Quality Floor Mats to Protect  
Entrances this Winter Season

## Proper floor matting helps reduce cleaning costs, injuries, and repairs.

Cold weather brings rain, snow, ice, and debris. Tracked in water and snow can turn an entranceway into a slip-and-fall accident waiting to happen, while water and salt can damage floors. NoTrax<sup>®</sup> entrance mats keep dirt and debris out of a facility, make entrances look clean and tidy, and reduce slip hazards and floor damage.

NoTrax entrance mats combine quality and functionality:

- Heavy duty carpet for increased crush resistance and water absorption in high traffic areas
- Functional hi-low designs scrape shoes and channel moisture and debris away from the surface of the mat
- A variety of scrape and dry options available in longer lengths to provide optimum cleaning and drying with every step
- Reduce tracked in dirt and moisture and the costs associated with cleaning dirty floors

## Create an Effective Entrance Matting System – Follow the 15-ft Rule

Up to 80% of moisture, dirt and debris enter a facility from foot traffic, and most accumulates within 10-20 ft of an entrance. Using 15 ft of matting ensures each foot will contact the mat at least 3 times, providing adequate scraping and drying to stop most dirt and moisture at the entrance.

The 15 ft of matting can consist of a single mat, or for a true high-performance entrance matting system, several mats with unique functionality to address the three major zones of an entrance.

### Zone 1: Initial Scraping

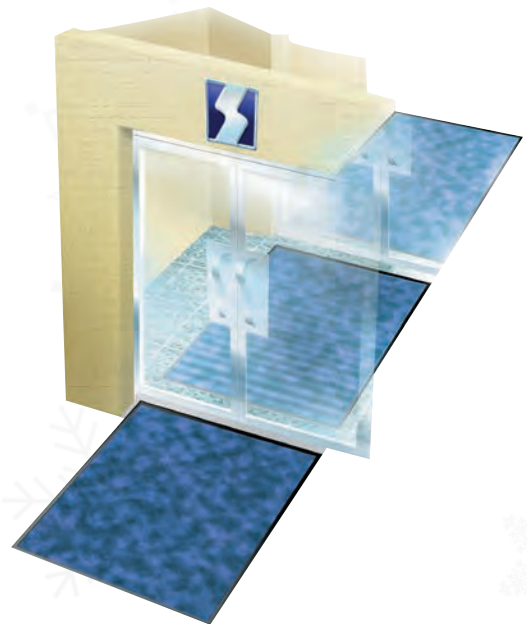

Usually positioned outside of the entrance, this first zone removes up to 40% of dirt and moisture from shoes.

### Zone 2: Scraping & Absorption

Positioned just inside, these dual process mats have scraping carpet fibers to target finer particles and debris while also absorbing moisture.

### Zone 3: Drying

The final zone uses mats with softer, more absorbent fibers to ensure all moisture and debris has been removed.
