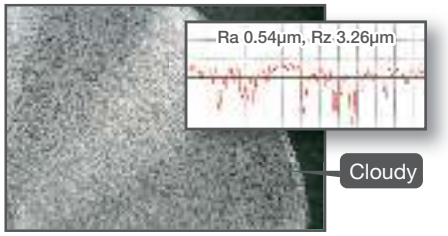
Competitor's Product

Part Material: edium Strength Steel (S45C) Diameter: ø13mm Cutting Conditions: v_c=100m/min, f=0.01, 0.02, 0.03mm/rev, a_p=0.2mm Wet (Oil-based)

■ SSH Type Machined Surface Quality

Glossy, Beautiful Surface Finish

SSH Type



Competitor's Product

Part Material: Alloy Steel (SCM440) Diameter: ø30mm Cutting Conditions: v_c=180m/min, f=0.02mm/rev, a_p=0.2mm Wet (Oil-based)

Recommended Cutting Conditions

Cutting Conditions below reflect EH520V grade

Material		Speed (SFM)	Feed Rate (in/rev)
Steels	free-machining carbon alloys plain carbon steels alloy steels 190-330HB alloy steels 330-450HB	450-750 400-700 400-700 350-600	.004 - .012
Stainless Steels	martensitic/ferritic stainless steel austenitic stainless steel	250-650 175-700	.004 - .009
Cast Iron	gray cast iron 190-330HB gray cast iron 330-450HB alloy/ductile irons	400-700 350-600 250-650	.004 - .015
High Temperature Alloys	high temp alloys 200-260HB high temp alloys 260-450HB titanium alloys Ti 6Al-4V	60-250 30-175 90-250	.003 - .008
Non-Ferrous Materials	free-machining aluminum alloys copper/zinc/brass non-metallics	600-2500 300-900 350-1200	.004 - .012

GWB Type

■ Features

- Vertically-mounted insert enhances tool rigidity
- Double clamping holder design improves stability during continuous and interrupted cutting. Can also be used for traverse cutting
- Long tool life for interrupted cutting applications with the Coated CBN - SUMIBORON BNC30G grade for grooving (BN2000 recommended for continuous cutting)
- Suited for grooving hardened steel, powdered metals, and cast irons. Variety of widths available from .059 to .236" and 1.5 to 6.0mm

Fig 1

* It is also possible to manufacture widths of cut other than those listed above (CW = 1.5 to 6.0mm).

Grade Features (See page L9 for details on BN7000 & BN7500)

Grade	Application Range	Features	HV(GPa)	TRS(GPa)
BN2000	Continuous Grooving	General-purpose grade with superior wear resistance	31 to 34	1.0 to 1.1
BNC30G	Interrupted Grooving	Grade suited to interrupted grooving. Features tough substrate and special ceramic coating that exhibits both peel-off and wear resistance.	33 to 35	1.1 to 1.2

Recommended Cutting Conditions

Cutting Conditions	H Hardened Steel
Cutting Speed v_c (SFM)	260 to 400
Feed Rate f (IPR)	.0016 to .0032

* In order to avoid thermal cracking of the SUMIBORON cutting edge during interrupted cutting, ensure that the work material is thoroughly dry before cutting.

Application Examples

Tooling	Work Material	Tool Cat. No.	Cutting Condition	Tool Life Comparison

N·m Recommended Tightening Torque (N·m)

CGA PSC / BNGG

CGA PSC

■ Features & Benefits

- New double clamping system provides reliable grooving of hardened steel
- 80° tangentially mounted CGA style insert for improved rigidity
- Wide range of widths and grades for continuous and interrupted grooving operations
- New special coated CBN grade BNC30G extends tool life of insert

External CBN

Top Clamp
for Hardened Steel Shallow Grooves

■ Features & Benefits

- Improved rigidity for longer tool life
  Strong clamping reduces insert breakage and holder chatter
- Enhanced tooling for 2mm fine grooves or threading
  Grooving and threading can be done by changing the support

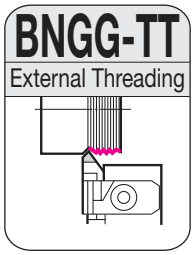

Fig 1 (Grooving)

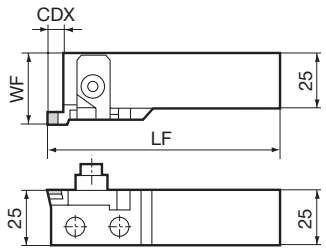

Fig. 2 (Threading)

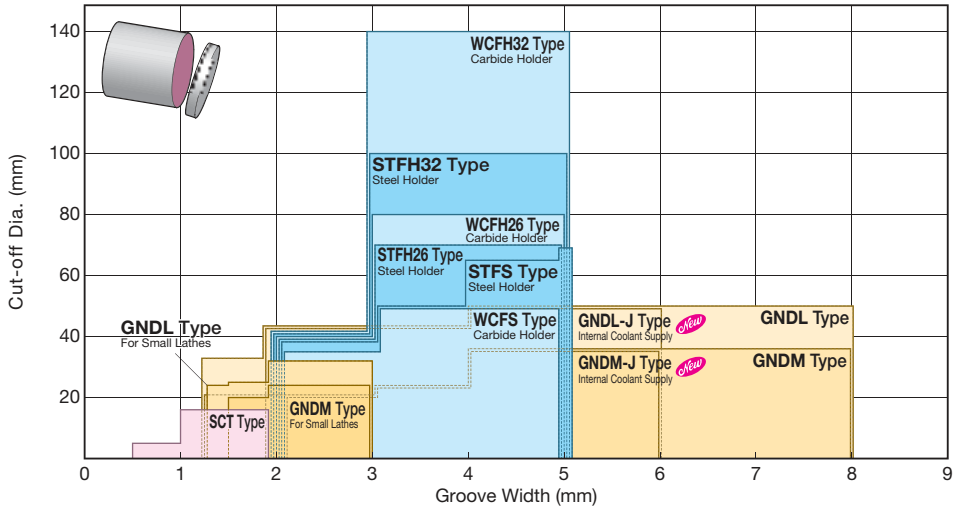
Cut-off



■ Range of Tool Applications (For Solid Workpieces)

Applications	Series	Shape	Insert Shape (): indicates no. of cutting edges	Cut-off Dia. / Groove Width	Features
For Small Lathes	**SCT**		 (2) In Stock: Right Left Neutral	16.0 / 2.0 / 0.5	· Ground insert with good sharpness · Can clamp even from behind · 2-cornered type
For Small to Medium Diameters	**GNDM/ GNDL** For Small Lathes		 (2) In Stock: Right Left Neutral	32.0 / 1.25 / 3.0	· High-rigidity design and outstanding chip control · Unground 2-cornered type Available with widths starting at 1.25mm
	GNDM(-J)/ GNDL(-J)			50.0 / 2.0 / 8.0	· High-rigidity body, rigid clamping · Outstanding chip control · Unground 2-cornered type
For Medium to Large Diameters	**STFH/ STFS** (SumiGrip Jr.)		 (1) In Stock: Right Left Neutral	100.0 / 2.0 / 5.0	· Can be used for large diameter machining up to ø100mm · Economical steel shank · 1-cornered self-grip type
	WCFH/ WCFS (SumiGrip)		 (1) In Stock: Right Left Neutral	140.0 / 2.0 / 5.0	· Can be used for large diameter machining up to ø140mm · High-rigidity carbide shank · 1-cornered self-grip type

■ Cut-Off Tool Series

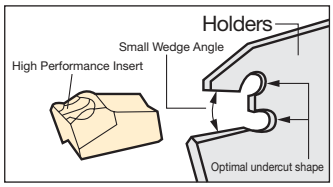
Small Diameter Cut-Off Tool Holders **SCT Type**		· Our first recommendation for small lathes · Excellent sharpness reduces cutting resistance and central pips!	
Cut-off Tool Holders **GND Type** (GNDM(-J) Type / GNDL(-J) Type)		· Our first recommendation for small to medium diameters · Enables stable cutting off due to high-rigidity body and rigid clamping	
Cut-off Tool Holders **SumiGrip Jr.** Steel Shank **SumiGrip** Carbide Shank		· Our first recommendation for medium to large diameters · Blade type is also available for cutting off up to ø140mm	

■ Features

- Available in carbide blade (SumiGrip) and steel blade (SumiGrip Jr.)
- Capable of interrupted machining.
- Can be used for cutting off, grooving, chamfering, etc.

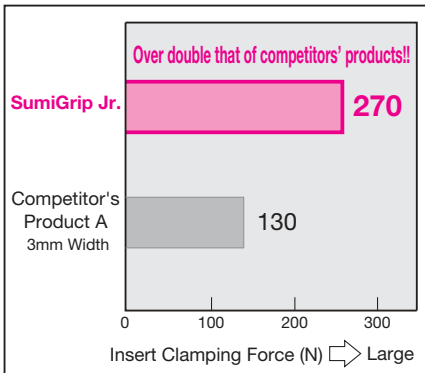
■ Types

1. Tool Block Type
   STFH Type (Steel)/WCFH Type (Carbide)
2. Shank Type
   STFS Type (Steel)/WCFS Type (Carbide)

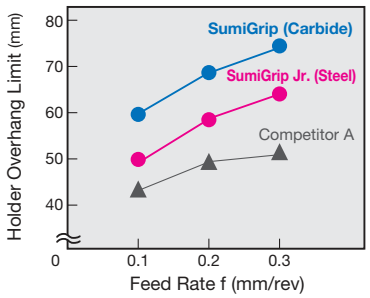


■ Cutting Performance (Holder)

● Insert Clamping Force

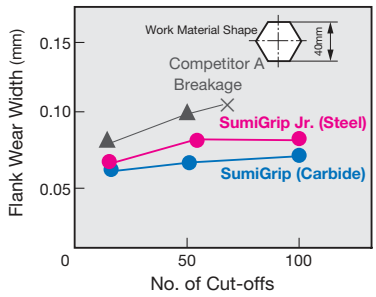


● Holder Overhang



Part Material: Medium Strength Steel S45C (ø50mm, 250HB)
Cutting Conditions: v_c=80m/min Dry

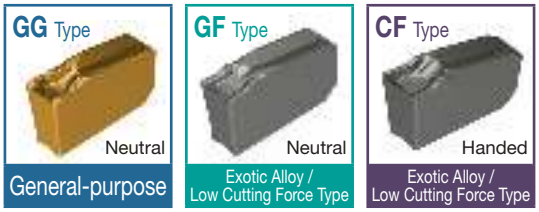
● Wear Resistance



Part Material: Medium Strength Steel S45C(Hex), Insert: 3mm Width Coated
Cutting Conditions: v_c=150m/min, f=0.15mm/rev
Wet (Water Soluble)

■ GG Type/GF Type/CF Type Chipbreaker, New Grade AC1030U

- Utilizing grooving tool GND type chipbreaker series for excellent chip control.
- Low cutting force chipbreaker GF type (neutral) or CF type (handed) inserts, coupled with a carbide blade enable stable machining and prevents chattering even when machining stainless steel.
- Achieving stable and long tool life with the new AC1030U grade.

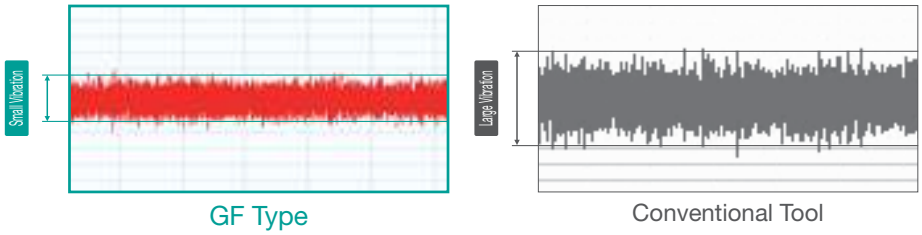


■ Cutting Performance (Chipbreaker)

● Chip Control (Performance)

Work Material: S45C (ø40mm)
3.0mm Width Cut-Off
Cutting Conditions: v_c=100m/min
f=0.1mm/rev
Wet

● Anti-Vibration Performance



Work Material: SUS316 (ø40mm)
3.0mm Width Cut-Off
Cutting Conditions: v_c=100m/min
f=0.1mm/rev
Wet

Cut-off
(Steel Holder/Tool Block Type)

STFH
Cut-off

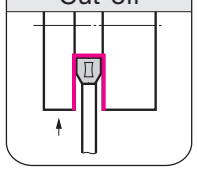

Fig 1

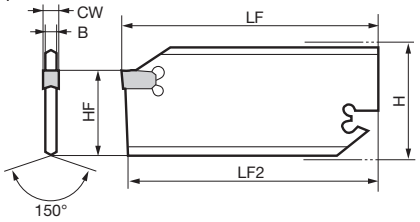
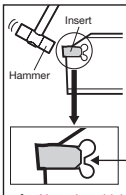


● Insert Mounting Method



Mount the insert by lightly knocking it in with a wooden or plastic hammer.

(Check that the insert cannot be pulled out by hand.)

There is no need to force the insert back end against the holder.

⚠ Note that driving in the insert too far may cause damage to the insert or holder.

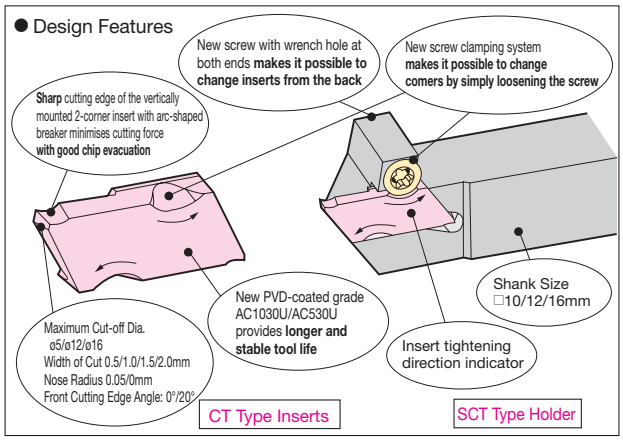
Features

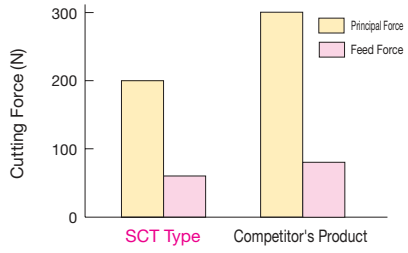
- Simple Indexable Inserts
  New clamping system makes it possible to change corners simply by loosening the screw from the back
- High quality surface finish
  Excellent chip removal with good surface finish even at the centre of the work material end face.
- Long, stable tool life with PVD-coated AC1030U/AC530U

● Design Features



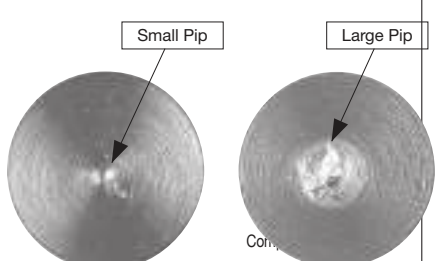
Performance

● Cutting Force



Work Material: S45C (ø10mm), Width of Cut: 1.5mm
v_c=60m/min, f=0.06mm/rev Wet

● Surface Finish



Work Material: SUS430 (ø8mm), Width of Cut: 1.0mm (With Feed Direction)
v_c=45m/min, f=0.02mm/rev Wet

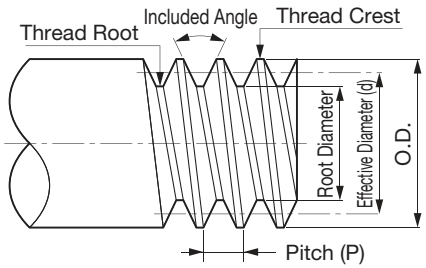
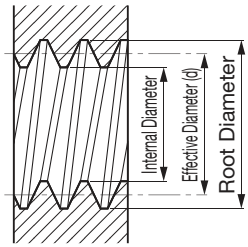
NPTF : 60° American NPTF
UNJ : 60° UNJ

Basics of Threading

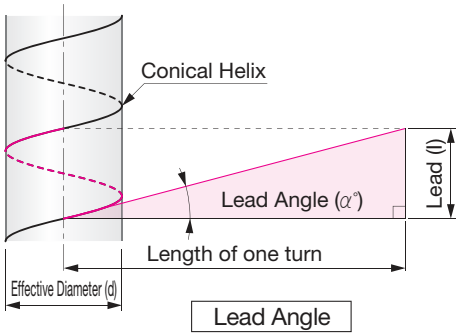
■ Parts of a Screw



External Thread



Internal Thread



Lead Angle

Effective Diameter (d) : Diameter of imaginary cylinder that passes through the thread at the point where the groove and ridge widths are equal
Pitch (P) : Distance between two ridges adjacent to each other
Lead (l) : Distance the screw thread moves axially in one turn
(On a single threaded screw, the lead and pitch are identical.)
Lead Angle (α) : Angle made by the conical helix of the thread ridge at a pitch diameter with a plane perpendicular to the axis

● Lead Angle Calculation

$$\tan\alpha^\circ = \frac{l}{\pi \times d} = \frac{n \times P}{\pi \times d}$$

α° : Lead Angle
l : Lead
n : No. of Threads
P : Pitch
d : Effective Screw Diameter

■ Main Screw Types and Standard Thread Patterns

Applications	Symbol	Basic Profile
Metric Thread	M	Internal Thread, 1/4P, 60°, h, 1/8P, External Thread
Parallel Thread for Pipe	Internal Thread: G(PF), Rp(PS); External Thread: G(PF)	Internal Thread, R0.137P, 55°, h, R0.137P, External Thread
Taper Thread for Pipe	Internal Thread: Rc(PT), (BSPT); External Thread: R(PT), (BSPT)	R0.137P, Internal Thread, 27.5°, 27.5°, 90°, 1°47', R0.137P, External Thread
Unified Thread	UN, UNC, UNF, UNEF	Internal Thread, 1/4P, 60°, h, 1/8P, External Thread
Whitworth Thread	W, BSW, BSP	Internal Thread, R0.137P, 55°, h, R0.137P, External Thread
Thread for Aerospace Instruments	UNJ	Internal Thread, 5/16P, 60°, h, R, External Thread
American Taper Thread for Pipe	NPT	Internal Thread, 30°, 30°, h, 1°47', 90°, External Thread
American Taper Thread for Pipe	NPTF	Internal Thread, 30°, 30°, h, 1°47', 90°, External Thread

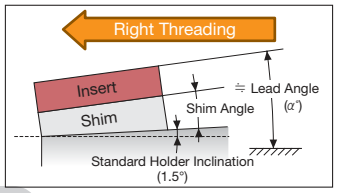
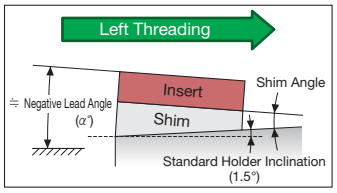
■ Threading Method and Angle of Insert





SSTE Type / SSTI Type

■ Features

- High-precision inserts with wiper edge for threading, supporting a wide range of applications from general industrial machinery to pipes and aerospace devices
- Stable chip control through use of a 3D molded chipbreaker
- Ground cutting edge flank for improved cutting edge sharpness, resulting in high quality threads

Ground flank periphery around cutting edge

⑥ Chipbreaker

Symbol	Description
CB	With Chipbreaker

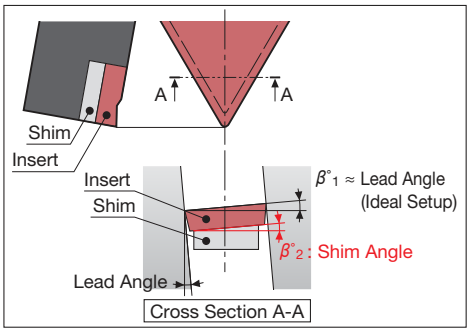
■ Shim Selection

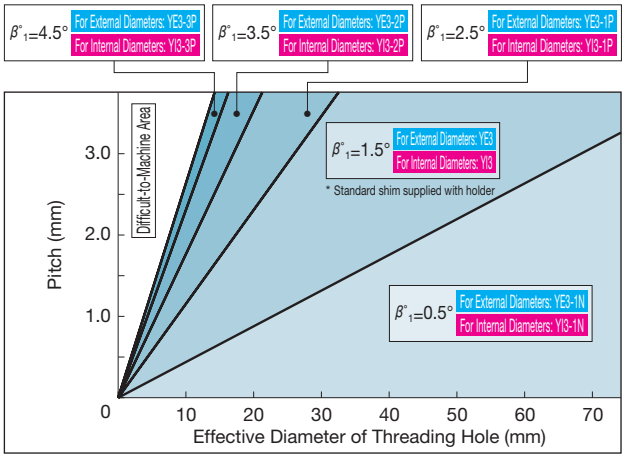
If the pitch is large or the threading diameter is small, the threading lead angle will become large and the effective relief angle will become small.
It is ideal to set the threading insert so that both right and left relief angles are equal.
Therefore, it is necessary to select an appropriate shim based on the thread pitch and effective diameter using the table below.



■ Shim Selection Procedure

1. Choose from [Right-Hand Thread / Left-Hand Thread] in the table.
2. Locate the required threading "pitch".
3. Locate the cell with the required "Effective Diameter" range.
4. Confirm the part no. at the "Shim" row above the corresponding "Effective Diameter" cell located previously. If the shim part no. is different from the one currently in use, change to the correct one.

Example: When machining a M16x2.0 external right-hand thread, the pitch diameter is 14.701mm. In the table below, locate [2.0]mm under the "Pitch" column then move along the row to the right to locate the required "Effective Diameter" range [11.4 - 17.4]mm.
As such, the correct shim should be [YE3-1P], shown in the corresponding cell under the "External" row above.



● Pitch (mm)

Right-hand/Left-hand Thread		For Right-hand Thread					For Left-hand Thread	
Lead Angle		4.5°	3.5°	2.5°	1.5°	0.5°	-0.5°	-1.5°
Shim	External	YE3-3P	YE3-2P	YE3-1P	YE3*	YE3-1N	YE3-2N	YE3-3N
	Internal	YI3-3P	YI3-2P	YI3-1P	YI3*	YI3-1N	YI3-2N	YI3-3N
	Shim Angle (β_1)	3°	2°	1°	0°	-1°	-2°	-3°
Pitch (*mm*)		Effective Diameter (*mm*)

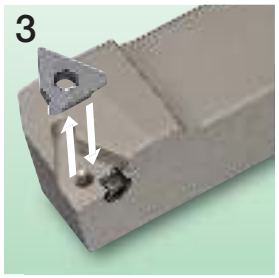
* SSTE Type/SSTI Type holders are shipped with shims for lead angle of β_1 = 1.5° (SSTE Type: YE3, SSTI Type: YI3).
Shims for lead angles of β_1 = -1.5°, -0.5°, 0.5°, 2.5°, 3.5°, and 4.5° are sold separately.
* Shims are not needed for SSTI R1812M16 and SSTI R2016M16. (The holders are already provided with the standard holder inclination of 1.5°.)

SSTE / SSTI Inserts

■ Shim Replacement

Remove the insert to expose the shim.

Loosen the shim set screw by one to two turns.



Remove the shim and mount a different shim that matches the lead edge angle.

Tighten the shim set screw. (Recommended Tightening Torque 1.0 to 1.5N·m)

■ Wiper Edge (Partial Profile & Full Profile)

Partial Profile	Full Profile
	· Performs threading without machining thread ridges (the machined surface from the previous process is left unworked.) · Enables machining of threads with different pitch widths with the same insert · Finishing of the internal (or external) diameter is required before the threading process. · Fine burrs are easily formed on edges of ridges	· Enables machining of workpieces into shapes compliant with thread standards · Only specific thread specifications and pitch can be machined · In order to finish a thread with the wiper edge, a finishing allowance of 0.1mm on each side is required · Edges of ridges can be rounded off.

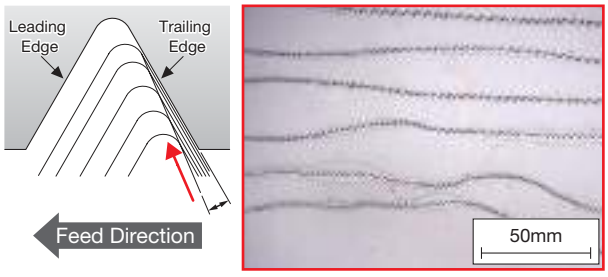
■ Infeed Method

The modified flank infeed is recommended for the SSTE Type/SSTI Type.
This infeed method, which features reduced chip curl diameters and stable chip control, can also decrease chipping on trailing edges that often occurs in radial infeed machining. (1° is recommended for the modification angle.)

● Impact of Infeed Method on Chip Shapes

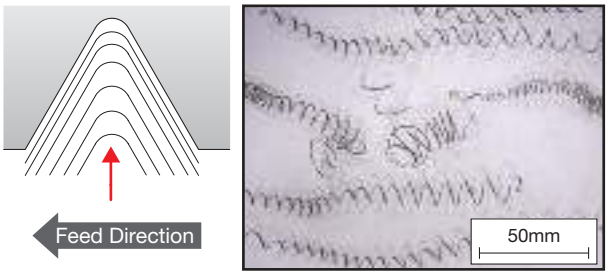
Work Material: SUS316, M30 x 1.5 Cutting Conditions: v_c=60mm/min Wet, 8 Passes

Modified Flank Infeed



Reduced curl diameters ensure smooth, stable chip control (performance)

Radial Infeed Machining



Large curl diameters cause unstable chip control

No. of passes and depths of cut in the table above are general guidelines only. Increase or decrease depending on conditions. However, the maximum depth of cut should be kept to 0.5mm or less.
When using an insert with a wiper edge, add machining allowance to the total depth of cut.

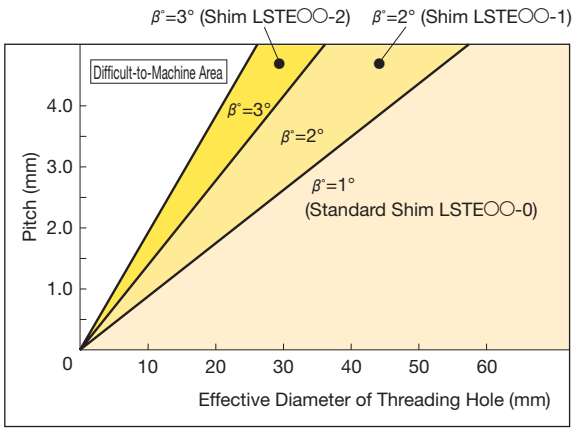
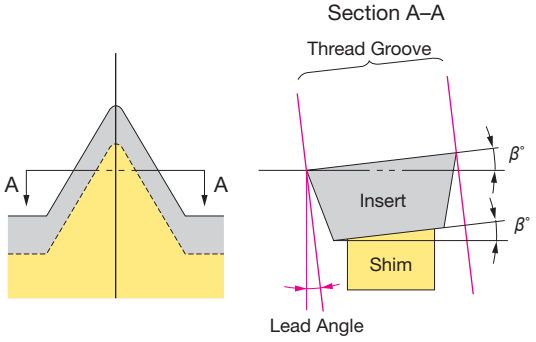
■ Shim Selection for External Threading Tool LTE Type Holder





Standard shim that comes with LTE has β=1°.
β=2°, 3° shims are sold separately.
STE and STI Type holders do not come with shims.

Insert	TH R····A	TH R····B	TH L····B	TH L····A
Features	It is often used in common tooling for workpieces that have a thread at their top end. In this type of tooling, the undercutting width indicated with the arrow can be reduced since the cutting edge point is placed closer to the guide bush side.	Often used when a thread is at the middle of the workpiece or at the rear. In this type of tooling, the undercutting width indicated with the arrow can be reduced since the cutting edge point is placed closer to the back turning side.	With a left hand holder used, a sufficient cutting distance can be kept since the cutting edge position is separate from the guide bush. For the left-hand holder, the selection of A type and B type is the reverse of the right-hand holder. (B indicates the guide bush side while A indicates the back turning side.)

Polygon Shank Toolholders

■ General Features

SumiPolygon shanks feature keyless couplings with the characteristic polygonal shape, which bear cutting torque evenly on three surfaces, providing high rigidity and high index accuracy.

For support with non-standard design specifications, contact us directly.

■ Features

- Sizes
  - Shank size PSC32 (DCSFMS = 32mm) to PSC80 (DCSFMS = 80mm) supported
- High Rigidity/High Precision
  - 1/20 polygon tapered shape supported on 2 faces for high rigidity
  - Keyless coupling distributes cutting torque uniformly to 3 faces, reducing fluctuations in cutting edge height
  - Repeatability when tools are changed is within ±2μm on all 3 axes
- Reduced Tool Change Time
  - Changing inserts on the machine is not needed so the tool change time is significantly reduced
- Coolant supported (up to 1MPa)

■ Coupling Structure

■ Repeat Accuracy

Repeatability when tools are changed is within ±2μm on all 3 axes X-Axis (Radial Direction) Y-Axis (Centre Height Direction), Z-Axis (Lengthwise Direction)

Damper Arbors

■ General Features

Dampers are arbors equipped with a special anti-vibration mechanism that has both counter damping and friction damping effects.
This suppresses chatter and prevents decreased machined surface quality and tool life when machining with a large overhang.

■ Features

· Using a basic holder and damper head in combination
· Basic holder lineup supports **BBT50** arbor and **HSK-A100** arbors in different lengths.
· Through-centre coolant compatible.

Surface Milling Example with 347mm Overhang Length

Arbor	Results	
	Machined Surface	Vibration
Competitor's Arbor No vibration control mechanism		Damper With Vibration Control Mechanism		

Suppress chatter by using a smart damper!!

Work Material: S50C
Tool: Tool Diameter ø63 (5-Flute)
Cutting Conditions: v_c = 100m/min, f_z = 1.0mm/t, a_p = 1.4mm, a_e = 30mm

■ Combination Example (**BBT50** Type)

Refer to the user's manual for methods of mounting to basic tool holders.
The cutter is not included in the weight.
A hook wrench and clamp bolt for tightening the cutter are included.
DCSFMS shows the cutter mounting surface diameter. Take care if the mounting surface diameter is small relative to the cutter outer diameter.

Micro Units

This section introduces an overview of the series.
Refer to the separate "SEC-Cartridge Unit / Micro Unit" catalog for details on Micro Units (holders, inserts, spare parts) and quill unit seat machining.

Note: Use MUP type micro units when designing new tooling. Conventional tool types (MUN type) are manufactured only as replacement parts.

Face Milling	For General Steel, Cast Iron, Exotic Alloy and Non-Ferrous Metal	**WGX** H16
	For General Steel, Cast Iron, Exotic Alloy and Non-Ferrous Metal	**DGC** H28
	For High-efficiency Cast Iron / Cast Steel Milling	**DNX(F) / DNH, DNHS** H40
Shoulder Milling	For High-precision Milling of Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal (New)	**WEZ** H46
	For High-precision Milling of Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	**WEX** H64
	For High-efficiency Deep-Step Shoulder Milling	**WRX** H78
	For High-feed Milling of Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	**WFX** H84
	For General Steel and Cast Iron	**DFC** H96
	For High-efficiency Milling of Steel, Cast Iron and Stainless Steel	**TSX** H108
	For Steel, Cast Iron and Stainless Steel	**PWS(F) / PWSR** H134
High Feed	For High-speed, High-efficiency Milling of Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	**WFXH** H137
	For High Feed Machining of Steel, Cast Iron and Stainless Steel	**MSX** H142
Multi-Purpose		**WMM** H146
Radius	For Steel, Die Steel, Cast Iron, Stainless Steel and Exotic Alloy	**RSX** H150
	For Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	**WRCX** H160
R / 3D Profiling	For Roughing	**WBMR** H167
	For Finishing	**WBMF** H170
Groove / T-Slot	For T-Slot Endmilling	**T-Slot Endmill TSE** H172
	For Groove Milling of Steel and Cast Iron	**Slitting Cutter TSM** H173
Chamfering	For Chamfering	**WFXC** H174
	For Chamfering	**Chamfering Endmill SMC** H177
Non-ferrous Metal	For High-speed, High-efficiency Milling of Aluminum Alloy and Non-Ferrous Metal	**ALNEX ANX** H178
	For High-efficiency Milling of Aluminum Alloy and Non-Ferrous Metal	**HF** H186
	For High-speed Milling of Aluminum Alloy and Non-Ferrous Metal	**RF** H192
	For Small Diameter Milling of Aluminum Alloy and Non-Ferrous Metal	**SRF** H194
	For High-speed, High-efficiency Milling for Non-Ferrous Metal	**WAX** H196
High-speed Cast Iron	For High-speed Finishing of Cast Iron	**CBN BN Finish Mill EASY (FMU / FMU-E)** H201
	For High-speed, High-efficiency Milling of Cast Iron	**Cutter RM for High-speed Milling of CBN Cast Iron** H202

*Use a chamfering tool for chamfering operations.

■ Precautions when Using Wiper Inserts with Holes

- When assembling the wiper insert, attach it as shown in Fig. 1. When attached as shown in Fig. 2, normal machined surface roughness cannot be obtained.
- The wiper insert has a single corner specification.
- Refer to page N19 of Technical Guidance for details about milling with wiper inserts.

Grades for Milling / Characteristic Values

CVD

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**ACP100**	89.3	3.1	Super FF Coat	6	· For high-speed machining of steel · Grade emphasizing wear resistance for high-speed machining	AC230
	ACP2000	89.5	3.2	Absotech	10	· For high-speed machining of steel · Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal crack resistance	ACP100
M Stainless Steel	**ACM200**	89.8	3.4	Super FF Coat	6	· For machining high-hardness stainless steel · Adopts newly developed high-strength cemented carbide with excellent wear resistance and thermal resistance, realizing outstanding stability when machining hardened stainless steel	AC230
K Cast Iron	**ACK100**	92.0	2.4	Super FF Coat	6	· For high-speed cast iron milling · Adopts a high-hardness substrate as a grade with high wear resistance	—
	ACK200	91.7	2.5	Super FF Coat	6	· For high-speed cast iron milling · Adopts a tough carbide substrate as a grade with excellent wear resistance and thermal crack resistance	AC211
	ACK2000	91.7	3.1	Absotech	10	· For high-speed cast iron milling · Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal resistance	ACK100 ACK200

PVD

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**ACU2500**	91.6	3.8	Absotech	3	· General-purpose grade supporting steel, stainless steel, and cast iron machining · Adopts a carbide substrate with excellent fracture resistance and wear resistance, plus a new coating with excellent wear resistance and chipping resistance, providing stable long tool life with various work material grades	—
	ACP200	89.5	3.2	Super ZX Coat	3	· Our 1st recommended grade for steel applications · General-purpose grade with an excellent balance of wear and fracture resistance · Also suitable for machining stainless steel	ACZ330
	ACP300	89.3	3.1	Super ZX Coat	3	· For interrupted machining of steel · Tough grade with an emphasis on fracture resistance · Also suitable for interrupted machining of stainless steel	ACZ350
	ACP3000	89.5	3.2	Absotech	3	· Our 1st recommended grade for interrupted or unstable work holding conditions for milling steel · Carbide substrate with excellent thermal crack resistance, plus a new coating with excellent wear resistance and chipping resistance, realises stable long tool life over a wide range of cutting conditions	ACP200 ACP300
M Stainless Steel	**ACM100**	91.4	3.3	Super ZX Coat	3	· For high-speed machining of stainless steel · Adopts high-hardness micro-grain carbide substrate and super multi-layered coating to realise outstanding wear resistance	ACZ310
	ACM300	89.8	3.4	Super ZX Coat	3	· Our 1st recommended grade for milling stainless steel · Adopts high-strength carbide substrate and super multi-layered coating for next-level wear resistance and fracture resistance	—
K Cast Iron	**ACK300**	91.4	3.3	Super ZX Coat	3	· General-purpose grade with an excellent balance of wear and fracture resistance	ACZ310
	ACK3000	91.7	3.1	Absotech	3	· Our 1st recommended grade for milling cast iron · Adopts a high thermal conductivity carbide substrate and a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life over a wide range of cast iron machining operations	ACK300
N Non-Ferrous Metal	**DL1000**	92.9	2.1	AURORA Coat (DLC)	0.5	· For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—
	DL2000	91.6	3.8	AURORA Coat (DLC)	0.5	· For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—

Cermet

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**T1500A**	92.0	2.2	—	—	· For finishing of steel and stainless steel · Excellent balance of wear and fracture resistance, achieving excellent machined surface quality over a wide range of cutting conditions	T1200A
	T250A	91.4	2.1	—	—	· For finishing of steel and stainless steel · Tough grade with enhanced crack spread resistance	—
M Stainless Steel	**T2500A**	91.8	2.4	—	—	· For finishing of steel and stainless steel · Fine, uniform grain structure greatly improves toughness, realising long tool life and excellent surface finishes	T250A
	T4500A	91.0	2.3	—	—	· For finishing of steel and stainless steel · Tough grade with excellent fracture resistance and reduced thermal cracking	—

CBN

Classification	Grade	Binder	Carbon Content (%)	Grain Size (μm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (μm)	Features
K Cast Iron	**BNS800**	Al Alloy	85 to 90	8	39 to 42	0.9 to 1.1	—	—	Grade with 100% solid CBN structure and excellent thermal shock resistance.
	BN7000	Co Compound	90 to 95	2	41 to 44	1.8 to 1.9	—	—	Grade exhibiting wear and fracture resistance in cutting of cast iron and exotic alloys.
	BN500	TiC	65 to 70	6	32 to 34	1.0 to 1.1	—	—	Grade optimized for cast iron cutting. Provides superior wear and fracture resistance.
H Hardened Steel	**BN350**	TiN	60 to 65	1	33 to 35	1.5 to 1.6	—	—	Grade with ultimate cutting edge strength, suitable for heavy interrupted cutting.

Polycrystalline Diamond

Classification	Grade	Binder	Carbon Content (%)	Grain Size (μm)	Hardness HK (GPa)	TRS (GPa)	Features
N Non-Ferrous Metal	**DA1000**	Co	90 to 95	up to 0.5	50 to 60	≈ 2.60	High-density sintered material made of ultra-fine grain diamond that demonstrates optimum wear and fracture resistance and excellent edge sharpness.

S	For WBMR Insert Main Blade

* Exceptions

The above table does not apply to the following insert codes: SPCH42TR, SPCH42R, SPCH53TR, SPCH53R, SDKN42MT, SDKN42M, SDKN53MT, SDKN53M, SEKN42MT, SEKN42M, SEKN53MT and SEKN53M.

For example,

· although "H" and "K" indicate precision tolerances, the main cutting edges have general precision.

· "M" in this instance represents the Neutral Hand insert.

· "T" in this instance represents negative land edge treatment.

· "R" indicates the feed direction (right hand).

■ General Features

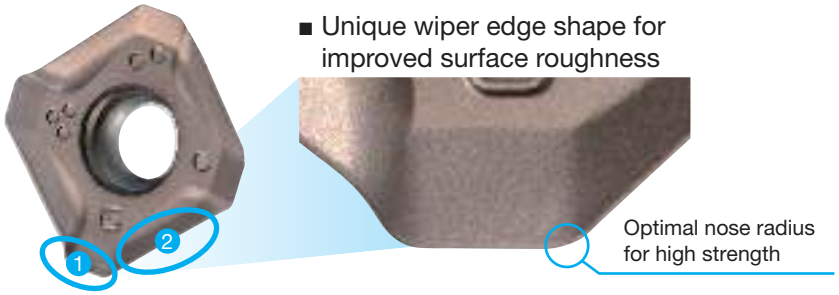
SEC-WaveMill WGX Type employs a unique chipbreaker design to provide lower resistance and higher-quality finished surface roughness than conventional tools.
Lineup of insert grades and chipbreakers has been significantly expanded, and employment of the ACM series enables machining of stainless steel and exotic alloys.

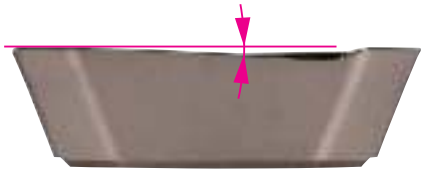
■ Features

- Reduced Cutting Force
  - · High-rake chipbreaker designed for use with the WGX type achieves low resistance
- High Quality
  - · Improved runout precision and unique wiper edge shape ensure excellent surface finish quality
  - · Addition of chamfer reduces burrs and edge chipping
- New Grade Coating
  - · Features high-precision technology that reduces insert runout variation and a new coating to provide long, stable tool life
  - · The new ACM200 and ACM300 grades for stainless steel/exotic alloy machining further expand the range of applications

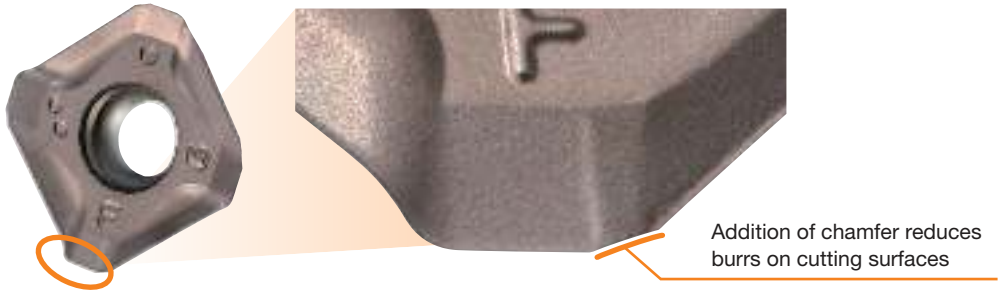
■ Insert Shape Features

- General-purpose G Type Chipbreaker





- FG Type Chipbreaker with Low-Burr Design



■ Product Range

Type	**Inch Type**	Cutter Dia.	Number of Teeth	Mounting
Standard Pitch	WGX4000R	ø2.0" to ø10.0"	3 to 10	Inch
Fine pitch	WGXM4000R	ø2.0" to ø8.0"	4 to 12	Inch
Extra Fine Pitch	WGXF4000R	ø2.0" to ø8.0"	5 to 20	Inch
Endmill Type	WGX4000EW	ø2.0" to ø2.5"	4 to 5	Inch

Type	**Metric Type**	Cutter Dia.	Number of Teeth	Mounting
Standard Pitch	WGX13000R(S)	ø40 to ø250	3 to 10	Inch/Metric
Fine pitch	WGXM13000R(S)	ø50 to ø250	4 to 14	Inch/Metric
Extra Fine Pitch	WGXF13000R(S)	ø50 to ø250	5 to 24	Inch/Metric
Endmill Type	WGX13000EW	ø32 to ø63	3 to 5	Metric

Sizes of ø125mm and below have a coolant hole

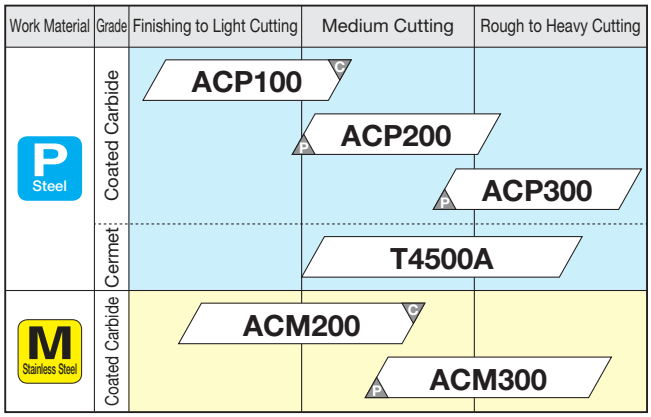
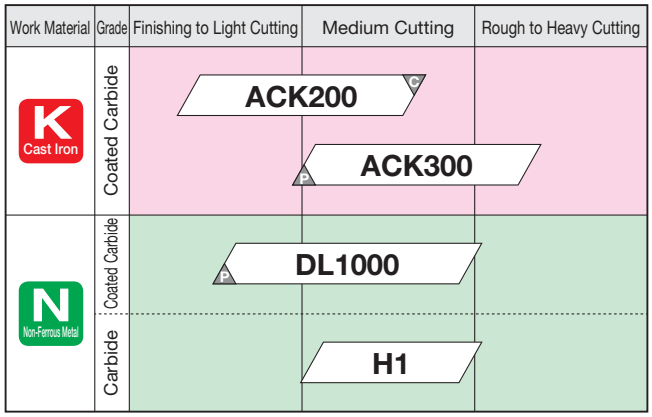
Standard Pitch	Fine Pitch	Extra Fine Pitch	Endmill Type

■ Grade Application Range





The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated

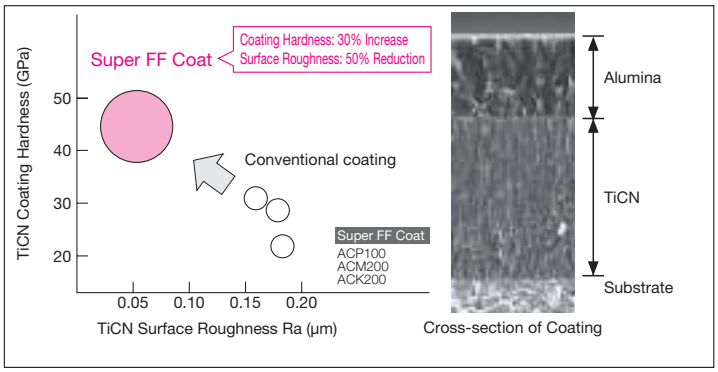
■ Coating Features

C Super FF Coat (CVD: Chemical Vapor Deposition)

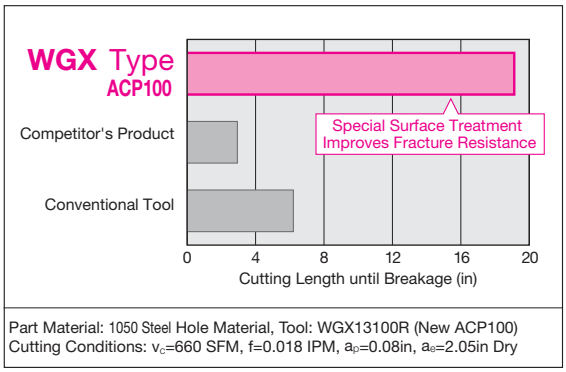
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology.

- Achieves excellent chipping resistance with smooth coating and our coating stress control technology.
- High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer.
- Achieves more than double the tool life of conventional tools under the same cutting conditions.

Characteristics of the Coating Layer



Fracture Resistance



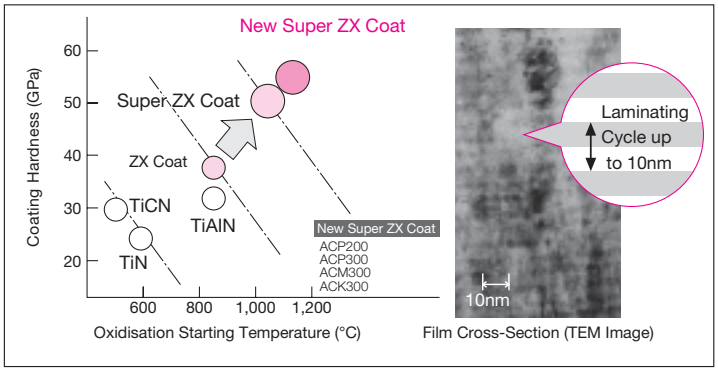
Part Material: 1050 Steel Hole Material, Tool: WGX13100R (New ACP100)
Cutting Conditions: v_c=660 SFM, f=0.018 IPM, a_p=0.08in, a_e=2.05in Dry

P New Super ZX Coat (PVD: Physical Vapor Deposition)

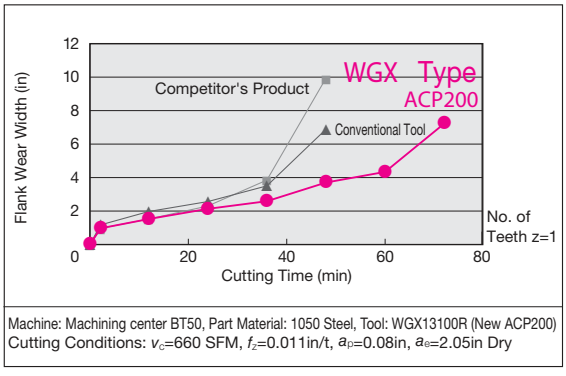
Employs our super multi-layered New Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-thin (1 nanometer=1 billionth of a meter) layers.

- Compared to conventional tools, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C.
- Enables more than 1.5 times the machining speed and efficiency of conventional tools.
- Achieves more than double the tool life of conventional tools under the same cutting conditions.

Characteristics of the Coating Layer



Wear Resistance



Machine: Machining center BT50, Part Material: 1050 Steel, Tool: WGX13100R (New ACP200)
Cutting Conditions: v_c=660 SFM, f_z=0.011in/t, a_p=0.08in, a_e=2.05in Dry

■ Chipbreaker Selection

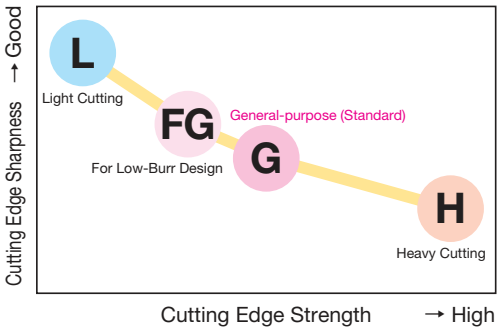
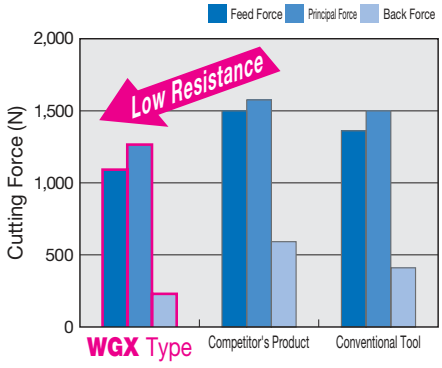
Features	Low Resistance	Standard / With Wiper Edge	Standard	High Strength	Wiper
Applications	Light Cutting	General-purpose / Burr Prevention	General-purpose	Heavy Cutting	Finishing Surface Roughness Emphasised

■ Chipbreaker Selection Guide



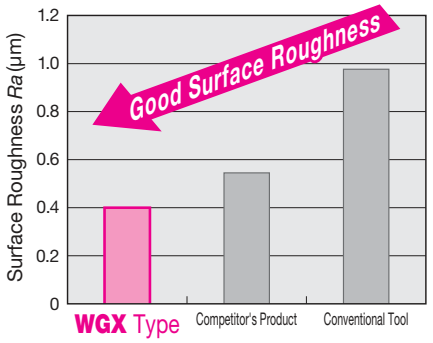
■ General-purpose G Type Chipbreaker

● Comparison of Cutting Force



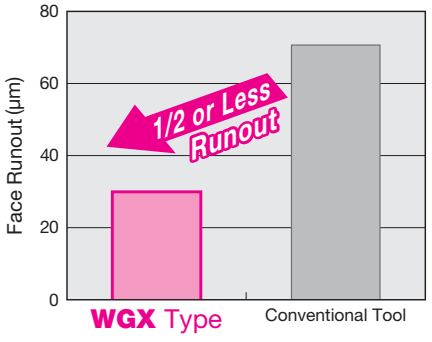
Work Material: 1050 Steel, Tool: ø100
Cutting Conditions: v_c=660 SFM, f_z=0.008 IPT, a_p=0.12in

● Finishing Surface Roughness Comparison



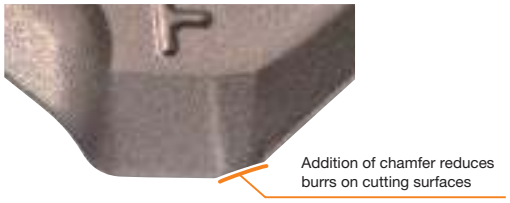
Work Material: 1050 Steel, Tool: ø100
Cutting Conditions: v_c=660 SFM, f_z=0.008 IPT, a_p=0.12in

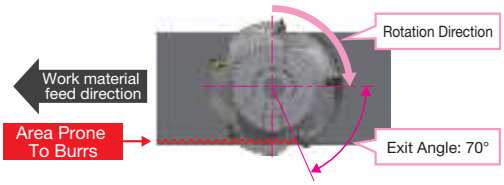
● Runout with Insert Attached



Tool: WGXM13100R (ø100)
Number of Teeth: 7

■ FG Type Chipbreaker with Low-Burr Design





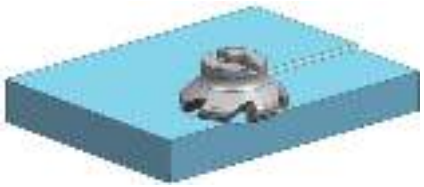
● Machined Surface Comparison

Work Material	FG Type	G Type	Conventional Tool	Competitor's Product
1050	○ 	○ 	○ 	×  Burr formation
304	○ 	○ 	×  Burr formation	×  Burr formation
4140	○ 	×  Burr formation	×  Burr formation	×  Burr formation

Machine: Machining Center BT50, Tool: WGX13100R (ø100), Insert Grade: ACP200
Cutting Conditions: v_c=660 SFM, f_z=0.008 IPT, a_p=0.12in, a_e=3.15in Dry

■ Application Examples

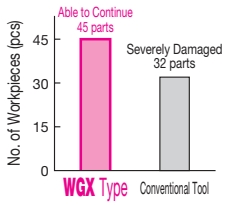
● 4130 Block Material



Surface roughness greatly improved compared to competitors' products.
Superior sharpness and reduced cutting force. Stable cutting can be performed with a low cutting load.

Tool: WGX13125R (ø125) Insert: SEMT13T3AGSR-G (ACP200)
Cutting Conditions: v_c=720 SFM, f_z=0.01 IPT, a_p=0.08", a_e=5.0" Dry

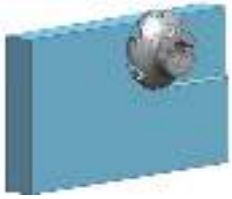
● ST-52 Pipe Steel



The conventional tool suffered severe damages after 32 parts,
while the WGX Type only had minor wear after 45 parts and was able to continue.

Tool: WGXM13125R (ø125) Insert: SEMT13T3AGSR-G (ACP200)
Cutting Conditions: v_c=984 SFMn, f_z=0.005 IPT, a_p=0.16", a_e=4.0" Wet

● A36 Machine Components



For low-rigidity machines, chattering occurred with conventional tools,
but the WGX Type reduces chattering, as well as the occurrence of exit burrs.

Tool: WGX13125R (ø125) Insert: SEMT13T3AGSR-FG (ACP200)
Cutting Conditions: v_c=660 SFM, f_z=0.008 IPT, a_p=0.04", a_e=4.0" Wet

● 4140 Machine Components

In heavy interrupted cutting of pocketed plates, the WGX Type achieves a longer tool life
with no breakages and a more favourable surface roughness than our competitors' products.

Tool: WGX13080R (ø80) Insert: SEMT13T3AGSR-H (ACP200)
Cutting Conditions: v_c=660 SFM, f_z=0.006 IPT, a_p=0.12" Dry

● 304 Stainless Machine Components

Cutting Distance: 27ft | Cutting Distance: 12ft

WGX Type | WGX Type | Competitor's Product

PVD coating, which has high hardness and excellent oxidation resistance,
provides stable tool wear and a tool life that is over twice as long as that of our competitors.

Tool
Cutter: WGX13100RS (ø100)
Insert: SEMT13T3AGSR-G (ACM300)
Cutting Conditions: v_c=492 SFM
f_z=0.006 IPT
a_p=0.08"
a_e=0.8in Dry

● 17-4PH Machine Components

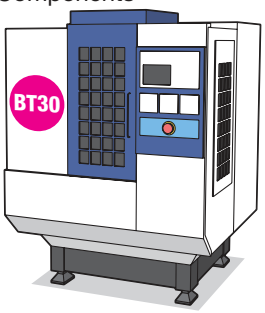
Cutting Distance: 50ft | Cutting Distance: 25ft

WGX Type | WGX Type | Competitor's Product

The high wear resistance of CVD coating provides stable tool wear and
at least double the tool life of our competitors' products.

Tool
Cutter: WGX13100RS (ø100)
Insert: SEMT13T3AGSR-G (ACM200)
Cutting Conditions: v_c=492 SFM
f_z=0.004 IPT
a_p=0.04"
a_e=3.0in Dry

● 1050 Machine Components



Stable cutting is achieved even with compact machines.

Comparison of Cutting Force

	Cutting Width a_e			
	0.4in	0.8in	0.12in	0.16in
WGX Type	○	○	○	○
Competitor's Product	○	○	Spindle stoppage	Spindle stoppage

Machine: Machining center BT30
Tool: WGX13063RS (ø63) Insert: SEMT13T3AGSR-L (ACP200)
Cutting Conditions: v_c=984 SFM, f_z=0.004 IPT, a_p=0.16" Dry

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter. * Sizes ø160 mm and above do not have coolant holes.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

N·m Recommended Tightening Torque (N·m)

■ General Features

SEC-Sumi Dual Mill DGC Type employs double-sided inserts with up to 16 corners for excellent economy. This is a general-purpose cutter featuring high cutting edge strength for high efficiency milling and a low-burr chipbreaker design that provides high machined surface quality.

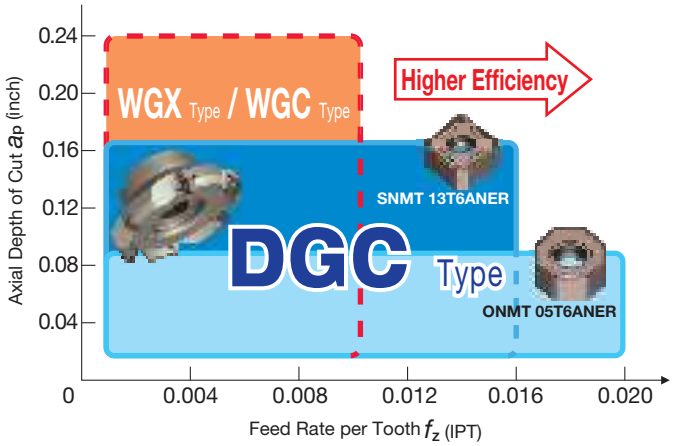
The DGC Type insert lineup includes double-sided SNMT/SNET and ONMT/ONET types. Up to 16 corners can be used for improved economy.

■ Features

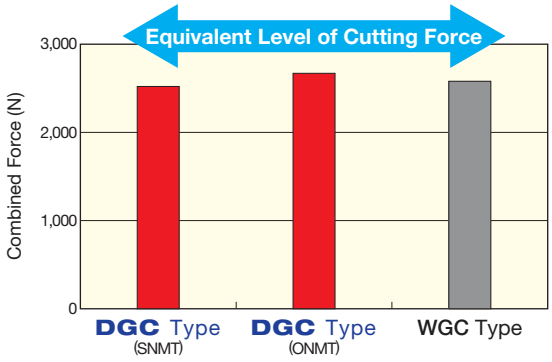
● Same cutting performance as single-sided inserts plus superior economy

Achieves levels of cutting edge sharpness and machined surface quality equivalent to single-sided cutters at a maximum depth of cut of a_p = 0.12".

● Recommended Cutting Conditions for General Steel



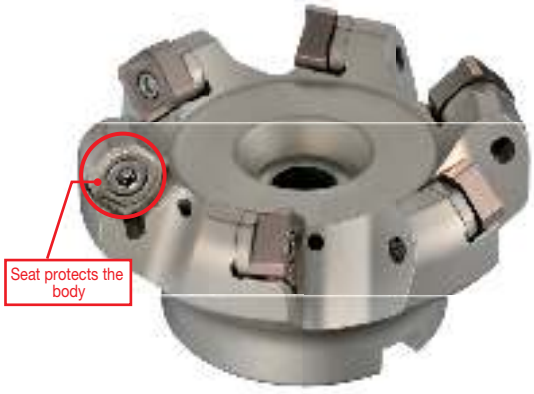
● Comparison of Cutting Force



Work Material: 4130 Structural Steel Tool: ø4.000"
Cutting Conditions: V_c = 650 SFM, f_z = 0.012 IPR, a_p = 0.12", a_e = 3.35"

● Common Body Features

Two types of inserts can be used with a single body depending on the milling application, to help reduce tool costs.



Use two types of insert for different applications

● Choose a tool to suit your application from a comprehensive lineup

Standard Pitch	Fine Pitch	Extra Fine Pitch	Endmill Type
Cutter Diameter: ø2.000" to ø10.000" ø40mm to ø250mm	Cutter Diameter: ø2.000" to ø8.000" ø50mm to ø250mm	Cutter Diameter: ø2.000" to ø8.000" ø50mm to ø250mm	Cutter Diameter: ø2.000" to ø2.500" ø40mm to ø63mm
No. of Teeth: 3 to 10	No. of Teeth: 4 to 14	No. of Teeth: 5 to 18	No. of Teeth: 3 to 4

■ Grade Application Range

Work Material	Grade	Finishing to Light Cutting	Medium Cutting	Rough to Heavy Cutting
P Steel	Coated Carbide	ACP100	ACP200	ACP300
	Cermet		T4500A	
M Stainless Steel	Coated Carbide	ACM200		ACM300

Work Material	Grade	Finishing to Light Cutting	Medium Cutting	Rough to Heavy Cutting
K Cast Iron	Coated Carbide	ACK200	ACK300	
N Non-Ferrous Metal	Coated Carbide		DL1000	
	Carbide			EH520

The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated

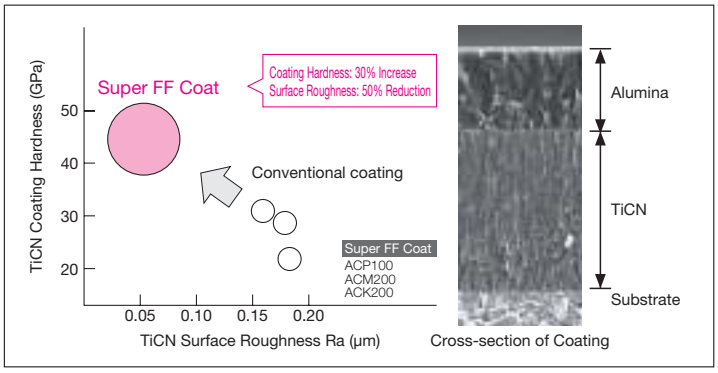
■ Coating Features

C Super FF Coat (CVD: Chemical Vapor Deposition)

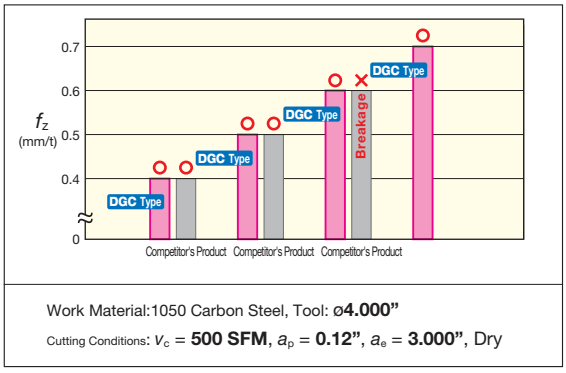
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology

- Achieves excellent chipping resistance with smooth coating and our coating stress control technology
- High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer
- Achieves more than double the tool life of conventional tools under the same cutting conditions

Characteristics of the Coating Layer



Fracture Resistance



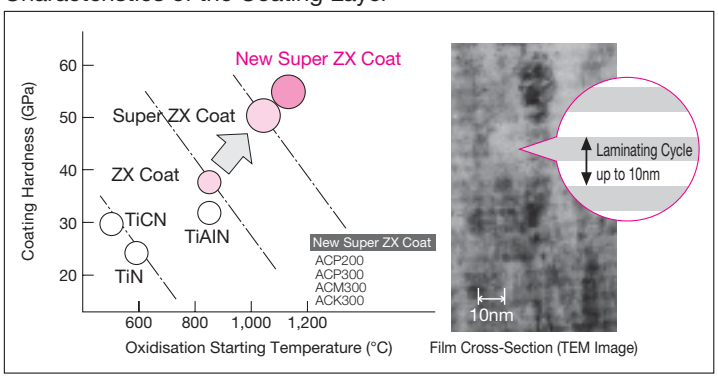
Work Material:1050 Carbon Steel, Tool: ø4.000"
Cutting Conditions: V_c = **500 SFM**, a_p = **0.12"**, a_e = **3.000"**, Dry

P New Super ZX Coat (PVD: Physical Vapor Deposition)

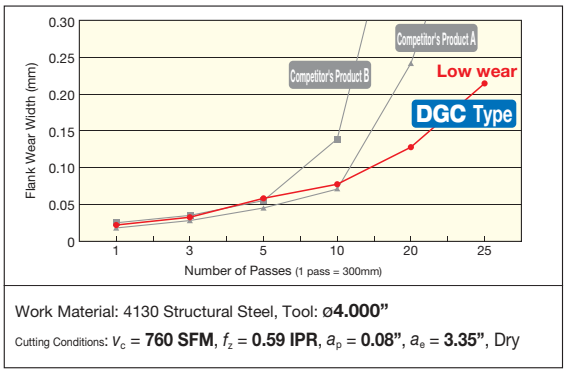
Employs our super multi-layered New Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-thin (1 nanometer = 1 billionth of a meter) layers.

- Compared to conventional tools, the coating hardness has been increased by 40% and the oxidation starting temperature has been increased by 200°C.
- Enables more than 1.5 times the machining speed and efficiency of conventional tools.
- Achieves more than double the tool life of conventional tools under the same cutting conditions

Characteristics of the Coating Layer



Wear Resistance



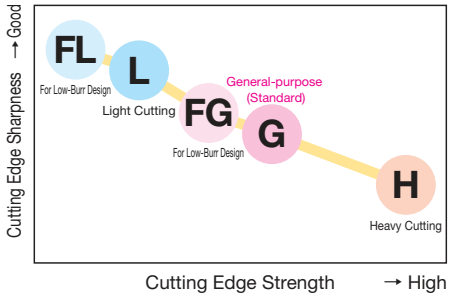
Work Material: 4130 Structural Steel, Tool: ø4.000"
Cutting Conditions: V_c = **760 SFM**, f_z = **0.59 IPR**, a_p = **0.08"**, a_e = **3.35"**, Dry

■ Chipbreaker Selection

Work Material	P M K S					N	P K
Chipbreaker	FL Type	L Type	FG Type	G Type	H Type	S Type	W Type
Appearance							
Cutting Edge Cross Section	 30°	 30°	 25°	 25°	 25°	 30°	 25°
8 / 16	Not Available	 30°	Not Available	 23°	Not Available	Not Available	Double-Sided, 2 Corners (*)
Features	Low Resistance / With Wiper Edge	Low Resistance	Standard / With Wiper Edge	Standard	High Strength	High Rake	Wiper
Applications	Light Cutting / Burr Prevention	Light Cutting	General-purpose / Burr Prevention	General-purpose	Heavy Cutting	Non-ferrous Metal	Finishing Surface Roughness Emphasised

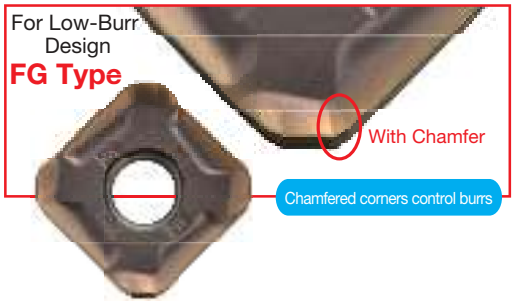
*Can only be used in conjunction with 8 corner inserts

■ Chipbreaker Selection Guide

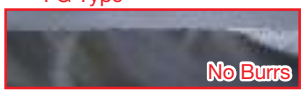


● Improved Milling Quality

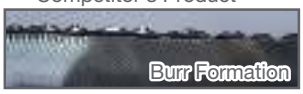
· FG type chipbreakers feature a chamfered corner to minimise burrs and provide excellent milling quality.



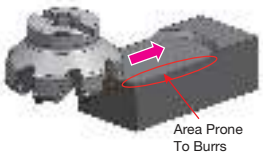
● FG Type



● Competitor's Product

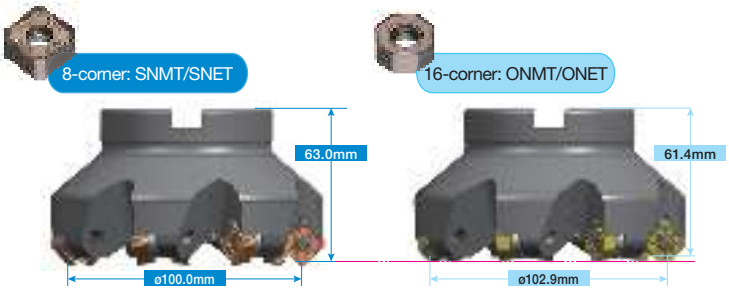


FG type inserts with low-burr design enable high-quality milling with few burrs and minimal edge chipping



Work Material : 4135
Tool : ø100
Cutting Conditions : V_c=660 SFM, f_z =0.008 IPT
a_p=0.12in, a_e=3.35in

Cutter Diameter And Cutting Edge Height

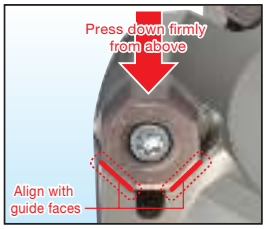


⚠ Note that while the 8-corner and 16-corner types can be used interchangeably on the same body, they have different cutter diameters, cutting edge heights and maximum cutting depths.

Body Shape (Example: With Cutter Diameter of 100mm)

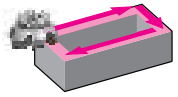
Insert	Cutter Dia. DC (mm)	Cutting Edge Height LF (mm)	Maximum Depth of Cut APMX (mm)
SNMT / SNET	100.0	63.0	6.0
ONMT / ONET	102.9	61.4	3.0

16-corner Mounting Method



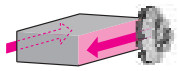
⚠ Firmly align insert with guide faces, press down in the direction of the arrow, and tighten the screw to fix the insert.

■ Application Examples



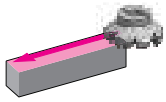
Part/ Work Material		Machine Components / 1050	
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13080R (ø80)	ø80
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (4 Corners)
	Number of Teeth	6	6
	Insert Grade	ACP200	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	525	525
	Feed Rate per Tooth (IPT)	0.012	0.012
	Feed Rate (IPM)	47	47
	Axial Depth of Cut (in)	0.12	0.12
	Number of Workpieces (pcs/corner)	2	2
	Dry/Wet	Wet	Wet

Can be used under the same conditions as the single-sided inserts. Improves tool economy by doubling the number of cutting edges.



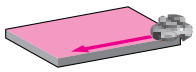
Part/ Work Material		Machine Components / 1050	
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13160R (ø160)	ø160
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (8 Corners)
	Number of Teeth	10	10
	Insert Grade	ACP200	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	440	440
	Feed Rate per Tooth (IPT)	0.005	0.005
	Feed Rate (IPM)	14	14
	Axial Depth of Cut (in)	0.1	0.1
	Cutting Time	287 min	287 min
	Dry/Wet	Dry	Dry

Reduces burrs and achieves higher milling quality compared to conventional tools



Part/ Work Material		Machine Components / 1050	
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13125R (ø100)	ø125
	Insert	SNET13T6ANER-G (16 Corners)	Single-Sided Specification (8 Corners)
	Number of Teeth	8	8
	Insert Grade	ACM300	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	525	525
	Feed Rate per Tooth (IPT)	0.01	0.01
	Feed Rate (IPM)	37	37
	Axial Depth of Cut (in)	0.1	0.1
	Cutting Time	-	-
	Dry/Wet	Dry	Dry

Reduces tool cost by doubling the number of cutting edges



Part/ Work Material		Machine Components / 1050	
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13100R (ø100)	ø100
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (4 Corners)
	Number of Teeth	5	5
	Insert Grade	ACM300	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	492	492
	Feed Rate per Tooth (IPT)	0.006	0.006
	Feed Rate (IPM)	14	14
	Axial Depth of Cut (in)	0.08	0.08
	Cutting Time	-	-
	Dry/Wet	Wet	Wet

Doubles the number of cutting edges and provides over 3 times longer tool life per corner compared to conventional tools.

( ) indicates value for ONMT / ONET type inserts.

★ Worldwide Warehouse item

Inserts are sold separately. * Sizes ø160 mm and above do not have coolant holes.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

High-efficiency Face Milling Cutters for Cast Iron and Cast Steel

■ Features

- Achieves high efficiency milling with a max. 0.31" depth of cut
- Employs negative inserts with chipbreakers that have a strong cutting edge on the double negative type body. Economical design using 8 corners
- Supports general to high-efficiency high-feed milling with three body types Inserts can be used with all types

Negative inserts with a rake angle achieve low resistance and high feed milling

■ Product Range

DNX(F) Type

General-purpose Type

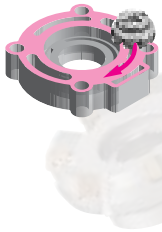
P	Carbon Steel	180to 280 HB	150-**175**-200	0.10-**0.45**-0.80	ACP200
	Alloy Steel	180to 280 HB	150-**175**-200	0.10-**0.35**-0.60	ACP200

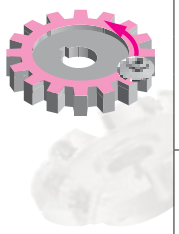
Note For DNHS Type, insert heights are alternatively placed, so the actual feed rate per tooth is double. Use with f_z = 0. 5 mm/t (actual feed rate 1.0 mm/t) as the upper limit.
The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

■ Application Examples



Part Material		Automotive Components Grey Cast Iron	
Used Equipment		Machining Centre (BT30)	
Tool	Type	DNXF Type	Conventional Tool
	Body	DNXF 43000R	Cutter for FC
	Insert	G Type	Negative Insert
	Tool Dia. (in)	3	3
	Number of Teeth	8	8
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	656	656
	Feed Rate per Tooth (IPT)	0.03 (v_f = 16.5 IPM)	0.03 (v_f = 16.5 IPM)
	Axial Depth of Cut (mm)	0.06	0.06
	Cutting Width (in)	2.4	2.4
	Dry/Wet	Wet	Wet

Double the tool life of conventional tools under the same conditions.



Part Material		Construction Machine Component / Cast Steel	
Used Equipment		Machining Centre (BT50)	
Tool	Type	DNHS Type	Conventional Tool
	Body	DNHS 12100R	General-purpose Cutter
	Insert	H Type	Negative Insert
	Tool Dia. (mm)	100	100
	Number of Teeth	8 (4)*	7
	Insert Grade	ACP200	P Class CVD
Cutting Conditions	Cutting Speed (SFM)	560	560
	Feed Rate per Tooth (IPTt)	0.01 (v_f = 17.7 IPM)	0.004 (v_f = 11.8 IPM)
	Axial Depth of Cut (in)	0.12" to 0.16"	0.12" to 0.16"
	Cutting Width (in)	1.97	1.97
	Dry/Wet	Dry	Dry

Enables 1.5 times the efficiency of conventional tools.

*( ) indicates effective no. of teeth

Part Material		Electrical Appliance Component Grey Cast Iron	
Used Equipment		Machining Centre (BT50)	
Tool	Type	DNXF Type	Conventional Tool
	Body	DNXF 44000R	Cutter for FC
	Insert	H Type	Negative Insert
	Tool Dia. (in)	4	4
	Number of Teeth	10	10
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	1030	1030
	Feed Rate per Tooth (IPT)	0.006 (v_f = 60 IPM)	0.004 (v_f = 43.3 IPT)
	Axial Depth of Cut (in)	0.06	0.06
	Cutting Width (in)	3	3
	Dry/Wet	Wet	Wet

1.4 times the milling efficiency and 1.3 times the tool life of conventional tools.

Part Material		Housing - Grey Cast Iron	
Used Equipment		Machining Centre (BT50)	
Tool	Type	DNX Type	Conventional Tool
	Body	DNX 46000R	General-purpose Cutter
	Insert	G Type	Positive Insert
	Tool Dia. (inch)	6	6
	Number of Teeth	10	10
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	790	790
	Feed Rate per Tooth (IPT)	0.006 (v_f = 23.5 IPM)	0.004 (v_f = 15.6 IPM)
	Axial Depth of Cut (in)	0.12	0.12
	Cutting Width (in)	5.3	5.3
	Dry/Wet	Wet	Wet

1.5 times longer tool life than conventional tools.

■ Precautions when Using Wiper Inserts with Holes

- When assembling the wiper insert, attach it as shown in Fig. 1. When attached as shown in Fig. 2, normal machined surface roughness cannot be obtained.
- Wiper inserts are single-cornered and double-sided.
- Refer to Technical Guidance page N19 in the General Catalogue for details about wiper inserts.
- Do not use with DNHS and DNH types.

MEMO

■ Features

- **Supports Various Machining Operations**

  Applicable to various machining applications, the cutter lineup includes diameters of ø0.50" to 6.00" (14 to ø160mm), enabling large ramping.

- **Excellent Machining Quality**

  With a combination of optimized cutting edge shape and high-precision molding technology, superb wall surface accuracy and surface finish quality are achieved.

- **Excellent Sharpness with Low Resistance**

  Reduces machining noise and suppresses burrs.

  Lineup includes ground inserts with a focus on sharpness.

- **General-purpose Grade Applicable to Most Part Materials**

  Introducing the new grade ACU2500, supporting machining in a wide range of fields and applicable to steel, stainless steel, and cast iron.

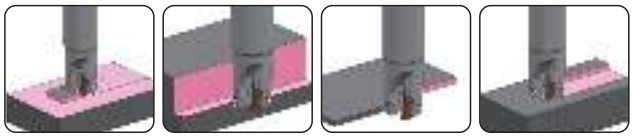
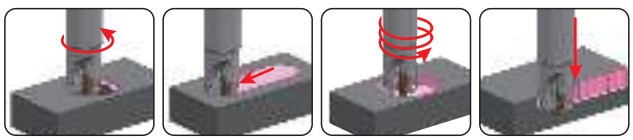
■ Applicable to Various Applications

- **Supports Ramping/Helical Milling/Plunge Cutting**

Face Milling | Shoulder Milling | Side Milling | Slot Milling



Hole Expansion Drilling | Ramping | Helical Milling | Plunge Cutting



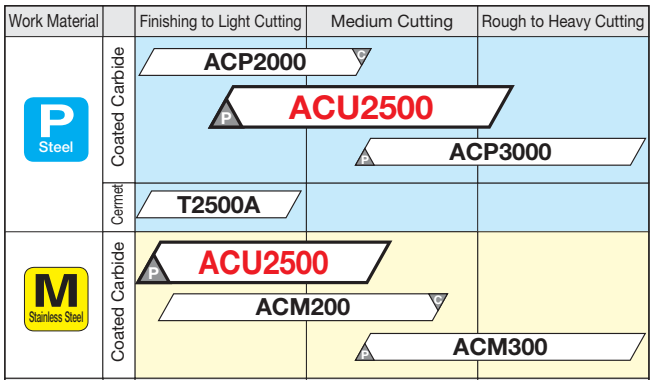
■ Optimized Body Design

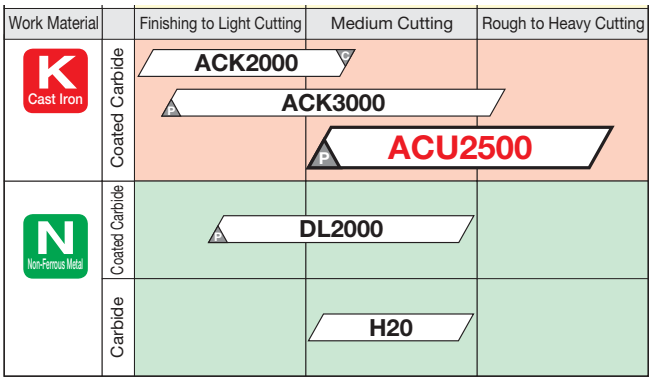
- **Wide Guide Face for Stable Insert Clamping**

■ Grade Application Range

Newly developed general-purpose ACU2500 grade suitable for various work materials has now been released.

Enhanced lineup of coatings, cemented carbide and cermet for milling steel, stainless steel, cast iron, and aluminum alloy



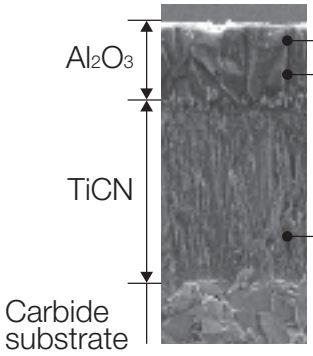


The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD P: PVD

■ Grade Features

New Absotech™ (absolute technology) coating technology that provides absolute stability

ABSOTECH CVD



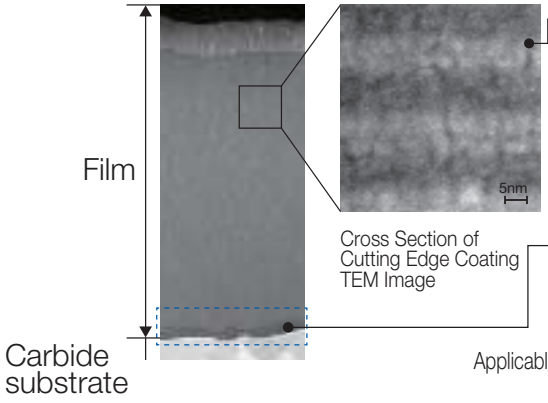
Special Surface Treatment
Suppresses thermal cracking by introducing high compressive stress, resulting in chipping resistance more than twice as good as conventional types

Crystal Orientation Control Al_2O_3
By controlling the growth direction, Al_2O_3 is reinforced for crater wear resistance more than twice as good as conventional types

High Hardness TiCN
Increased TiCN hardness by using a C-rich composition for flank wear resistance more than twice as good as conventional types

Applicable Grades: ACP2000, ACK2000

ABSOTECH PVD



Cross Section of Cutting Edge Coating TEM Image

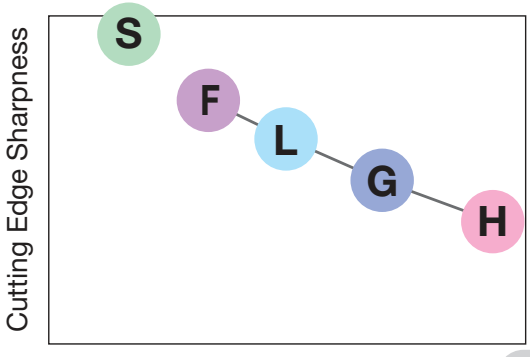
New Super Multi-Layered Composition
Higher hardness and twice the conventional wear resistance due to a fine crystal structure AlTiCrBN-based nano-layered coating

High Adhesion Strength
Significantly improved coating adhesion Chipping resistance more than twice as good as conventional types

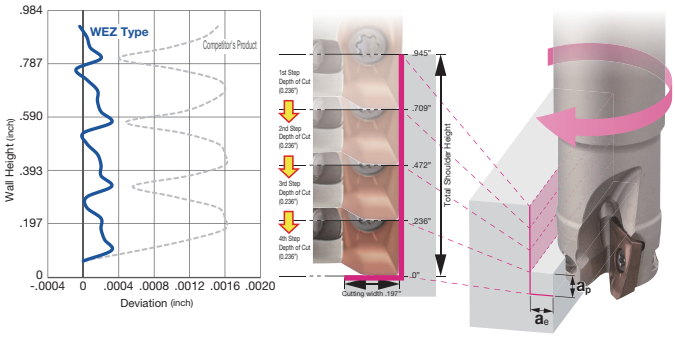
Applicable Grades: ACU2500, ACP3000, ACK3000

■ Chipbreaker Lineup

Work Material	P M K S H N				
	L Type	G Type	H Type	F Type	S Type
Chipbreaker					
Cutting Edge Cross Section 11 Type	Not Available	28°	20°	28°	28°
Cutting Edge Cross Section 17 Type	28°	20°	10°	28°	28°
Applications	Light Cutting Low-rigidity Milling	Main Chipbreaker General-purpose to Interrupted Milling	Heavy Cutting Heavy interrupted machining Hardened Steel	Light Cutting Medium Finishing Low-burr design	For Non-Ferrous Metals

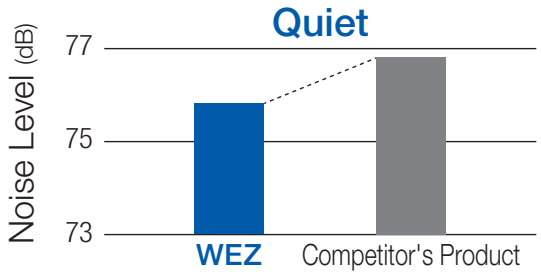


■ Excellent Wall Accuracy



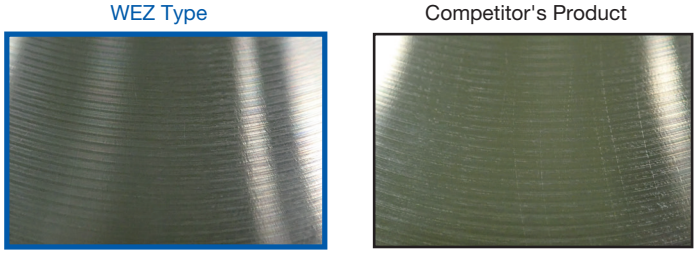
Machine: Vertical Machining Center BT40, Part Material 1050 Steel
Tool: WEZ 11020E03 (ø20, 3 flutes)
Insert: AOMT 11T308PEER-G (ACU2500)
Cutting Conditions: v_c = 492 SFM, f_z = 0.006" IPT, a_p=0.236" x 4 Passes, a_e= 0.197" Dry

■ Lower cutting force helps reduce machining noise



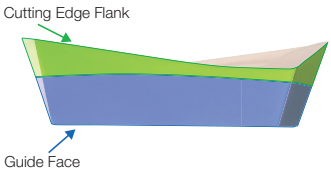
Machine: Vertical Machining Center BT40, Part Material 1050 Steel
Tool: WEZ 11020E03 (ø20, 3 flutes)
Insert: AOMT 11T308PEER-G (ACU2500)
Cutting Conditions: v_c = 492 SFM, f_z = 0.006" IPT, a_p=0.315", a_e= 0.157" Dry

■ Improved Milling Quality



■ High-precision ground class insert with excellent sharpness

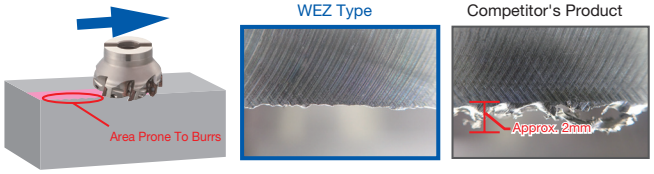
- Ground finish on cutting edge and guide face
  The guide face has a ground finish as well as the cutting edge, minimizing corner difference when mounting on the body.
  Stable runout precision and machining quality



■ Lineup of Chipbreakers for Ground Inserts

- F Type high rake chipbreaker specialized for sharpness and machining accuracy

· Sharpness from ground finish enables burr control
· Good wall accuracy with all diameters



Machine: Vertical Machining Center BT50, Part Material 304 Stainless Steel
Tool: WEZ 11050RS07 (ø50, 7 flutes)
Insert: AOET 11T308PEER-F (ACU2500)
Cutting Conditions: v_c = 394 SFM, f_z = 0.005 IPT, a_p=0.039", a_e= 1.18" Dry

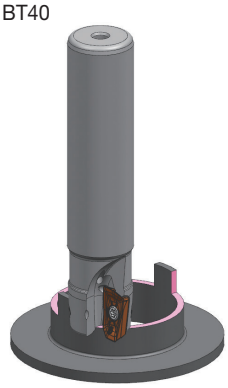
- S Type sharp edge chipbreaker for non-ferrous metals, with excellent adhesion resistance

· Suppresses adhesion with rake face lapping
· DLC Coat inserts available for further improved adhesion resistance

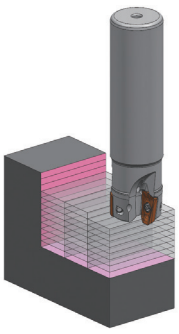
Machine: Vertical Machining Center BT30, Part Material: A383 Aluminum
Tool: WEZ 11020E03 (ø20, 3 flutes)
Insert: AOET 11T308PEFR-S (H20)
Cutting Conditions: v_c = 1,148 SFM, f_z = 0.0039 IPT, a_p=0.118", a_e= 0.393" Dry

■ Application Examples

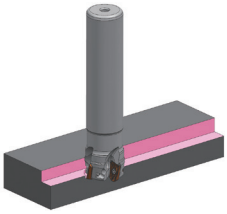
1040 Steel Hub		Sumitomo	Competitor's Product
Vertical Machining Center BT40	Tool	WEZ17025E02	Double-sided, 4 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	25	25
	Number of Teeth	2	2
	v_c (SFM)	394	394
	v_f (IPM)	11.81	11.81
	f_z (IPT)	0.0026	0.0026
	a_p (inch)	0.354	0.354
	a_e (inch)	0.197	0.197
	Coolant	Wet	Wet
	Results	The high chattering sound typical of thin workpieces is gone, and stable machining enables longer tool life.	



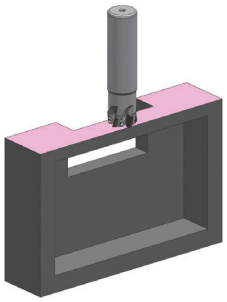
1050 Steel Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ17032E03	Single-Sided 2 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	32	32
	Number of Teeth	3	3
	v_c (SFM)	246	246
	v_f (IPM)	8.86	8.86
	f_z (IPT)	0.004	0.004
	a_p (inch)	0.157	0.157
	a_e (inch)	0.866	0.866
	Coolant	Wet	Wet
	Results	Drastically reduced cutting edge damage with same number of output. Able to continue use, tool life increased.	



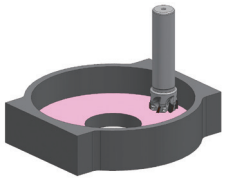
304 Stainless Steel Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT40	Tool	WEZ11028E04	–
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	28	28
	Number of Teeth	4	4
	v_c (SFM)	492	492
	v_f (IPM)	53.15	53.15
	f_z (IPT)	0.008	0.008
	a_p (inch)	0.079	0.079
	a_e (inch)	0.394	0.394
	Coolant	Dry	Dry
	Results	Tool life increased. Stable machining achieved.	



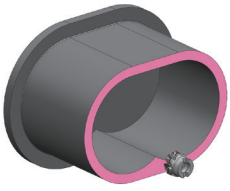
Gray Cast Iron Mounting base		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ11032E05	Single-Sided 2 Corners
	Grade	ACK3000	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	32	32
	Number of Teeth	5	4
	v_c (SFM)	722	722
	v_f (IPM)	43	43
	f_z (IPT)	0.004	0.004
	a_p (inch)	0.079	0.079
	a_e (inch)	0.787	0.787
	Coolant	Dry	Dry
	Results	Efficiency increased. Even thin areas can be machined without chatter.	



Gray Cast Iron Housing		Sumitomo	Competitor's Product
5-axis Control Vertical Machining Center HSK-A63	Tool	WEZ11040E06	–
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	40	40
	Number of Teeth	6	6
	v_c (SFM)	656	656
	v_f (IPM)	51.18	51.18
	f_z (IPT)	0.005	0.005
	a_p (inch)	0.004	0.004
	a_e (inch)	0.0787	0.0787
	Coolant	Wet	Wet
	Results	Stable machining is possible even for thin workpieces or low-rigidity machines.	



Gray Cast Iron Machine Component		Sumitomo	Competitor's Product
Horizontal Machining Center: BT50	Tool	WEZ11050RS07	Single-Sided 2 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (mm)	50	50
	Number of Teeth	7	5
	v_c (SFM)	591	591
	v_f (IPM)	31.69	31.69
	f_z (IPT)	0.004	0.004
	a_p (inch)	0.012	0.012
	a_e (inch)	0.394	0.394
	Coolant	Wet	Wet
	Results	Quiet machining sounds for improved machining efficiency. Good surface finish quality with 3µm parallelism and 4µm flatness.	



■ Recommended Cutting Conditions

WEZ11 Type

Tool: WEZ11020E03, Insert: AO□T11T3 Type

Cutting Conditions: Depth of Cut a_p = 0.118", Cutting Width a_e = 0.393", Dry

N	Copper Alloy		S									985 - 1,265	985 - 1,265

- The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, work material shape, clamping system).
- For groove milling, adjust the feed rate to around 70% of the above values.

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work material rigidity, depth of cut and other factors.

*For H20, use coolant to prevent adhesion

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

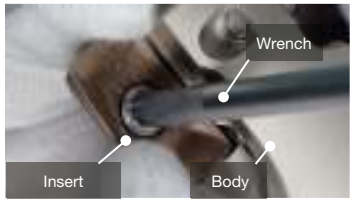
Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert solidly against the seat surface,tighten the screws with the included wrench.
(3) Apply Anti-seize paste to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.



＊When mounting inserts with nose radius of 3.0 or above, modification of the body is required.

Reworking guidelines
Nose radius = 3.0: C1
(AOMT11T330PEER)
Nose radius = 3.2: C1
(AOMT11T332PEER)
Standard: R1.

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

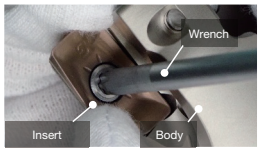
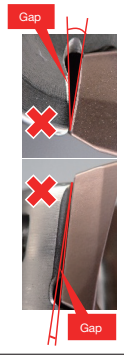
Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert solidly against the seat surface,tighten the screws with the included wrench.
(3) Apply Anti-seize paste to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.





*When mounting inserts with nose radius of 3.0 or above, modification of the body is required.

Reworking guidelines
Nose radius = 3.0: C1
(AOMT170530PEER)
Nose radius = 3.2: C1
(AOMT170532PEER)
Nose radius = 4.0: C2
(AOMT170540PEER)
Nose radius = 5.0: C5
(AOMT170550PEER)
Nose radius = 6.4: C5
(AOMT170564PEER)
Standard: R1.

Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert solidly against the seat surface,tighten the screws with the included wrench.
(3) Apply Anti-seize paste to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.

*When mounting inserts with nose radius of 3.0 or above, modification of the body is required.

Modify this edge.

Reworking guidelines
Nose radius = 3.0: C1
(AOMT11T330PEER)
Nose radius = 3.2: C1
(AOMT11T332PEER)
Standard: R1.

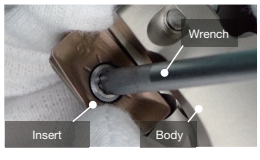
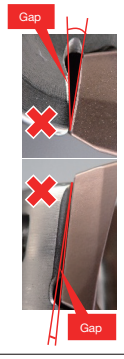
Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert solidly against the seat surface,tighten the screws with the included wrench.
(3) Apply Anti-seize paste to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.





＊When mounting inserts with nose radius of 3.0 or above, modification of the body is required.

Reworking guidelines
Nose radius = 3.0: C1
(AOMT170530PEER)
Nose radius = 3.2: C1
(AOMT170532PEER)
Nose radius = 4.0: C2
(AOMT170540PEER)
Nose radius = 5.0: C5
(AOMT170550PEER)
Nose radius = 6.4: C5
(AOMT170564PEER)
Standard: R1.

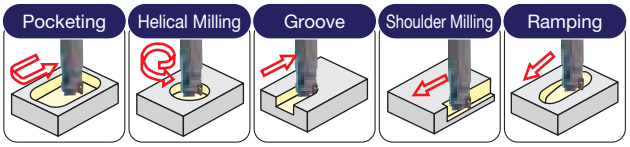
■ General Features

An insert with a strong cutting edge design coupled with a high rigidity body, for stable and high efficiency milling with low resistance. The improved body and insert accuracy provides high accuracy and smooth surface finish, supporting various machining with a selection of 6 types of chipbreakers and 9 milling grades.

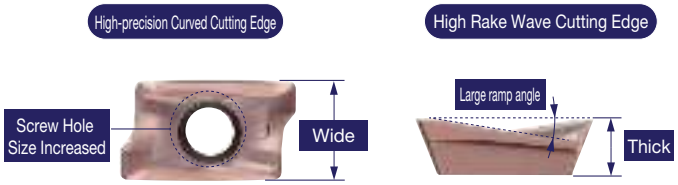
Compatible with Wide Range of Milling



■ Features

Higher Accuracy Cutting Edge with Both Sharpness and Cutting Edge Strength

Unique curved cutting edge design lowers cutting force yet improves cutting edge strength. Achieves high quality machined surface with high precision cutting edge.
Smooth deep groove milling even with low-rigidity machines



Coolant Holes are a Standard Feature for the Whole Series

Improved chip evacuation with air or coolant supply.

Highly Durable Body

Special surface treatment improves corrosion resistance and scratch resistance.
Increased screw size improves clamping force and durability

WEX1000 Series

Fine-pitched and high efficiency milling is possible at a small machining cost.

Wide Variety of Inserts

6 types of chipbreakers and 9 milling grades available for a wide range of applications and work materials

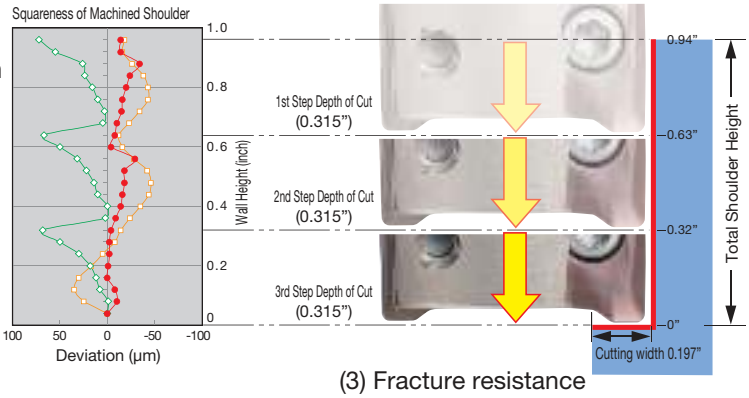
■ Cutting Performance

(1) Shoulder milling precision

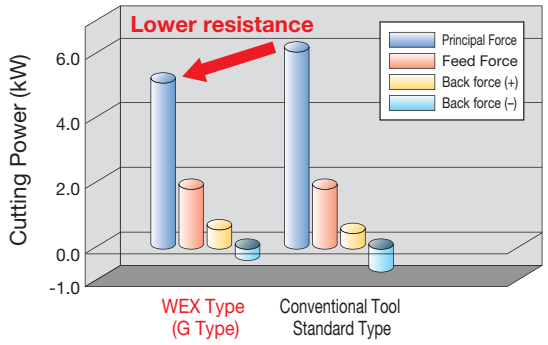
High-precision cutting edges provide very small step marks
(less than half that of competitors' products)



Cutting Conditions
Part Material: A36
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=492 SFM
Feed Rate: f_z=0.006 IPT (v_f=26.57 IPM)
Cutting Width: a_e=0.197"
Depth of Cut: a_p=0.315" x 3 times
Dry

(2) Cutting force

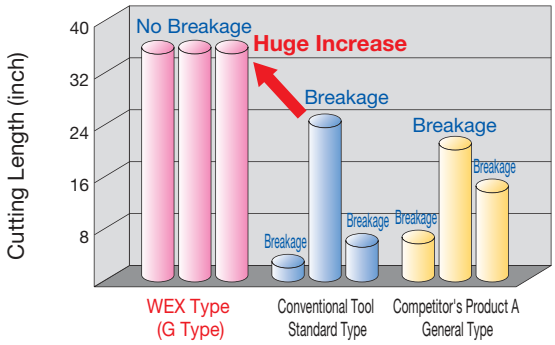
Cutting force (principal force) is approximately 15% lower than conventional tools



Cutting Conditions
Part Material: 1050
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=656 SFM
Feed Rate: f_z=0.008" IPT (v_f=47 IPM)
Cutting Width: a_e=0.315"
Depth of Cut: a_p=0.40" , Dry

(3) Fracture resistance

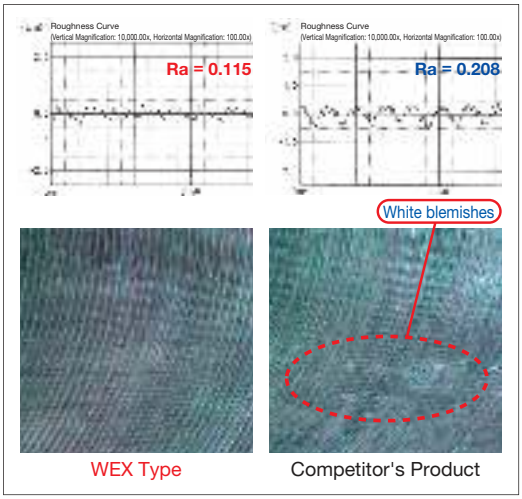
Huge increase in fracture resistance with improved cutting edge strength



Cutting Conditions
Part Material: 4140
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=328 SFM
Feed Rate: f_z=0.016" IPT (v_f=49.6 IPM)
Cutting Width: a_e=0.984"
Depth of Cut: a_p=0.12, Dry

(4) Surface roughness (aluminum alloy milling)

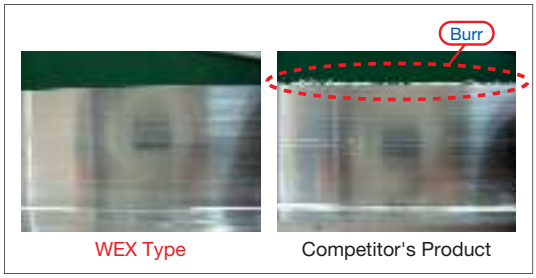
Smooth surface finish free of white blemishes



Cutting Conditions
Work Material: A5052
Tool: WEX3032E (ø32)
Insert: AXET170504PEFR-S (H1)
Cutting Speed: v_c=2,625 SFM
Feed Rate: f_z=0.004" IPT (v_f=94.5" IPM)
Cutting Width: a_e=0.63"
Depth of Cut: a_p=0.40" , Dry

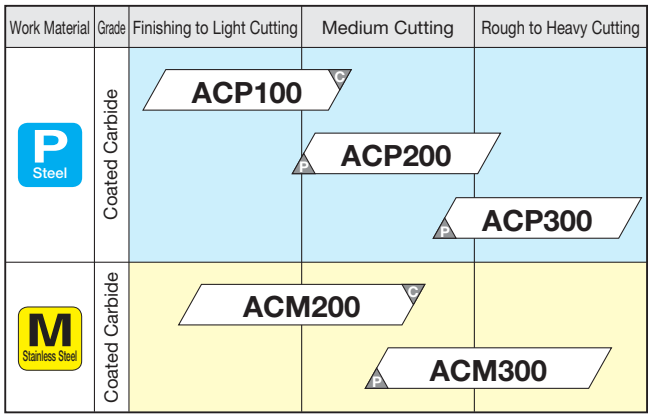
(5) Wall surface burrs (aluminum alloy milling)

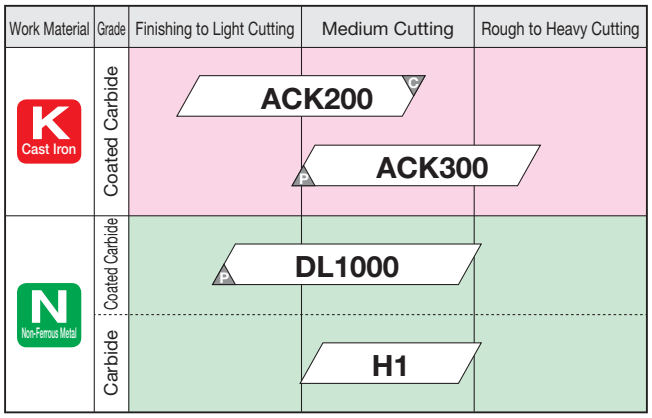
High rake edge significantly reduces burrs.



Cutting Conditions
Part Material: A5052
Tool: WEX3032E (ø32)
Insert: AXET170504PEFR-S (H1)
Cutting Speed: v_c=2,625 SFM
Feed Rate: f_z=0.004" IPT (v_f=94.5" IPM)
Cutting Width: a_e=0.197"
Depth of Cut: a_p=0.472" , Dry

■ Grade Application Range





The letters "C" and "P" at the end of each grade indicate the coating type. ▽: CVD, △: PVD, Blank: Uncoated

■ Chipbreaker Lineup

Work Material	P K			M S		N
	L Type	G Type	H Type	E Type	EH Type	S Type
Chipbreaker						
Features	Low Cutting Force	General-purpose Type	High Strength Type	General-Purpose Type For Exotic Alloys	Strong Edge Type For Exotic Alloys	High Rake Type
1000 Series Cross Section	 25°	 25°	 15°	–	–	 25°
2000 Series Cross Section	–	 28°	 20°	 17°	 17°	 27°
3000 Series Cross Section	 25°	 20°	 5°	 14°	 8°	 30°
Applications	Light Cutting, Low Rigidity Milling and Reduction of Burrs	**Main Chipbreakers** General-purpose to Interrupted Milling	Roughing, Heavy Interrupted Cutting and Hardened Steel Milling	Light Cutting to General Purpose	Heavy Interrupted Machining	For Aluminum Alloy and Non-Ferrous Metal

■ Chipbreaker Selection Guide

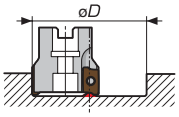
■ Recommended Values for Helical Milling and Ramping

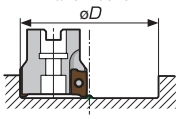
Precautions for Helical Milling

For Minimum Diameter and Below øD



Center uncut portion cannot be removed by traverse cutting with the same cutter

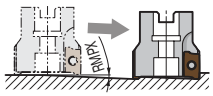
For Maximum Diameter and Above øD



Center uncut portion can be removed by traverse cutting with the same cutter

Precautions for Ramping

Use at the RMPX below or lower



Recommended Values for Helical Milling and Ramping

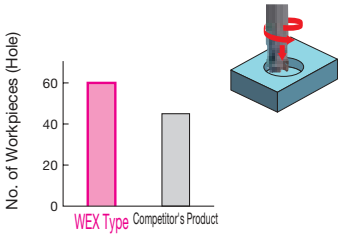
The above table shows the recommended values for 0.8mm nose radius bits.

■ Application Examples

● Machine Components 304 Stainless

WEX1000

The WEX type achieves 1.3x longer tool life for helical milling compared to competitors' products.



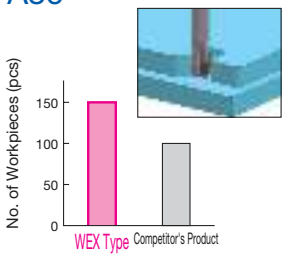
Tool: WEX1020E (ø20)
Insert: AXMT060204PDER-G
Grade: ACM300
Machine: Vertical machining centre BT30

(Cutting Conditions)
v_c=197 SFM
f_z =0.007" IPT
a_p=0.04"
Dry

● Machine Components A36

WEX1000

The WEX type has low cutting force and enables stable machining, while competitors' products have unstable power.
Achieves 1.5x longer tool life than competitors' products.



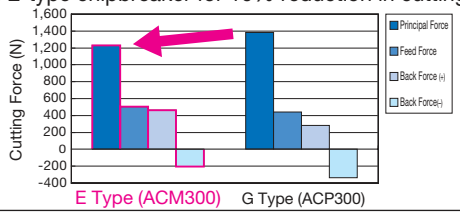
Tool: WEX1010EL (ø10)
Insert: AXMT060204PDER-L
Grade: ACP200
Machine: Vertical machining centre BT40

(Cutting Conditions)
v_c=525 SFM
f_z =0.003" IPT
a_p=0.197"
Dry

● Block Material 316 Stainless

WEX2000

Using an E-type chipbreaker for 10% reduction in cutting force.



Tool: WEX2050F (ø50)
Insert: AXMT123508PEER-E
Grade: ACM300

(Cutting Conditions)
v_c=591 SFM
f_z =0.006" IPT
a_e=0.787"
a_p=0.12" Dry

● Block Material 4140

WEX3000

Compared to competitors', the machined surface has fewer steps, enabling finishing without changing tool.

Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200

(Cutting Conditions)
v_c=656 SFM
f_z =0.006" IPT
a_e=0.197"
a_p=0.40" x 3 Times Dry

● Die Parts, Low Carbon Steel

WEX3000

The WEX type doubles the tool life of conventional tools by performing for longer without breakage.

Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP100

(Cutting Conditions)
v_c=495 SFM
f_z =0.008" IPT
a_e=0.984"
a_p=0.197" Wet

● Extrusion Mold P5 Tool Steel

WEX3000

Less cutting noise than conventional tools and excellent chip evacuation for stable cutting even if the cutting conditions are doubled.
Achieves a nice glossy machined surface.

Tool: WEX3080R (ø80)
Insert: AXMT170508PEER-G
Grade: ACP200

(Cutting Conditions)
v_c=246 SFM
f_z =0.0075" IPT
a_e=3.15"
a_p=0.197" Dry

● Machine Components 304 Stainless Steel

WEX3000

Cutting Distance: 177"
Cutting Distance: 65"

WEX Type (ACM300)
WEX Type (ACP300)
Competitor's Product A
Competitor's Product B

The substrate has excellent fracture resistance and the high hardness coating enables stable machining without breakage.

Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-E
Grade: ACM300

(Cutting Conditions)
v_c=492 SFM
f_z =0.006" IPT
a_e=0.40"
a_p=0.12"
Dry

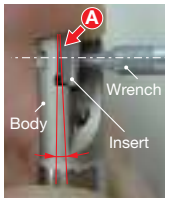
Precautions when Mounting WEX1000 Inserts

1



Press the top of the insert in the direction of A.

2

Hold down as shown in C so that there is no gap between the insert bottom and base of insert pocket, and tighten with wrench B (tightening torque 0.5N·m)

A dedicated torque wrench is optionally available (sold separately).

Parts

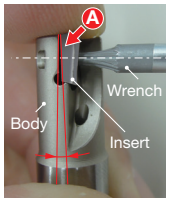
(Sold Separately)

Applicable Cutter	Flat Screw		Wrench	Anti-seizure Cream	Torque Wrench
		N·m			 0.5N·m
WEX1010E(EL) to WEX1025E	BFTX01804IP	0.5	TRX06IP	SUMI-P	TRDR06IP05

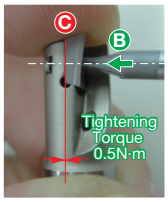
Precautions when Mounting WEX1000 Inserts

1



Press the top of the insert in the direction of A.

2



Hold down as shown in C so that there is no gap between the insert bottom and base of insert pocket, and tighten with wrench B (tightening torque 0.5N·m)

A dedicated torque wrench is optionally available (sold separately).

Parts

Applicable Cutter	Flat Screw		Wrench	Anti-seizure Cream
WEX3025E(EL) to 3030EL	BFTX0407IP	3.0	TRDR15IP	SUMI-P
WEX3032E(EL) to 3063E(ES)	BFTX0409IP	3.0	TRDR15IP	SUMI-P

N·m Recommended Tightening Torque (N·m)

* Modification of the cutter body is required when attaching a nose radius RE = 2.0 or 3.0 insert.

Modify this portion.
Reworking guidelines
For Nose Radius of 2.0: C1 (AXMT170520PEER)
For Nose Radius of 3.0: C1.5 (AXMT170530PEER)
Standard: C0.5.

High Efficiency Shoulder Milling of Deep Steps

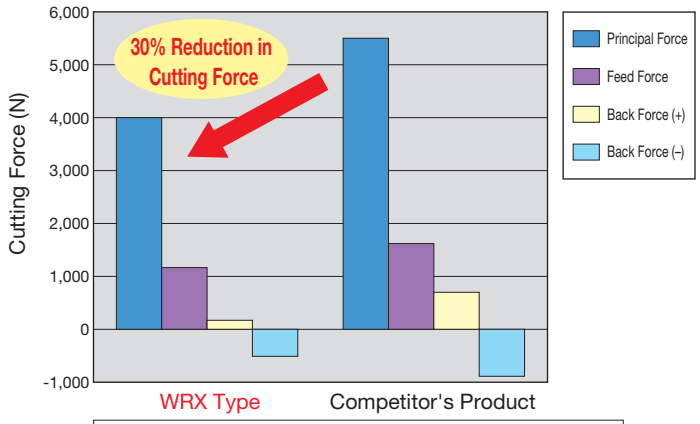
■ General Features

The WRX is an endmill that features cutting edges arranged in a repeater configuration. Its long cutting edges are arranged in multiple stages to enable high efficiency shoulder milling of deep steps.

■ Features

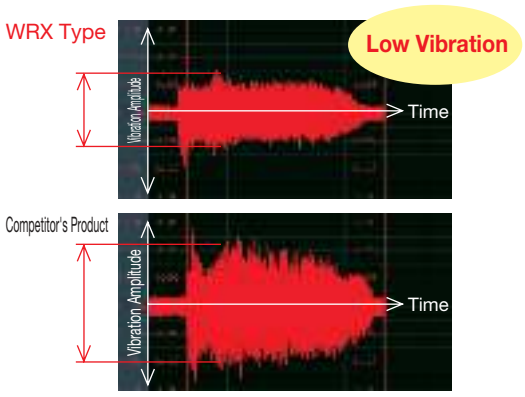
- Cutting edge positions are optimised to provide low resistance and low vibration

■ Comparison of Cutting Force



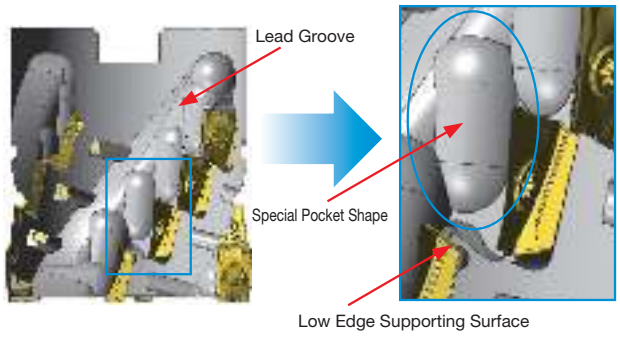
Cutting Conditions
Work Material: 1050
Tool: WRX2025E2725
Cutting Speed: v_c=330 SFM, f_z=0.006 IPT, a_e=0.4in, a_p=1.0in, Dry

■ Comparison of Vibration



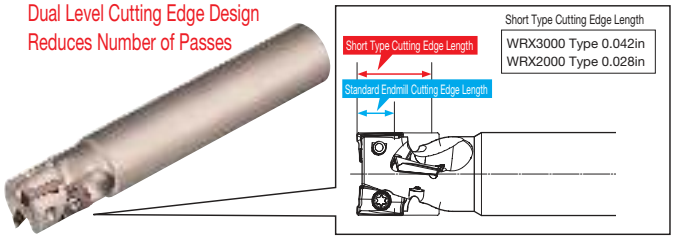
Cutting Conditions
Work Material: 1050
Tool: WRX3080RS5332
Cutting Speed: v_c=492 SFM, f_z=0.008 IPT, a_e=0.2in, a_p=1.6in, Dry

- Lead groove and special pocket shape provide smooth chip evacuation and high body rigidity
- Low edge supporting face reduces bottom edge breakage and provides high reliability



Short Cutting Head Series

Dual Level Cutting Edge Design
Reduces Number of Passes



■ Product Range - Inch

Type	Series Code	Cutting Edge Length (in.)	Dia. (in.)	Shape	Applicable Insert (*)
Shank Type	WRX2000E	1.5 - 2.126	ø1.0 to ø1.5	Weldon Type	AXMT1235 Type
	WRX3000E	2.500	ø2.00		AXMT1705 Type
Shell Type	WRX2300R	2.50 - 3.00	ø2.500 to ø3.00	Shell Type	

■ Product Range- Metric

Cutting Edge	Series Code	Cutting Edge Length (mm)	Dia. (mm)	Shape	Applicable Insert (*)
Standard Type	WRX2000E	27 to 36	ø20 to ø40	Shank Type	AXMT1235 Type
	WRX2000R	36	ø40 to ø50	Mounting Hole Type	
	WRX3000E	40 to 53	ø40 to ø50	Shank Type	AXMT1705 Type
	WRX3000R	53	ø50 to ø100	Mounting Hole Type	
Short Cutting Edge Type	WRX2000E	18	ø20 to ø40	Shank Type	AXMT1235 Type
	WRX2000R		ø40 to ø50	Mounting Hole Type	
	WRX3000E	27	ø40 to ø50	Shank Type	AXMT1705 Type
	WRX3000R		ø50 to ø100	Mounting Hole Type	

* Applicable inserts are common with the popular WEX type SEC-WaveMill

- The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, workpiece shape, clamping system).

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

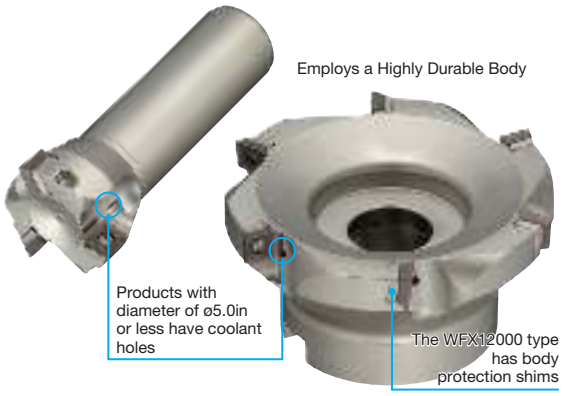
■ General Features

SEC-WaveMill WFX Type for shoulder milling is a screw-locking type cutter capable of using four corners.
Ideal cut edge design delivers good squareness.
Now with high-efficiency, multi-functional WFXH type and chamfering WFXC type.
Our wide range covers a wide variety of applications.

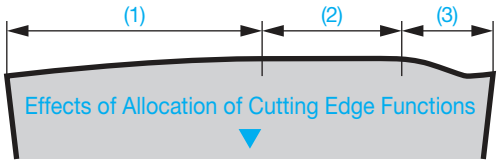
WFXH Type **WFXC** Type

■ Features

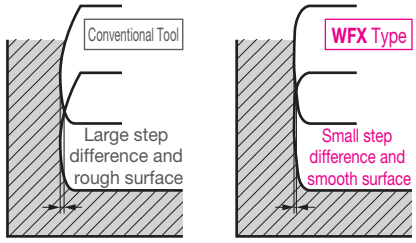
The insert shape optimized for shoulder milling and the high-precision body leave a superior machined surface finish.



● **Optimized Edge Shape (For Shoulder Milling)**



(1): The convex shape **ensures cutting edge strength**
(2): The flat shape **reduces step differences** in shoulder milling



(3): The wiper edge function improves the surface roughness

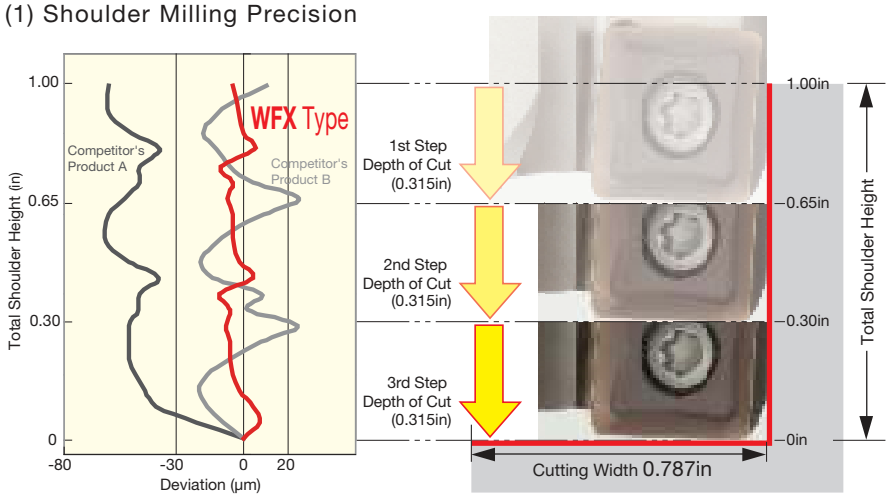
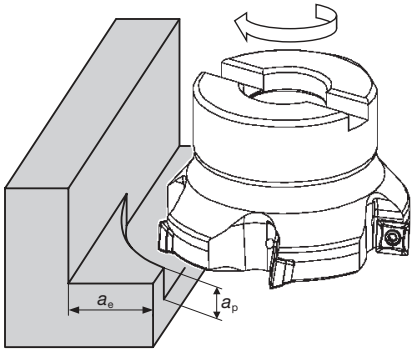
■ Cutting Performance

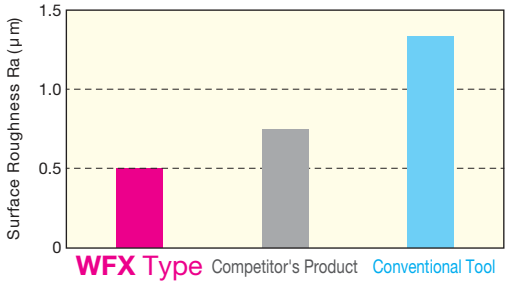
(1) Shoulder Milling Precision





Part Material: **1050 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656** SFM, f_z = **0.006 IPT**,
a_p = **0.315"** x **3** times, a_e = **0.8"**

(2) Comparison of Surface Roughness



Part Material: **4140 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656 SFM**, f_z = **0.004 IPT**,
a_p = **0.12in**, a_e = **3.54in**

(3) Comparison of Surface Properties

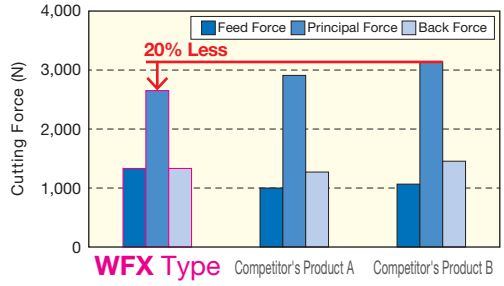
Part Material: **1050 Steel**
Cutting Conditions: a_p = **0.02"**

Glossy without Clouding | Clouded without Gloss

Part material: **304 Stainless**
Cutting Conditions: a_p = **0.02"**

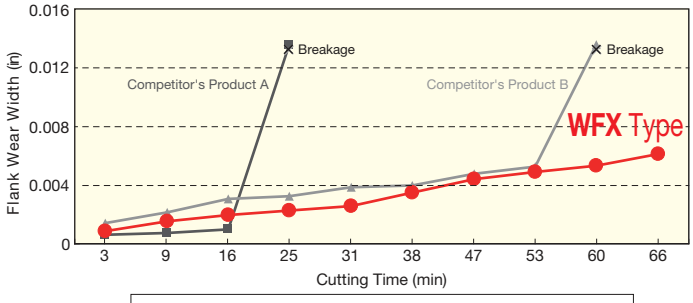
WFX Type | Competitor's Product

(4) Comparison of Cutting Force



Part Material: **1050 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656 SFM** f_z = **0.006** IPT,
a_p = **0.4**in, a_e = **0.8in**

(5) Comparison of Wear Resistance



Part Material: **4140 Steel** Tool: **WFX12100R** (ø100 x 1 flute evaluation)
Cutting Conditions: v_c = **656 SFM**, f_z = **0.006 IPT**,
a_p = **0.2**in, a_e = **1.18in**

■ Application Examples

Workpiece (1050 Steel)		Sumitomo	Conventional Tool
	Tool	**WFXF08063RS**	
	Grade	**ACP200**	
	Tool Dia. (mm)	ø63	ø63
	Number of Teeth	8	5
	v_c (SFM)	720	720
	v_f (IPT)	43	43
	f_z (IPM)	0.006	0.008
	a_p (in)	0.12	0.16
	a_e (in)	1.97	1.97
	Coolant	Wet	Wet
	Results	· Vibration reduced by approximately 30% · Good machined surface · Tool life doubled	

Workpiece (Cast Iron - FCD450)		Sumitomo	Conventional Tool
	Tool	**WFXF12100R**	
	Grade	**ACK300**	
	Tool Dia. (mm)	ø100	ø100
	Number of Teeth	7	6
	v_c (SFM)	656	656
	v_f (IPM)	17.5	17.5
	f_z (IPT)	0.004	0.004
	a_p (in)	0.002	0.002
	a_e (in)	-	-
	Coolant	Dry	Dry
	Results	· Good surface roughness Ra 0.98 → 0.38μm, Rz 7.63 → 3.34μm · Cutting time shortened Insert life is extended by approximately 20%	

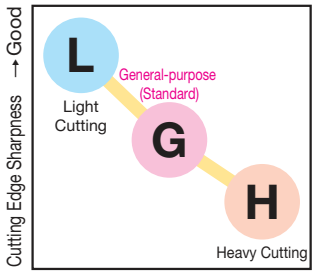
■ Grade Application Range

Work Material	Grade	Finishing to Light Cutting	Medium Cutting	Rough to Heavy Cutting
P Steel	Coated Carbide	ACP100	ACP200	ACP300
M Stainless Steel	Coated Carbide	ACM200	ACM300	

Work Material	Grade	Finishing to Light Cutting	Medium Cutting	Rough to Heavy Cutting
K Cast Iron	Coated Carbide	ACK200	ACK300	
N Non-Ferrous Metal	Coated Carbide		DL1000	
	Carbide		H1	

The letters "C" and "P" at the end of each grade indicate the coating type. C : CVD, P : PVD, Blank: Uncoated

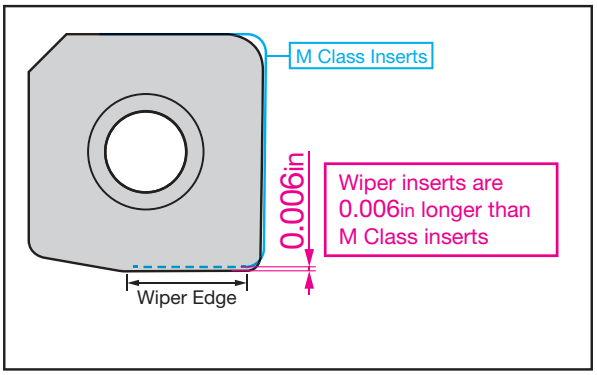
■ Chipbreaker Selection

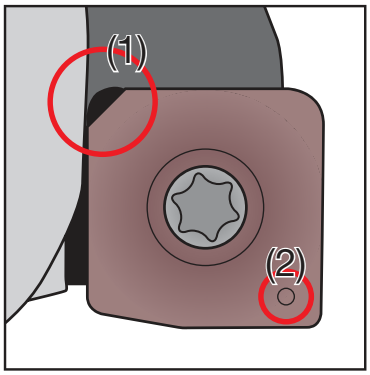


Part Material	P M K S	N
Chipbreaker	L Type	G Type	H Type	Wiper Insert	S Type
Features	Low Cutting Force	General-purpose Type	High Strength Type	Wiper Edge	Sharp Edge
Cutting Edge Cross Section	20°	15°	10°	15°	25°
Applications	Light Cutting, Low Rigidity Milling and Reduction of Burrs	Main Chipbreaker General Purpose to Interrupted Milling	Roughing, Heavy Interrupted Cutting and Hardened Steel Milling	High-precision Finish	For Non-Ferrous Metals

■ Wiper Insert

Optimized wiper edge shape provides superior surface roughness.





Precautions when Using Wiper Inserts

- The wiper insert has a single corner specification.
- Place the wiper insert so that the chamfered corner is in location (1) shown in the figure.
- Use the corner with the ID mark. (2) (08-size inserts have no marks)
- Refer to page N55 for details about wiper inserts.
