Ideal partner for the trade.

Professional power tool solutions. Each professional power tool comes with professional accessories. Metabo does not only offer a large selection of system accessories, but also a complete range of the required consumables. The right solution for every application.

Quick orientation
Thanks to the continuous color theme on information strips and on the packaging, the customer will be informed about product use and application in a targeted manner.

More space for sales
Present 40% more products on the same area by means of hanging products behind one another in tiers

Flexible setup
The accessory presentation system adapts itself to any retail space. The individual elements can be set up quickly and easily.

Mobile sales consultation
Thanks to our mobile vans we can support you in your mobile promotions and presentations

Digital marketing
Using always up-to-date product information, images and videos we are offering modern solutions for sale at the digital point of sale.

Training
Technical consultations help the customer to find the ideal solution. Our training will help you with this.

Diverse competence

Good work results can only be achieved with powerful accessories. Therefore, all Metabo products are designed for demanding applications without any compromise. They are manufactured and controlled according to the most stringent quality standards. We offer everything from a single source: System accessories and consumables for any application.

Cutting and grinding

Clean cutting edges and smooth surfaces are guaranteed with our cutting and grinding accessories.

Sawing

The ideal saw blade for each application with colour coding system for fast orientation.

SDS max/plus drill bits and chisel bits

Very demanding applications become child's play with the right accessories.

Accessory sets

Everything always at hand thanks to the multitude of our accessory sets

Chucks

Precision down to the detail for all standard drills and any work process.

Made in Germany: Innovation is our tradition.

In every Metabo tool there is traditional German engineering ingenuity. Since 1924 we have been developing innovative ideas in our Nürtingen plant and have been implementing them into pioneering tools and perfect accessories for professional users directly on site. Our service, tailor-made to your requirements, also makes us a strong partner for the industrial sector.

M+ System: Machine and accessories perfectly synchronised for maximum performance.

Even during the development phase at Metabo, machines and accessories are optimally adjusted and tested to complement one another. The added benefit: Maximum performance for screwdriving, drilling, grinding, cutting and saving thanks to Metabo + System effect.

Cutting and grinding discs: The Metabo quality classes at a glance

Metabo offers you four quality grades, from which you can choose the right disc for your applications.

**»Novoflex«
»Novorapid« Inox**

Basic quality

Impress with good cutting output and material removal with good tool life.

**»Flexiamant«
»Flexiarapid« Inox**

Standard quality

Particularly uniform in cutting output and extraordinary tool life.

**»Flexiamant Super«
»Flexiarapid Super«
Inox HydroResist**

Premium quality

Extremely high cutting output with very long tool life

»M-Calibur«

Premium CER quality

Special ceramic abrasive grain technology and bonding for highest productivity and work progress

Cutting and grinding discs: Powerful and robust

The quality of cutting and grinding discs depends on several things: The grit (size, shape and quality of the abrasive grains), determines how powerful a disc is. The right ratio of bonding, filler materials and glass reinforcement determine how long the disc will last. Metabo cutting and grinding discs are manufactured in accordance with our recipes and quality specifications so that they, in combination with our machines, achieve best working results. The powerful discs permit an optimum working result in connection with long tool life and are therefore particularly economical.

Metabo product line Flexiamant super

Safety notes

- Use ear protection
- Use goggles
- Use dust mask
- Use protective gloves
- Limitations of usage

Safety standard OSA

The Symbol of Safety

Metabo cutting and grinding accessories meet the highest safety standards, international standards and safety requirements such as EN 12413 and OSA

The Metabo colour coding system

Metabo grinding wheels are colour coded according to their application area with the appropriate colour from the coding system. The catalogue carries the relevant colour bar on the left side of the grinding disc groups' table to help selection:

	Steel, sheet steel
	Stainless steel
	Aluminium, bronze, copper, brass, other NF metals
	Stone, concrete, tiles, breeze block etc.
	Pipeline

This is how to read the specification for a cutting and grinding disc:

<p>Specification The combination of letters and numbers is the genetic code of the grinding wheel.</p> <p>Abrasive A ■ For general metal processing ZA ■ Special discs for metal processing</p> <p>C Silicon carbide ■ For processing stone</p> <p>CA Ceramic ■ Special discs for processing stainless steel and metal</p>	<p>Grit The higher the number, the finer the grit. We use grain sizes of 16 – 60 for cutting and grinding discs: 16–24 Coarse 30–60 Medium</p> <p>Hardness The hardness of a grinding tool is coded alphabetically: ABC ... NOP ... RST ... Z Very soft Soft Hard Very hard</p> <p>Shape Shape 41: straight version Shape 42/27: offset version</p>	<p>Bonding B Resin bonding ■ Permitted for a circumferential speed of up to 50 m/s BF Glass-fibre reinforced resin bonding ■ Permitted for a circumferential speed of up to 80 m/s</p> <p>Example: A 24-N-BF A Aluminium oxide 24 Grit N Hard disc BF Glass-fibre reinforced resin bonding ■ A disc of this type cuts well and has a good service life when working with steel.</p>

Cutting and grinding discs "M-Calibur" for steel and stainless steel.

"M-Calibur" grinding wheels with special ceramic abrasive grain technology and bonding for highest productivity and work progress in steel and stainless steel

- Maximum number of cuts with the cutting disc "M-Calibur" (up to 3 times the service life)
- Extremely high cutting speed
- Maximum material removal with the grinding disc "M-Calibur" (up to 3x the removal than standard grinding discs)
- Extremely high material removal speed

Highest safety standards

- Exceed the requirements of all relevant safety standards EN 12413, OSA

Perfectly adjusted to the most powerful angle grinders

Particularly wide range of application

- For all steel and stainless steel applications

New durable miracle: Flexiarapid Super/Combinator cutting discs with HydroResist formula

Resin-bonded grinding wheels age and lose performance over the course of time - even if they are unused. The newly developed HydroResist formula counteracts this process and sustainably ensures the performance of the discs.

- More endurance:** increases the service life of the disc - even with high atmospheric humidity
- Less replacement costs:** 10% more cuts (per disc) by virtue of newly developed formula for optimised connection of grain and bonding agent

The Metabo convex flap discs.

- **Extremely long tool life** with high-grade ceramic grain
 - Extremely high material removal with low effort
 - **Uniform material removal across the entire service life** with self-sharpening ceramic grain
 - **Good bonding of the ceramic grain on the carrier material**
 - **Grinding-active additional layer**
 - **Cool grinding on surfaces and edges**
 - **Fields of application:**
Processing of sheet metal, container construction, die-cast parts, pipes, bars, metal, stainless steel, high-alloy steels, titanium alloy, chrome-nickel steel, brass, bronze etc.
- Ideal also for extreme grinding jobs

- **The ideal shape for fillet welds**
Achieve the optimum finish faster
- **Extremely long tool life**
thanks to high-quality ceramic grit and/or zirconia alumina
- **Extremely high and fast material removal**
thanks to high-quality ceramic grit and/or zirconia alumina
- **Faster and more efficient work results**
thanks to the design which is ideally adapted to fillet welds, also suitable for surface grinding
- **Particularly long service life**
thanks to the use of ceramic grit and/or zirconia alumina and the high number of lamellae
- **Specially shaped flap disc**
with lamellae that are rounded off towards the outer edges,
→ suitable for all angle grinders
- **Maximum working speed 80 m/s**

In the ceramic grit, fine aluminium oxide (Al₂O₃) crystals are bonded to each other by means of a sintering process. The grinding forces cause the micro crystals to break off during the grinding process so that the grinding grit always gets new, sharp cutting edges.

	Removed material after the end of the grinding time
Aluminium oxide	890,0 g
Ceramic grain	2295,0 g

A ceramic grit fibre disc manages 2.5 times the removal of an aluminium oxide disc

Combination flap disc - KLS

- Made from high-quality pink aluminium oxide fabric in combination with high-quality nylon web.
- For removal of material to fine polish in a single process. Very even grinding/polishing result with good material removal.
- For processing weld seams for example, and for grinding or polishing. For removing minor scratches and damage to the work piece.
- Suitable for grinding, cleaning and finishing work on stainless steel, steel, coloured and light metals, titanium alloys.
- Maximum working speed: 80 m/s
- Recommended speed: 3,000 /min

Fleece compact polishing discs »Unitized« - VKS

- Made of compacted fleece material on a fibreglass plate
- For cleaning and polishing surfaces, for smoothing weld seams; reduces the number of working stages required
- For alloy and high-alloy steels, coloured and light metals, chrome and nickel steels, titanium, steels
- Max. speed: 8,000 /min; 52 m/s
- Recommended speed: 3,000 /min

Fleece compact grinding discs »Unitized« - VKS-ZK

- Several layers of pressed fleece material, soaked with resin-bonded abrasive grain (zirconia alumina)
- The addition of abrasive grain covers a range of applications from deburring to soft and flexible finishing jobs. It is suited for deburring, smoothing of weld seams, precise cleaning and finishing of surfaces.
- For alloy and high-alloy steels, coloured and light metals, chrome and nickel steels, titanium, steels
- Profiling of the grinding media possible for precise working. Very low grinding of the processed material.
- Bore 22.23 mm (for angle grinder)
- Max. 10,000/min; recommended speed: 3,000/min

"Metabo Pyramid" hook and loop sanding sheets

- 3-dimensional structure of the grinding media (pyramid-shaped).
- High material removal with, at the same time, a very even and fine grinding result. Long service life. Faster progress when compared to tradition grinding media thanks to the considerable reduction in the number of working stages.
- For removing scratches, mill scale on stainless steel. Preparation for polishing.
- Suitable for use throughout the metal industry; especially for stainless steels, titanium, cobalt, nickel, chrome alloys.

Backing pad, standard 2.0

- Medium-hard backing pad for fibre discs, ideal for grinding applications with fine and medium grit
- High flexibility thanks to smooth surface
- Safe working protected from sparks thanks to innovative design, optimally adjusted to the dimensions of the standard guards from Metabo. Also suitable for Metabo angle grinder with Auto-balancer
- Flange nut included in scope of delivery
- Maximum working speed: 80 m/s

Diamond cutting discs for building industry and trade

High-quality and robust diamond cutting discs from Metabo meet highest safety standards, international standards (EN 13236) and safety requirements according to OSA. They guaranteed highest cutting speed in connection with a long tool life. This results in a particularly economical processing of different materials e.g. concrete, exposed aggregate concrete, clinker, hard stone, granite or other building materials. The product range offers the ideal tool for any processing task.

Diamond cutting discs are available in two quality classes

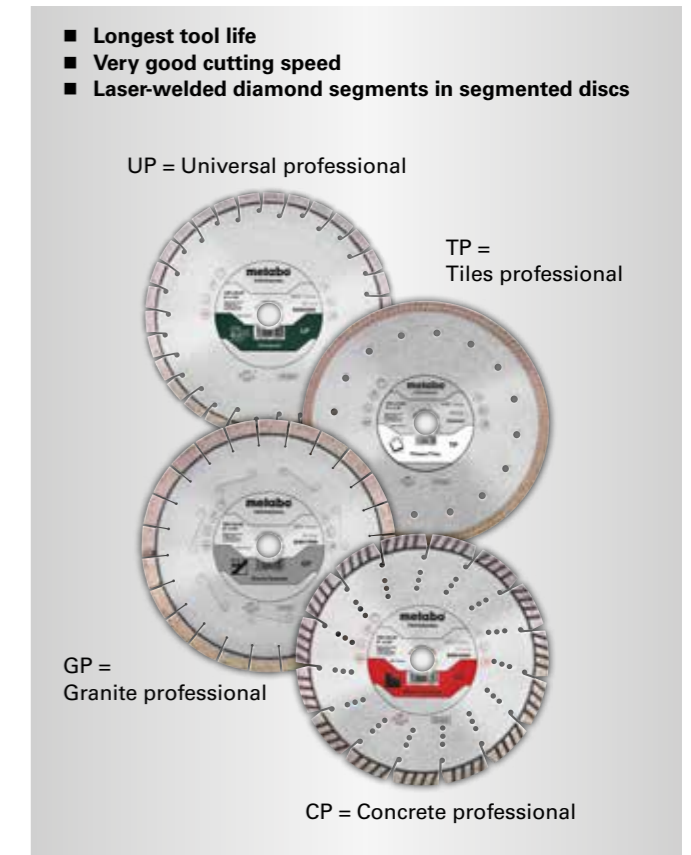

SP quality:

- Good service life
- Good cutting speed

Professional quality:

- Longest tool life
- Very good cutting speed
- Laser-welded diamond segments in segmented discs

Benefits:

- Highest degree of safety guaranteed by OSA and EN 13236
- Excellent cutting speed for short cutting times thanks to high-grade diamond quality
- Long tool life
- High cutting comfort thanks to hardened steel blade
- High efficiency

Recommended use:

- Cutting with little pressure to avoid overheating of the diamond cutting disc

Diamond and PCD cup wheels

High-grade and robust diamond and PCD cup wheels from Metabo provide maximum grinding comfort and can be used in a particularly economical manner for different applications. They combine maximum material removal with long tool life. This results in a particularly effective processing of different materials, such as concrete, screed, lime/cement plaster, tile adhesive, protective coatings.

Diamond and PCD cup wheels are available in two quality classes:

Classic:

- Good service life
- Good material removal

Professional:

- Longest tool life
- Very good material removal

Recommended use:

- The Metabo renovation grinders in connection with a suitable vacuum cleaner permit particularly low-dust working
- We recommend the use of appropriate extraction shrouds when working with angle grinders

For abrasive materials, quality class abrasive "professional"

Diamond core bits for tiles "Dry"

These high-grade diamond core bits (M14) for dry use with angle grinders are characterised by a long service life and fast drilling progress thanks to vacuum hard-soldered diamonds. In connection with an adapter from M14 to hexagon (order no. 630859000), the diamond core bits can also be used with drills and impact drills. They permit efficient processing of different materials, such as fine earthenware, tiles and granite.

Benefits:

- Long service life and fast drilling progress
- Easy removal of the drill core thanks to lateral recesses
- No extra cooling required. For Ø 6-14 mm an additional paraffin emulsion is integrated for improved cooling.
- The diamond core bits "Dry" are available individually and in practical sets

Recommended use:

- Recommended useful length = material thickness of the tile, fine earthenware etc. in general max. 2 cm
- Recommended useful length for granite and worktops up to 5 cm
- Repeated pulling out of the core bit from the bore for cooling
- Maximum working speed 80 m/s

Diamond tools "Dry"

Diamond drill bits for tiles "Dry", M14

- M14 Thread for use on angle grinders
- Long service life and fast drilling progress thanks to vacuum hard soldered diamonds
- Easy removal of the drill core thanks to lateral recesses
- No extra cooling required. For Ø 6-14 mm an additional paraffin emulsion is integrated for improved cooling. We recommend to briefly cool the tip with water in case of drilling in quick succession!
- We recommend using the thickness of the tile / fine earthenware / granite board as useful length. As a rule, max. 2 cm granite boards / work boards up to 5 cm can be drilled. Retract the drill bit often from the drilled hole so that it can cool down!
- Important: Do not drill into the subsurface in case of laid material!
- Maximum working speed: 80 m/s

Order no.

628321000

Diamond drill bit set for tiles "Dry" , 3 pieces
Set consisting of: 1 each Ø 35 mm, 50 mm, 68 mm;

628322000

NEW

Diamond drill bit set for tiles "Dry" 4 pieces
Set consisting of: 1 each Ø 35 mm, 40 mm, 50 mm, 68 mm

628319000

Diamond drill bit set for tiles "Dry" 7 pieces
Set consisting of: each 1 x Ø 6 mm, 8 mm, 14 mm, 35 mm, 40 mm, 50 mm, 68 mm;

628317000

NEW

Diamond drill bit set for tiles "Dry" 6 pieces
Set consists of: 1 each Ø 35 mm, 40 mm, 50 mm, 68 mm + diamond core bit 20 mm + diamond cup wheel 50 mm

628320000

Adapter for diamond core bits "Dry"

Adapter hexagon 10 mm / M 14
■ For the use of diamond core bits "Dry" for drills and impact drills
Receptacle: hexagonal 10mm, M 14 male thread

Order no.

Cutting systems: For low-dust working.

The cutting systems using angle grinders bring high performance with low-dust processing of concrete, screed or tiles. With optimally harmonised systems of machines, extraction shrouds, special discs and matching vacuum cleaner you can work with high productivity, whilst your working environment remains almost free of dust and your health is protected.

Accessories for Inox angle grinders

Fleece compact polishing discs »Unitized« - VKS

- Made of compacted fleece material on a fibreglass plate-
- For cleaning and polishing surfaces, for smoothing weld seams; reduces the number of working stages required
- For alloy and high-alloy steels, coloured and light metals, chrome and nickel steels, titanium, steels
- Max. torque: 8,000 /min; 52 m/s, recommended speed: 3,000 min

Diameter x thickness x bore mm	Grit	Sales unit / packing unit	Order no.

Fleece compact grinding discs »Unitized« - VKS-ZK

- Several layers of pressed fleece material, soaked with resin-bonded abrasive grain (zirconia alumina)
- The addition of abrasive grain covers a range of applications from deburring to soft and flexible finishing jobs. It is suited for deburring, smoothing of weld seams, precise cleaning and finishing of surfaces.
- For alloy and high-alloy steels, coloured and light metals, chrome and nickel steels, titanium, steels
- Profiling of the grinding media possible for precise working. Very low roughing of the processed material.
- Bore 22.23 mm (for angle grinder)
- Max. 10,000 rpm; recommended speed: 3,000 rpm

Diameter x thickness x bore mm	Grit	Sales unit / packing unit	Order no.

Combination flap disc - KLS

- Made from high-quality pink aluminium oxide fabric in combination with high-quality nylon web.
- For removal of material to fine polish in a single process. Very even grinding/polishing result with good material removal.
- For processing weld seams for example, and for grinding or polishing. For removing minor scratches and damage to the work piece.
- Suitable for grinding, cleaning and finishing work on stainless steel, steel, coloured and light metals, titanium alloys.
- Maximum working speed: 80 m/s
- Recommended speed: 3,000 /min

Diameter x bore mm	Grit	Sales unit / packing unit	Order no.

Flap discs

- Quality class zirconia alumina »Flexiamant Convex«**
- Specially shaped flap disc with lamellae that are rounded off towards the outer edges.
 - Grinding media: Zirconia alumina
 - Thanks to the special design it is particularly suited for processing fillet welds; making faster and more efficient processing possible; also suitable for surface grinding
 - High material removal with very high tool life thanks to the use of zirconia alumina
 - Suitable for processing steel and stainless steel
 - Uniform grinding result, comfortable grinding with only low vibration
 - Maximum working speed 80 m/s

- Quality class ceramic »Flexiamant Super Convex«**
- Specially shaped flap disc with lamellae that are rounded off towards the outer edges.
 - Thanks to the special design it is particularly suited for processing fillet welds; making faster and more efficient processing possible; also suitable for surface grinding
 - Very high material removal with very high tool life thanks to the use of ceramic grain.
 - Cool cut for materials with poor thermal conduction
 - For grinding of steel and stainless steel. Ideal for extreme grinding jobs like processing high-alloy steels, titanium alloys, nickel-based alloys as well as chromium and chromium-nickel steels, brass and bronze thanks to high load capacity.
 - Uniform grinding result, comfortable grinding with only low vibration
 - Maximum working speed 80 m/s

»Metabo Pyramid« hook and loop sanding sheets

- 3-dimensional structure of the grinding media (pyramid-shaped).
- High material removal with, at the same time, a very even and fine grinding result. Long service life. Faster progress when compared to traditional grinding media thanks to the considerable reduction in the number of working stages.
- For removing scratches, rolling marks on stainless steel. Prepare for polishing.
- Suitable for use throughout the metal industry; especially for stainless steels, titanium, cobalt, nickel, chrome alloys.

- For cleaning and evenly distributing protective media and polishes, for removing pastes and cream residue
 - Suitable for all metals and hard plastics

- Stainless steel cleaning spray 400 ml**
- For cleaning, conserving and sealing of surfaces, especially on stainless steels.

- Vienna lime chalk**
- For cleaning, caring and polishing of smooth surfaces, especially stainless steel, silver, brass, glass, ceramic etc.
 - Contents: 300 g, shaker

Ready for any application: System solutions for die grinders.

Whether you remove fine burrs or want to grind surfaces in hard to reach places, we have the right die grinder for you. The machines impress with their slim design and details, like for example, the spindle lock for easy and fast tool change. An extensive range of accessories, compliment the different die grinders, permitting precise and safe working in the different application areas.

Carbide router bits

- Carbide head made from high-quality carbide with a percentage of Cobalt
- Specially hardened steel shaft
- Special copper soldering material for a safe connection
- 100% control of the soldering joint

Design wave shape

Wave shape geometry

Centred teeth

Carbide router bits with round spur cutting edges are produced with a wave geometry; this results in improved ease of cutting at the end of the tool.

Shapes and applications at a glance

Recommended cutting speeds for different material groups:

Material groups	Serration	Cutting speed
Steel and die-cast materials	Cross-cut serration MX	Construction steels Carbon steels Tool steels Non-alloy steels Case-hardening steels Cast steel 450 - 600 m/min
		Hardened, heat-treated steels over 1,200 N/mm (>35 HRC) Tool steels Heat-treated steels Alloy steels Cast steel 250 - 350 m/min
Stainless steels	Cross-cut serration MX	Steels resistant to rust and acid Austenitic and ferrous stainless steels 250 - 350 m/min
NF Metals	Aluminium serration ALU	Soft NF metals Aluminium Brass Copper Zinc 600 - 900 m/min
		High temperature-resistant materials Nickel-base alloys Ni-Co alloys 300 - 450 m/min
Cast iron materials	Cross-cut serration MX	Grey cast iron Ductile cast iron 450 - 600 m/min

Example: Material group: Stainless steel
Serration: cross / MX Cutting speed: 250 - 350 m/min
Cutter head Ø 8 mm **Recommended speed range: 10,000 - 14,000 /min**

Recommended speed range:

Router bits

Carbide router bits

- Carbide burrs with cross-cut serration for general applications. The cross-cut serration permits comfortable working and better control. Thanks to the improved ease of cutting, the material removal is increased. Suitable for almost all metals, such as hardened and unhardened steel, stainless steel, titanium, brass, copper, cast iron, bronze.
- Application examples: Deburring, machining of contours, processing of surfaces, milling of hard to reach places, machining of narrow angles

Radius rotary burr Unparalleled conical rotary burr with special curved structure. The specially developed guide system prevents the cutter sliding off the work piece. Therefore it is ideally suited for fine radii at sharp corners/edges and good control over sharp edges. The special groove geometry (overlapping standard serration in the bit centre) permits fine milling on all surfaces and quick material removal with long service life. The smooth face side helps guiding the cutter and protects the surface from damage. Specially developed for achieving radius chamfers in hard materials such as steel, stainless steel, cast iron, titanium, bronze, copper, brass, etc.

Diamond cutting discs

Our complete range of diamond cutting discs can be found in chapter 03 of this catalogue. We offer diamond cutting discs in all relevant diameters in different quality classes for all applications such as cutting of concrete, granite, tiles and other building materials.

Diamond cutting disc »professional« / UP-T

- Fast and comfortable cutting of wall slots in different materials possible
- Highly reduced workload thanks to the intelligent system of interlacing arrangement of segments, since chiseling away of the centre is not required. Great time saving thanks to cutting in one step
- Reduction of dirt and dust, since the material is removed cleanly and completely from the slot
- Customised slots for individual lines, or for Ø 20 and 25 mm-empty pipes. Max. cutting width: 20 mm (2 rows 628298000) / 30 mm (3 rows 628299000)

SDS-max/SDS-plus: Quality classes

Metabo offers you three quality classes for drill bits and chisels: From simple applications, where a solid, robust quality drill bit is required, and applications with high demands, to extreme applications with highest demands for the tool used. This means: We have the right drill bit or chisel for you for any application.

»Classic«

Solid, robust and reliable. These characteristics perfectly describe »Classic« tools. »Classic« hammer drill bits have a carbide tip and a good tool life. The chisels of this class are characterised by high material quality and good material removal. They always provide good service for all standard applications.

»Professional« / »Pro 4«

»Professional«, is, when it comes to drillers, in short "Pro4". Drill bits and chisels in this class are of particularly high quality and have a long service life. Special hardened steel and special surface handling guarantee long tool life and fast progress when drilling and chiselling. For users with high demands, who want more than the usual.

»Professional Premium« / »Pro 4 Premium«

This is the pinnacle of accessories. It offers the maximum of features a tool can offer. These products have innovative features that achieve excellent work results even for demanding applications. »Professional Premium« chisels are self-sharpening for maximum breaking performance and longest tool life. »Pro 4 Premium« drill bits with 4 cutting edges in 4x90° geometry do not stop even when hitting reinforced concrete. For users with high demands for tools and machines.

SDS-plus Hammer drill bits

SDS-plus »Pro 4«: progress extremely fast

The special cutting edge geometry on the chisel-shaped bit head made of high quality carbide ensures quick penetration even into the toughest concrete and granite.

- **Highest drill speed** thanks to reduction in friction and improved impact transmission
- **2-spiral helix with its large geometry with reinforced core (KVS).** The narrower cutting width geometry at the front edge and the reinforced relief and core at the rear additionally reduce friction whilst ensuring high resistance to breakage at the same time

- The **special cutting edge geometry** on the chisel-shaped drill head ensures deep penetration in hardest concrete and granite
- **Stable and durable centering point** for high-precision spot-drilling, no running across smooth surfaces

- **Power breakers** cause micro tears in the material for a noticeable quicker drill progress

SDS-plus »Pro 4 Premium«: break-proof and durable

The combination of an intelligent, innovative geometry with uncompromising quality right down to the last detail can be seen by the high level of durability, precise drilled holes and the extraordinarily quiet operation even under the toughest of conditions.

- **Innovative, unique, full carbide cutting edge geometry in optimum 4x90° symmetry** prevents catching when you come across reinforcements and ensures round holes
- **Power breakers** cause micro tears in the material for a noticeable quicker drill progress

- **up to Ø 12 mm: full carbide head** for even higher drill speed and longer service life

- **Ø 13-16 mm: single-piece carbide element** centering point for simple, accurate drilling

- **Ø from 18 mm: three-piece carbide element** centering point and wear marking on both sides of the main plate for simple, precise piloting and the evaluation of measured dowel holes

- **Low-vibration drilling with 4-spiral helix.** 2 large volume helixes remove the bore dust quickly and reliably from the drill hole, two reinforced spirals ensure additional safety and stability.

Carbide-tipped hammer drill bits, SDS plus »Classic«, 2 cutting edges

- SDS-plus drill bit with high-quality carbide drill tip
- Dynamic, chisel-shaped bit head
- Large-volume S-spiral geometry ensures quick drill dust removal
- Good drilling output with good tool life
- For use in concrete, masonry, natural stone

Carbide-tipped hammer drill bit, SDS-plus »Pro 4 Premium«, 4 cutting edges

- Intelligent geometry with its uncompromised quality of detail ensures a long service life, precise drill holes and maximum quiet running - even on the toughest loads.
- Highest level of safety thanks to the optimum symmetrical head geometry with 4 full carbide cutters, which do not catch when encountering reinforcing.
- Up to Ø 12 mm: with innovative, welded full carbide head for maximum tool life and larger dust outputs for highest drill speed
- Power breakers cause micro tears in the material for a noticeable quicker drill progress
- Low-vibration drilling with 4-spiral helix. 2 large volume helixes remove the bore dust quickly and reliably from the drill hole, two reinforced spirals ensure additional safety and stability.
- Extremely resistant to breakage thanks to high-grade special steel
- Very long tool life for up to 50% more dowel-compatible circular bores
- For professional use in masonry, concrete and armoured concrete

SDS-max »Pro 4« hammer drill bit

SDS-max »Pro 4«: Extremely fast in concrete

The extremely robust and aggressive full-carbide S-blade and suitable side cutters permit very fast drilling.

- Short head with **large-volume dust channels** for smooth transport of the drill dust, minimum generation of heat for constantly **long service life**

- Inclined auxiliary cutting edges for aggressive drilling progress with **highest drilling speed**

- Drill-active centering point** for precise spot-drilling and optimum guidance when drilling in concrete and reinforced concrete

- Innovative wear indication** as indicator for dimensional conformance and precise drilling hole diameter

- Vibration Control** – ideal for the hardest applications on the construction site

SDS-max »Pro 4« Premium: Highest drilling speed, longest service life

The extraordinarily strong and durable connection between steel body and the full-carbide drill head with 4 cutting edges guarantees extraordinarily high performance and tool life when drilling into reinforced concrete.

- Blade geometry - 90° centering point for precise spot drilling and little breakage at the edge of the drilled hole

- Fast dust removal, best possible drilling progress thanks to optimal removal of the drill meal via four real helixes

- Marking/wear indication:** The visibility of the marking line indicates the precision of the drill diameter

Carbide-tipped hammer drill bit, SDS-max »Classic«, 4 cutting edges

NEW

- SDS-max drill bit with high-quality carbide drill tip
- 4 blades, vacuum-soldered and hardened for long service life
- Good drilling output with good tool life
- Large-volume S-spiral geometry ensures quick drill dust removal
- For use in concrete, masonry, natural stone

Carbide-tipped hammer drill bit, SDS-max »Pro 4«, 2 cutting edges

- The slim, chisel-shaped bit head enables fast penetration into the selected material.
- Short spiral inlets and large boring dust grooves in the optimised double delivery helix ensure quick boring dust discharge.
- The continuous core reinforcement ensures stability and durability. It enables maximum energy transmission from rotary hammer to drill tip.
- For use in concrete, masonry, natural stone

- Unrivalled destructive force: Extremely robust and aggressive solid carbide S-blade
- Constant high lifetime: Short head with large-volume dust channels for smooth transport of the drill dust, minimum generation of heat
- Highest drilling speed: Inclined auxiliary cutting edges for aggressive drill progress
- Optimum centring: Drill-active centering point for optimum guidance when drilling in concrete and armoured concrete
- Precise drilling hole diameters: innovative wear indication (indicator for dimensional conformance)
- Vibration Control: optimised vibration values - ideal for the hardest applications on the construction site

Carbide hammer drill bit, SDS-plus »Pro 4 Premium«, 4 cutting edges

NEW

- Extremely robust and aggressive full carbide bit head, 4 cutting edges for extraordinary service life and tool life in strong concrete
- The wear marking on both sides of the main plate serves as indicator to evaluate the dimensional conformance of the dowel holes.
- The 4-spiral helical geometry ensures low-vibration drilling behaviour and low spiral wear
- 90° centering point for precise spot drilling and little breakage at the edge of the drilled hole
- Ideal for use in reinforced concrete and hard natural stone

SDS-plus / SDS-max dust extraction drill bits

- **Drilling and cleaning in one work step** reduces the dust exposure and reworking
- **Greatest reinforcement compatibility**, no sagging or clogging thanks to 4-blade-geometry with extra large dust outlets
- **Noticeably fast drilling progress** thanks to optimal drill dust removal
- **Innovative head design** with greatest concentricity for precise dowel holes

- **Active drill bit cooling** for long service life
- **Dust-free drilling** for compliance with legal provisions on user safety. Up to 98% less dust in the bore
- **Universal vacuum cleaner adapter** fits all standard industrial M-class and H-class vacuum cleaners

Kindly observe the installation instructions of the manufacturer when using the chemical installations

Chisel SDS-plus / SDS-max

Chisels »professional«

Longest service life and versatility

- Use of high-grade heat-treated steel
- Special processing and hardening procedure, also suitable for re-sharpening
- Extensive range with chisels for many special applications such as channel chisels or stake drivers

Chisels »professional premium«

Maximum service life and material removal

- Self-sharpening cutting edges for highest breaking performance
- Maximum removal thanks to efficient impact transmission and additional cutting edges
- The innovative head shape reliably prevents wedging
- Special hardened steel and special surface handling ensure longest tool life and productive operation.

Chucks: Precise fit and long service life.

Simple handling, secure fit and long service life are the quality factors of a quality chuck. The Metabo Futuro Top chucks have a spring-loaded bit clamping mechanism for precise fit, and the hardened and ground components (clamping jaws, guide sleeve and the chuck body) of the chuck ensure a long service life and precise working.

Metabo Futuro Top keyless chuck

Spring-loaded safety feature

To ensure secure grip of the drill bit, even in the most demanding continuous mode of 62,000 strokes/min.

Dual dust protection

Any dust that gets between the jaw guide and the rubber bellow is ejected through the openings in the chuck sleeve.

A hard-wearing, oil-resistant rubber bellows system protects the thread and the precision press fit from contamination.

Precise fitting parts and a long service life

All of the heavily used parts of the chuck are hardened. The clamping jaws, the guide sleeves and the chuck body have a ground finish.

Easy to use

The chuck can be opened easily and conveniently even after it has been used for tough drilling or impact drilling jobs.

Warranty for optimal quality

More than 30 inspection points monitor the manufacture of the individual parts.

After assembly, each chuck is checked thoroughly for concentric operation and functional safety.

The Metabo Quick System: Versatile and comfortable.

Quick and efficient working

Quick change of bit retainer and accessory for flexible working

Increase in efficiency with competence accessories

Thanks to the magnetised female hexagon socket, hex bits or screwdriver bits can be inserted directly into the machine spindle. This assists drilling and screwdriving use in confined spaces and direct torque transmission.

Numerous Metabo cordless drill/screwdriver and impact hammers of the L, LT and LTX class, as well as the cordless tappers and the mains-powered drill BE 75 Quick are equipped with the Quick System. All these types contain the addition »Quick« and the designation of the class (L, LT or LTX).

Metal drill bit

HSS-R Metal drill bits, DIN 338, roll-milled

Spiral drill bit made of high-grade high-speed steel according to DIN 338, roll-milled, cylindrical, right-hand cutting, type N, black surface

Application:
Suitable for drilling in the common metals such as steel, non-ferrous metals, alloyed and non-alloyed cast steel. Up to 900 N/mm² tensile strength.

HSS-G metal drill bits, DIN 338, ground

Precision spiral drill bit made of high-grade high-speed steel according to DIN 338, precision ground, cylindrical, right-hand cutting, type N, crosswise grinding 135° according to DIN 1412 C (from 3 mm), polished surface

Application:
For maximum load and precision in crafts and industry. For drilling in steel and cast steel, alloyed and unalloyed, grey cast iron, sintered iron, nickel silver, graphite etc. Up to 900 N/mm² tensile strength.

HSS-Co metal drill bits, DIN 338, ground

Precision spiral drill bit made of cobalt-alloyed high-grade high-speed steel according to DIN 338, precision-ground, cylindrical, type N, reinforced core thickness, with crosswise grinding 135° (from 2 mm) according to DIN 1412 C, bronze surface

Application:
For maximum load and precision in crafts and industry. For drilling hard-to-machine materials such as heat, corrosion and acid resistant steels, VA steel, special alloys, welded seams, CrNi-steels. Up to 1100 N/mm² tensile strength.

HSS-TiN metal drill bits, DIN 338, ground

Precision spiral drill made of titanium coated high-grade high-speed steel according to DIN 338, precision ground, cylindrical, right-hand cutting, type N, crosswise ground 135° (from 3 mm upwards) to DIN 1412 C, gold colour surface finish.

Application:
For maximum load and precision in crafts and industry. For drilling steel and cast-steel, alloyed and non-alloyed, grey cast iron, annealed cast-iron, nickel silver, graphite, bronze and brass. Up to 900 N/mm² tensile strength. HSS-TiN drill bits are not suited for processing aluminium.

Metal drill bit

HSS-R metal drill bits, DIN 338, roll-milled

- Spiral drill bit made of high-grade high-speed steel according to DIN 338, roll-milled, cylindrical, right-hand cutting, type N
- Cone-shaped shell polished surface 118°, diameter tolerance h8
- Black surface
- Suitable for drilling in steel, non-ferrous metals, alloyed and non-alloyed cast steel. Up to 900 N/mm² tensile strength.

Masonry drill bits, universal drill bits

Masonry drill bit, carbide-tipped

Very robust, high-grade masonry drill bits for rotary and impact drills, carbide insert 130°, milled angle groove, straight spiral intake, heat resistant, good durability and long service life.

Application:
For drilling in masonry, natural stone

Concrete drill bits, carbide-tipped, »classic« series

Concrete drill bit for rotary and impact drills, milled angle groove, straight spiral intake, long tool life, heat-resistant, carbide insert 130°, negative chamfer, robust version, surface shot peened

Application:
For drilling in concrete, masonry, natural stone

Concrete drill bits, carbide-tipped, »pro«

High-grade, robust concrete drill bit, carbide plate 130°, especially heat-resistant, very long tool life, with special groove for quick discharge of borehole cuttings, surface blank

Application:
For drilling in granite, concrete, masonry, natural and artificial stone. Suitable for light rotary hammers with a three-jaw chuck

Universal drill bits, carbide-tipped

Multi-purpose drill bit with cylindrical shaft for rotary, non-impact use, diamond ground carbide inserts and a positive aggressive cutting angle, ideally suited for use with cordless tools.

Application:
For drilling in wood, metal, plastic, brick, gypsum boards, aerated concrete, tiles, ceramic, etc.

Masonry drill bits, concrete drill bits

Masonry drill bits, carbide-tipped

Diamond tools »Dry«

Diamond drill bits for tiles »Dry«, M14

- M14 Thread for use on angle grinders
- Long service life and fast drilling progress thanks to vacuum hard soldered diamonds
- Easy removal of the drill core thanks to lateral recesses
- No extra cooling required. . For Ø 6-14 mm an additional paraffin emulsion is integrated for improved cooling. We commend to briefly cool the tip with water in case of drilling in quick succession!
- We recommend using the thickness of the tile / fine earthenware / granite board as useful length. As a rule, max. 2 cm granite boards / work boards up to 5 cm can be drilled. Retract the drill bit often from the drilled hole so that it can cool down!
- Important: Do not drill into the subsurface in case of laid material!
- Maximum working speed: 80 m/s

Wood drill bit

Wood drill bits CV

Wood spiral drill bit made of high-grade steel, similar to DIN 7487 hardened, with centering point

Application:
For drilling in hard and soft wood, plywood, chipboards, etc.

Auger bits

Auger bit for timber with self centering thread point and pre-cutting action, with hexagonal shaft, especially fast drilling cycle, very good material removal.

Application:
Ideal for drilling deep holes in thick hard and soft wood, especially timber beams.

Forstner drill bit

Similar to DIN 7483, with centering point, 2 main cutters and 2 ring cutters

Application:
For use in hard and soft wood, veneered wooden boards. Suitable for drilling blind holes.

Flat wood drill bit

Wood drill bit made of high-quality steel with centering point for precise drilling and 2-sided cutting for splinter-free drilling. The 1/4" (6.35 mm) hexagonal shaft fits into traditional chucks and E 6.3 holders.

Application:
For fast drilling soft wood, boards, chipboards, plywood, etc.

*Self-service packaging

Wood drill bit

Wood drill bits CV, with centring point

- For use in hard and soft wood, plywood, chipboards, etc.
- Wood spiral drill bit made of high-grade steel, hardened, with centering point
- Similar to DIN 7487

Hole saws

»Pionier« Multipurpose hole saw, carbide tipped, with M 16 female thread

- Carbide teeth supported on both sides and enlarged brazed contact areas guarantee a secure fit and a high-strength connection of material.
- Improved vibration characteristics by means of the special curved geometry of the enlarged chip room and the clean-out slot.
- Ideal for electricians, tile layers, sanitation installers, heater contractors, cabinet makers, kitchen studios, artisans
- For solid wood, plywood, chipboard, plastics, acrylic glass, tiles (up to scratch hardness 6), plaster concrete blocks, aerated concrete, wood-wool boards, fibre cement, solid brick
- Maximum cutting depth 60 mm
- Only use in rotary mode, turn off impact. Use hole saws only with arbor and pilot drill.

Arbors for multi-purpose hole saws »Pionier«

- Comfortable quick fastener for a fast change of the centre drill, without setscrew.
- No tool loss in the event of accidentally switched-on impact mechanism: the shortened holding slots prevent impact operation on the hammer drills with SDS-plus holder, thereby not damaging the tool.
- For working with the multi-purpose hole saws »Pionier«
- Easy removal of the drilling core by unlocking the pilot drill and pulling out the drilling core from the hole saw.
- The spanner flats enable easy release of the adapter.

Bi-metal hole saws

- Hole saws made of bi-metal with hardened teeth made from high-alloy high-speed steel with a cobalt content of 8%, thus significantly increased tool life
- Quicker and softer chip removal through new kind of teeth with irregular tooth shape and division; thus less vibration
- For use in cast steel and grey cast iron, stainless steel, constructional steel, aluminium, bronze, copper, PVC, acrylic glass, wood.
- Maximum cutting depth approx. 35 mm
- Thread for hole saws-Ø 14-30 mm: 1/2"-20 UNF; thread for hole saws-Ø 32-152mm: 5/8"-18 UNF
- Use hole saws only with the corresponding arbor and pilot drill.

Screwdriver bits with 1/4" (6.35 mm) hexagonal shank

Screwdriver bits, torsion

- Screwdriving bits made from molybdenum vanadium steel (S2 quality) for high durability and forced closure with the screws
- The torsion zone permits to equalise torque peaks, since it absorbs forces and vibrations during the screwdriving process. High force load possible; prevents from premature breakage.
- 1/4" hex drive

Suitable for any application

- Extensive new range of circular saw blades for all applications
- Uniform differentiation thanks to colour coding system
- In "professional" and "classic" qualities

"professional"

- Maximum cutting quality
- Particularly long service life
- Low noise and reduced vibrations

"classic"

- Solid blade
- Good cutting results

cordless cut wood

- Maximum runtime for cordless saws thanks to extra-thin cutting width and steel blade thickness
- Increased number of cuts per battery pack charge
- In "professional" and "classic" qualities

power cut wood

- For quick, coarse and medium-fine cuts
- In "professional" and "classic" qualities

precision cut wood

- For very good, clean cutting results for longitudinal or cross-cuts
- In "professional" and "classic" qualities

multi cut

- Universal use for demanding materials
- Perfect cutting results
- In "professional" and "classic" qualities

steel cut

- Universal use for cold cuts in metals
- Particularly suited for use in sheet steel, steel profiles and sandwich materials
- "Classic" quality

aluminium cut

- Perfect cuts in aluminium thanks to special tooth geometry
- "Professional" quality

fibercement cut

- Especially for use in cement and gypsum-bound fibre and chipboards
- Very long service life and high cutting quality thanks to PCD teeth
- "Professional" quality

laminat cut

- Perfect cuts in laminate thanks to special tooth geometry
- Reduction of vibration and noise thanks to laser ornaments
- "Professional" quality

Technical characteristics of the circular saw blades

The rake angle
The rake angle influences the cut quality, feed and cutting forces. It always correlates to the desired entry and exit angles to the workpiece.

The size of the front rake angle depends on:

- The material to be processed (front rake angle decreasing: soft wood - hard wood - chip materials - non-ferrous metals)
- The respective cutting quality required on one or both edges

Positive and negative rake angle
Positive rake angle:

- Easy cutting action - fast cutting
- Cutting power in the direction of the workbench (hand-held circular saw)
- Workpiece edge: clean on the underside, without splinter guard poor on the upside

Negative rake angle:

- More difficult cutting process - higher cutting power required from machine
- Cutting force in the direction of the workpiece support (mitre saws)
- Workpiece edge on the upper side better than on the underside

The clearance angle
If the clearance angle is too low, chip removal by the next tooth is not possible. A large clearance angle facilitates large chip removal. This is necessary for greater feeds.

Entry and exit angles on the workpiece
In most cases, the exit angle is unfavourable as opposed to the entry angle. For this reason the "good side" should be positioned upside down.

Saw blade projection
With increasing saw blade projection, the quality on the exit side decreases. It does not however improve on the entry side due to the lack of guidance effect. The ideal saw blade projection is between 8 and 10 mm.

Steel blade thickness

- Thinner blades are suited for thinner materials and require less power. Ideal for cordless applications.
- Thicker blades are particularly stable and are therefore suited for precise cuts in thicker materials on powerful saws.

Tooth shapes on the circular saw blades

WZ alternately bevel-ground tooth

- Exceptionally clean cuts in all softwoods and hardwoods, wood-fibre, laminate and plastic materials
- Easy to sharpen.
- With negative rake angle: Use on mitre saws

FZ flat tooth

- Ideal for fast and coarse lengthwise cuts in solid wood
- Simple to maintain

FZ/TZ flat/trapezoid tooth

- Ideal for aluminium, copper and brass facing, plastic, coated chipboard and MDF boards and other wooden materials
- Very clean cuts
- With negative rake angle: Use on mitre saws

FZ/FA flat tooth/chamfered flat tooth

- Used primarily for construction site and table saws, but also for high-output hand-held circular saws
- Perfectly suited for construction wood, plywood boards (also with nails and concrete residue), chipboards
- Extremely robust teeth

DZ/HZ roof/hollow tooth

- Ideal for boards coated on both sides
- Very precise and splinter-free cuts

PCD

- Diamond mounted for very long tool life
- PCD teeth exclusively in "fibercement cut" circular saw blades

SP/NV pointed tooth, KV wolf tooth

- Used for construction site saws and log cutting saws or high-performance table saws
- Tooth shape only with circular saw blades made from chrome-vanadium steel

"Cordless cut wood" circular saw blades

"Cordless cut wood" circular saw blades, professional quality, for circular saws

NEW

- Maximum runtime for cordless saws thanks to extra thin steel blade thickness and cutting width
- Significantly more cuts per battery pack charge compared to standard saw blades with the same long tool life
- Particularly long tool life thanks to best carbide quality and finely-ground teeth
- Precise, low-noise and vibration-minimised cuts thanks to lasered expansion slots (and partially laser ornaments) as well as lasered steel blades made from sintered steel

"Precision cut wood" circular saw blades

"Precision cut wood" circular saw blades, professional quality, for circular saws

- Very wide range of uses in wood processing
- For very good, clean cutting results for longitudinal or cross-cuts in softwood and hardwood
- Perfectly suited for hard wood and plywood, untreated chipboards, coated or veneered, MDF, composite materials
- High power consumption so the saw must have a high performance motor
- Particularly long tool life thanks to best carbide quality and finely-ground teeth
- Precise, low-noise and vibration-minimised cuts thanks to lasered expansion slots (and partially laser ornaments) as well as lasered steel blades made from sintered steel

"Precision cut wood" circular saw blades, professional quality, for semi-stationary circular saws

- Very wide range of uses in wood processing
- For very good, clean cutting results for longitudinal or cross-cuts in softwood and hardwood
- Perfectly suited for hard wood and plywood, untreated chipboards, coated or veneered, MDF, composite materials
- High power consumption so the saw must have a high performance motor
- Particularly long tool life thanks to best carbide quality and finely-ground teeth
- Precise, low-noise and vibration-minimised cuts thanks to lasered expansion slots (and partially laser ornaments) as well as lasered steel blades made from sintered steel
- Secondary holder for circular saw blades with Ø 216, 250, 254 and over 300 mm

"Laminate cut" circular saw blades

"Laminate cut" circular saw blades, professional quality, for semi-stationary circular saws

NEW

- Precise, clean cuts in all types of laminate flooring thanks to specially developed tooth geometry
- Particularly long tool life thanks to best carbide quality and finely-ground teeth
- Precise, low-noise and vibration-minimised cuts thanks to lasered expansion slots (and partially laser ornaments) as well as lasered steel blades made from sintered steel
- Secondary holder for circular saw blades with Ø 216, 254

Cross cutting rails and guide rails

Cross cutting rails KFS

- Mobile, compact solution for angle-precise cross cuts directly at the application site, ideal on the roof or on mounted workpieces
- Can be coupled with the Metabo circular saws KS 18 LTX 66 BL, KS 18 LTX 57, KS 66 FS, KS 85 FS
- Angle cuts up to 60° click positions at standard angles
- The integrated return mechanism brings the saw back into the starting position after the cut
- Easy coupling with the circular saw thanks to quick closure
- Splinter protection reduces breakout when sawing
- Adhesive coating for safe, non-slip surface contact as well as protection of the workpiece surface

Steel blade material/saw blade teeth

- HCS** Carbon steel, for cutting soft wood, hardboards, plastics
- HSS** High yielding high-speed steel, suitable for metal, aluminium work
- BiM** Bi-metal is an especially flexible mix of HCS and HSS. The saw blades have a much higher service life than HCS and HSS and have proven their worth when there is risk of the shaft breaking
- HM/CT** Carbide: innovative carbide technology for excellent service life
Carbide strip or mounting for very long service life

- Teeth milled, offset for clearance gap**
A relatively rough cut, fast progress in cutting on hard and soft wood, aluminium, non-ferrous metals and plastics
- Teeth milled, waved for clearance gap**
A fine cut with straight tool guidance in hard and soft wood, aluminium, non-ferrous metals and plastics
- Teeth ground, offset for clearance gap**
Fast cutting in hard and soft wood
- Teeth ground, offset for clearance angle and clearance gap**
Fine and clean cut in wood and plastics

Features of the Metabo sabre saw blades

Colour coding system

The colour indicates for which material the saw blade is best suited.

metal	Metal
wood + metal	Wood with nails/metal elements
wood	Wood
carbide	"Carbide": innovative carbide technology for excellent service life for demanding demolishing work in wood with nails/metal elements and straight cuts into metal e.g. high-strength steel, cast steel/grey cast
expert	Special applications in the field of building trade and renovation
expert carbide	Special applications in the field of building trade and renovation Very long service life thanks to carbide strip, welded-on carbide teeth or carbide mounting

Steel blade material/saw blade teeth

HCS	Carbon steel, for cutting soft wood, hardboards, plastics
HSS	High yielding high-speed steel, suitable for metal, aluminium work
BiM	Bi-metal: particularly flexible mix of HCS and HSS. The saw blades have a much higher life expectancy than HCS and HSS and have proven their worth when there is risk of the shaft breaking
HM/CT	Carbide: innovative carbide technology for excellent service life Carbide strip or carbide mounting for a very long service life
RD	Diamond coating for a very long service life for special applications, e.g. cuts in cast pipes (also with cement lining), glassfibre-reinforced plastics, Epoxy and very abrasive materials

Teeth milled, offset for clearance gap
A relatively rough cut, fast progress in cutting on hard and soft wood, aluminium, non-ferrous metals and plastics

Teeth milled, waved for clearance gap
A fine cut with straight tool guidance in hard and soft wood, aluminium, non-ferrous metals and plastics

Teeth ground, offset for clearance gap
Fast cutting in hard and soft wood

Teeth ground, offset for clearance angle and clearance gap
Fine and clean cut in wood and plastics

Shaft form

The sabre saw blades from Metabo are produced with a universal shank shape matching the sabre saws of standard brand names.

"Flexible fast metal" sabre saw blades

- Curved blade shape perfectly supports the orbital movement of the sabre saw and ensures best possible power transmission
- 30% higher cutting speed compared to straight saw blades
- More cuts - less frequent blade change: up to 25% longer service life of the saw blade

Designation of the band saw blades

Example:

Top edge induction hardened.
2240 x 6 x 0,5/A - 4 (14 TPI)

Top edge induction hardened. = tooth tip induction hardened
Carbon steel with induction hardened tooth tips;
very economical thanks to high useful life

2240 = band length mm
6 = band width mm
0,5 = band thickness mm
A - 4 = clearance of tooth tips mm
14 TPI = A2 = number of teeth per inch unit
1,3 TPI = A18 = number of teeth per inch unit

Stands for mitre saws: ideal for the construction site and the workshop.

All Metabo mitre saws, as well as all standard models of renowned manufacturers, can be mounted on the light and robust KSU 401, and KSU 251 stands, quickly and without tools. Thanks to the trolley function, which Metabo designed for construction sites and staircases, the large handles and the ability to fold the legs with one only hand, has optimised the stands for transport. Even with the saw mounted, the stands can be folded with just a few hand movements and can be comfortably pulled to and from the workplace. They are extremely robust and stable and are suitable both for use on construction sites as well as in the workshop.

Robust and light design
with max. weight load in central part of 250 kg

Extendable workpiece supports
up to 400 cm with rollers and folding guide for precise cutting in series

Quickly ready to use
thanks to lockable folding legs and adjustment option for safe positioning

Universal machine carrier - makes it suitable for all the conventional mitre saws of well-known manufacturers

Trolley function
for mobile use during installation, and on the construction site even with mounted saw

KSU 401

KSU 251:
Compact design for easy transport

Trolley function
for comfortable transport even with the saw mounted

Folding function by actuating lever
for quick, single-handed folding and unfolding

Abrasive media: high removal and durable

Proven quality for professional use: for processing surfaces like wood, metal, paint, stone.
 Also suitable for sanders of all common makes.

Structure and purpose

The sanding compound
 carries the abrasive grain and transmits the cutting forces. In addition to high strength and low elongation, the abrasive backing must have a flexibility adapted to the respective grinding process.

- Carriers are
- Highly compressed papers of various thicknesses.
 - Fabric based on polyester and cotton of various strengths.
 - Vulcanized fibre as a strong and tear-proof base is the base material for the (Vulcan) fibre disc.

The abrasive grain
 is the actual cutting tool. It penetrates the material being processed and removes the surface. The abrasive grain is anchored on to the grain-holding medium. High hardness, toughness and a sharp edged geometry are the most important attributes of the abrasive grain.

- Abrasive grain types are
- Corundum (aluminium oxide) as a hard, slightly brittle grain for the processing of metal, wood, varnish, etc.
 - Silicon carbide as a hard, sharp-edged abrasive grain for the processing of lacquer, wood, ceramic, glass and rubber etc.
 - Zirconia Alumina as a tough and fine crystalline combination of aluminium oxide and aluminium zircon for the processing of metal and non-rusting materials.

The bonding agent
 anchors the abrasive grain in the sanding compound carrier and supports it against the forces generated by the removal of the surface.

- Bonding agents are
- Phenolic resins and partially synthetic resins for sufficient support

The quality of Metabo sanding media

- e.g. for random orbital sanders:
Wood + metal »professional«
E-paper, pink aluminium oxide, resin bonded
 ■ High-quality sanding paper with high coarseness and high removal of material
 ■ For best results when sanding wood and metal for professional use

Application:
 For veneers, solid wood, polyester, steel and stainless steel sheets, non-ferrous metals, light alloys

- For example, for orbital sanders:
Wood »classic«
A/B paper, aluminium oxide, resin/glue bond
 ■ High-quality sanding paper with semi-open coarseness

Application:
 For wood generally, solid wood, veneers, plastic, acrylic glass, lacquer, spatula, fillers, e.g. for deburring, cleaning of plywood, veneer, solid wood, lacquered surfaces, deburring of veneered furniture edges

- For example, for triangular base-plate sanders:
Paint »professional«
B/C paper, pink grade corundum, stearate-coated, resin bonded
 ■ High-quality sanding paper with semi-open coarseness and high removal of material
 ■ The special stearate coating ensures a long service life by not clogging the sanding medium

Application:
 For best results when sanding off paint, lacquer, body-filler on wood or metal on professional application

Filter bag

PE disposal bag

- 20 times the volume of paper filter bags
- No clogging with fine dust (especially quartz dust)
- Well suited for applications where large amounts of fine dust are generated (e.g. removal of plaster from surfaces, grinding and removal of screed etc.)
- Meet the requirements for M and H class vacuums
- Ideal when using machines for processing concrete and masonry, such as: renovation milling machines, renovation grinder, long-neck sanders, wall chasers etc.
- Clean, simple and fast removal and disposal

One battery, many solutions.

Cordless Alliance System (CAS) is an alliance of leading power tool brands. This permits now a number of professional applications also with cordless tools - from standard to special tasks.

Combine machines, battery packs and chargers of different brands with each other without any problems - CAS makes it possible.

www.cordless-alliance-system.com

100% compatibility with all CAS brands in the 18 V class!

LiHD. Cut the cord - keep the power.

The powerful cells of the Metabo LiHD battery packs supply enough power to tackle even the most demanding applications without cable. Thanks to the LiHD technology, Metabo is the only manufacturer worldwide to cover the performance spectrum up to 3,200 watt.

Maximum power that is available for an extremely long time, for any application.

ONE charger - ONE system.

Charging made extremely easy: one charger for all Metabo slide-on battery packs from 12 to 36 volt.

Accessory modules: Well thought out in detail.

The high quality of the Metabo accessory program, plus an optimal presentation warrant a successful and lucrative accessory business.

- Attractive sales modules for high-turnover product areas, e.g. drills, hole saws, jigsaw blades
- Lockable sales cabinets for drills
- Clear product information with colour system on the head bands
- Behind the hinged head band, clear article designation with EAN Code, Order No., dimensions and price range. Thus quick identification of product and reordering without problem.
- Flexible hook system and safe fit of the products
- Presentation option on any wall, in the Metabo accessory presentation system or counter display
- Always within the visual focus of the customer
- Self service vendor system
