Information to Select the Correct Insert

ISCAR has an extensive variety of Groove-Turn products. In many cases, you can perform your operation by using several different products. In order to make the optimal selection, these basic parameters need to be defined:

- Insert width [CW]
- Necessary tolerance on the insert
- Maximum depth of grooving [CDX]
- Application requirement grooving and turning, or only grooving (E-Type or not)

According to these parameters:

- Select the most suitable product according to the tables on pages 243-244
- Select the most suitable chipformer according to the information on pages 245-247

Utility Inserts

Pressed to Size Inserts

Width	± 0.05
Repeatability	± 0.10

If you don't need the tight tolerance, save money and select a utility insert (less expensive).

Precision Grooving Inserts

Peripheral Ground Inserts

Width	± 0.02
Repeatability	± 0.025

What is an E-type Groove-Turn Insert?

E-type inserts are precision ground grooving inserts with **turning** capability.

These inserts include the letter **E** in their description. (example: **GIP 3.00E-0.4**). This is to distinguish them from precision ground inserts which are not suitable for turning operations and don't include an **E** in their description. (example: **GIP 3.00-0.2**)

- E-type inserts usually have a larger corner radius
- E-type inserts have a larger honing size

Precision Grooving Insert

E-Type Groove-Turn

Chipbreaker Selection

T-Type

- Optimal performance in wide range of materials and cutting conditions
- High efficiency in full grooving, partial grooving and turning applications
- Utility inserts only
- Width range
External: 2.39 - 6.35 mm

General Use

P-Type

- Very “open” geometry
- Medium to high feed in turning and grooving
- Large variety of standard sizes
- Precision ground inserts only
- Width range
External: 2.39 - 6.35 mm
Internal: 2.39 - 6.35 mm

F-Type

- First choice in grooving
- Low to medium feeds in grooving and turning
- Both precision ground and utility inserts
- Width range
External: 3.0 - 10 mm
Internal: 3 - 6 mm

G-Type

- Efficient chipbreaker for narrow width grooves
- Width range: 1 - 2.3 mm
- No option for turning

Y-Type

- General use in grooving and turning
- Positive top rake reduces cutting forces
- Excellent for long shafts
- Eliminates vibrations
- Both precision ground and utility inserts
- Width range
External: 8 - 20 mm

HG-Y-Type

- General use in grooving and turning
- Efficient for a wide range of materials and cutting conditions
- Utility inserts only
- Width range
External: 3 - 6.35 mm
Internal: 3 - 6.35 mm

Chipbreaker Selection

Problematic and Specific Materials

N-Type

- First choice in grooving of problematic, soft & gummy materials
- Very low to medium feeds (from 0.05 mm/rev)
- Both precision ground and utility inserts
- Option for turning
- Width range
External: 3 - 8 mm
Internal: 2 - 5 mm

M-Type

- Unique chipbreaker with splitter
Chips are split into 3 segments
- Efficient for problematic, soft & gummy materials
- Option for light turning
- Width - 8 mm

A-Type

- First choice for machining cast Iron
- Peripheral 15° T-land on a flat top
- Exerts high cutting forces, therefore suitable for stable conditions
- Precision ground inserts only
- Width range
External: 3 - 8 mm

PA-Type

- First choice for machining aluminum
- High positive rake
- Peripheral ground and polished top rake with a very sharp edge
- Suitable also for finish operations on titanium and heat resistant alloys
- Width range
External: 3 - 8 mm

CW-Type

- Unique chipformer for heavy-duty grooving
- Very wide chipbreaking range on carbon and alloy steel
- Width range 14, 17 and 20 mm

Chipbreaker Selection

Profiling (Full radius)

Y-Type

- First choice in profiling
- Positive top rake reduces cutting forces
- Excellent for long shafts
- Eliminates vibrations
- Both precision ground and utility inserts
- Width range
External: 3 - 12 mm
Internal: 2 - 3 mm

YF-Type

- First choice for profiling ductile materials
- Utility inserts only
- Width range
External: 3 - 8 mm

PA-Type

- First choice for profiling aluminum
- High positive rake
- Peripheral ground and polished top rake with a very sharp edge
- Suitable also for finish operations on titanium and heat resistant alloys
- Width range
External: 3 - 8 mm

YZ-Type

- First choice for profiling ductile aluminum
- Peripheral ground and polished top rake with a very sharp edge
- Width range
External: 3 - 8 mm

H-Type

- Unique chipbreaker for heavy-duty profiling
- Negative T-land for extra edge toughness
- Suitable for heavy interrupted cuts and cast iron machining
- Width - 12 mm

• DG..1.0 insert can be mounted into pocket sizes 2 and 3, in which case the pocket width has to be modified • For user guide, see pages 380-395

⁽¹⁾ For CUTDIA 50 mm, use single-ended insert (should be modified by the user)

⁽²⁾ Blades with frontal coolant holes (JET-CUT) • For CUTDIA 50 mm, use single-ended insert (should be modified by the user)

⁽³⁾ These blades are suitable for turning, using GRIP 4 inserts • Blades with frontal coolant holes (JET-CUT)

⁽⁴⁾ Minimum cutting width

⁽⁵⁾ Maximum cutting width

⁽⁶⁾ For DG. 1... insert, modify holder

⁽⁷⁾ Thickness at the D.O.C. area is 1.0 mm

⁽⁸⁾ Maximum diameter with double-sided inserts.

For inserts, see pages: DGN-LF/LFT (441) • DGN-MF (442) • DGN/DGNC/DGNM-C (438) • DGR/L-C DGRC/LC-C (439) • DGN/DGNM-J/JS/JT (440) • DGR/L-J/JS (441) • DGN-P (444) • DGN-UT/UA (443) • DGN-W (439) • DGN-WP (444) • DGN-Z (442) • DGR-P (444) • DGR-WP (445) • DGR-Z/ZS (443) • GRIP (254) • GRIP (full radius) (255)

The Twisted Insert
for Face Machining

The double-ended, twisted insert body makes it possible to machine deeper than the inserts' length. A unique chipformer for controlled chip flow in axial and radial directions. The rear angle is slanted in relation to the frontal edge so it does not come into contact with the machined groove surface as the tool penetrates deeply into the workpiece.

• For machining depth over 13 mm, a single-ended insert is required (GIM, GIMF,GIMY,GIMT,GIMN) • CDX for grooving depth depends on part diameter CUTDIA • For grooving a part with a diameter larger than CUTDIA, see next table • For using TIP inserts, tool holder seat needs to be modified according to insert profile to ensure clearance

• For user guide, see pages 380-395

⁽¹⁾ In the case of inserts with CW<2 mm, tool pocket should be ground to 0.3 mm thinner than the insert's grooving width.

⁽²⁾ For Star and multi-spindle machines.

⁽³⁾ Minimum cutting width

⁽⁴⁾ Maximum cutting width

⁽⁵⁾ Maximum parting diameter

CUTGRIP

GHIC-70

Boring Bars for Internal Grooving and Turning Blades, DMIN=70 mm

Designation	H	DCONMS	OAL	HF	OAW		
GHIC 40-70	26.0	40.00	260.00	18.0	53.0	SR M6X16 DIN912	HW 5.0
GHIC 50-70	26.0	50.00	300.00	23.0	53.0	SR M6X16 DIN912	HW 5.0

• For both right and left hand applications 380-395

For tools, see pages: CGHN 26-M (340) • TGHN 26-M (338)

CUTGRIP

GHIC-85

Boring Bars for Internal Grooving and Turning
Blades, DMIN=85 mm

Designation	H	DCONMS	OAL	HF		
GHIC 40-85	32.0	40.00	260.00	18.0	SR M6X16 DIN912	HW 5.0
GHIC 50-85	32.0	50.00	300.00	23.0	SR M6X16 DIN912	HW 5.0

• For both right and left hand applications 380-395
For tools, see pages: CGHN 32-DGM (342) • CGHN 32-M (341)

CUTGRIP

CGHN 26-M

Internal Grooving and Turning
Blades for GHIC...-70 Bars

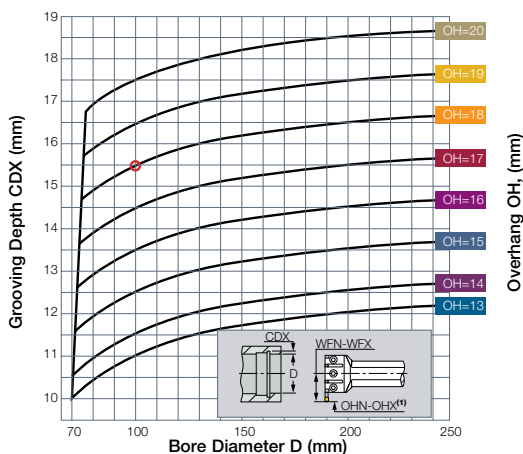

Designation	CWN ⁽¹⁾	CWX ⁽²⁾	WB	DMIN	WFN ⁽³⁾	OHN ⁽⁴⁾	WFX ⁽⁵⁾	OHX ⁽⁶⁾	HF	OAL	H
CGHN 26-3M	2.80	4.00	2.40	70.00	40.0	13.5	46.5	20.0	21.4	63.00	26.0
CGHN 26-4M	3.60	4.50	3.20	70.00	40.0	13.5	46.5	20.0	21.4	63.00	26.0
CGHN 26-5M	4.40	6.40	4.00	70.00	40.0	13.5	46.5	20.0	21.4	63.00	26.0

• Grooving depth (CDX) varies in conformance with blade's overhang (WFN-WFX and OHN-OHX) and depends on the bore diameter (D) • CGHN 26...-M can be modified from external double-sided CGHN blades • When TIP inserts are used the seat needs to be modified to ensure clearance • For user guide, see pages 380-395

- (1) Minimum cutting width
- (2) Maximum cutting width
- (3) Adjustable extension
- (4) Minimum overhang for adjustable extension
- (5) Adjustable extension
- (6) Maximum overhang for adjustable extension

For inserts, see pages: GIMF (271) • GIMY (272) • GIMN (272) • GIMY (full radius) (273) • GIMY-F (274) • GIF-E (W=4-6) (275) • GIF-E (W=4-6 full radius) (277) • GIP-E (276) • GIP-E (full radius) (278) • GIP (280) • GIP (full radius) (280) • GIF (281) • GIF (full radius) (282) • GIA-K (W=3-6) (282) • GITM (283) • GITM (full radius) (283) • GIPY (284) • GIPA (full radius W=3-6) (285) • GIPA (W=3-6) (284) • GIM-C (473) • GIM-J (473) • GIM-J-RA/LA (474) • GIM-UT (475) • GIM-UT-RA/LA (475) • GIM-W (474) • GIM-W-RA/LA (475) • GIMT (271) • GIPM-A46 / GIP-1250 (358) • TIP-MT (290) • TIP-WT (290)
For holders, see pages: GHIC-70 (339)

Internal Grooving Capacity for CGHN 26 Blades

Example:

For grooving depth CDX=15.5 mm and grooving width=5 mm in bore øD=100, use blade CGHN 26-5M and adjust overhang to OH=18 mm.

CGHN 26-...M

CGHN 32-M

Internal Grooving and Turning
Blades for GHIC...-85 Bars

Designation	CWN ⁽¹⁾	CWX ⁽²⁾	WB	WFN ⁽³⁾	WFX ⁽⁴⁾	OHN ⁽⁵⁾	OHX ⁽⁶⁾	HF	OAL	H	DMIN
CGHN 32-3M	2.80	4.00	2.40	44.0	48.0	15.0	19.0	24.8	82.00	32.0	85.00

Rake Angle (GAN°) Selection Guide

	Brass	Ledloy	Steel	St. Steel	Titanium	Aluminum
0°						
8°						
15°						

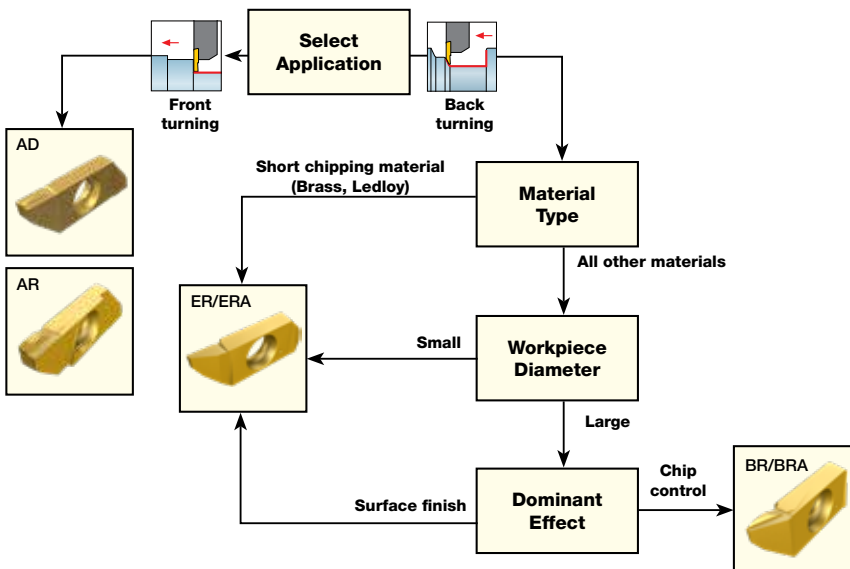

For brittle workpieces and small diameters always prefer GAN=0°

Frontal Width Selection Guide

- Small diameters and brittle workpiece: small CW (less radial force)
- Large diameters: larger CW (stronger cutting edge)

S.T. SUMO TEC ■ PVD COATED ■ CVD COATED

Recommended Applications

TiN PVD coated grade on tough substrate.
The grade is recommended for steels and stainless steels at low to medium cutting speeds.

TiCN + TiN PVD coated grade on very tough substrate for grooving and turning applications at low to medium cutting speeds on steels and stainless steel. The grade can function also at unstable conditions.

A very hard submicron substrate with **AlTiN + TiAlN PVD** coating and a special **SUMO TEC** surface treatment. Suitable for semi finishing and finishing operations of high temperature alloys at medium to high cutting speeds.

A hard submicron substrate with **AlTiN + TiAlN PVD** coating and a special **SUMO TEC** surface treatment. First choice for grooving and turning of high temperature alloys. Suitable also for titanium alloys, at medium to relatively high cutting speeds.

A hard submicron substrate with **TiAlN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Suitable for turning and grooving of high temperature alloys, austenitic stainless steel and hard steels at low to medium cutting speeds.

A tough submicron substrate with **TiAlN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Recommended for grooving and turning on large variety of materials as well as high temperature alloys, stainless steel and hard steels at low to medium cutting speeds.

TiAlN + TiN PVD coated grade with a special **SUMO TEC** surface treatment on very tough substrate for grooving and turning of steel and stainless steel at low to medium speeds and medium to high feeds. The grade is recommended for interrupted cut and machining at unstable conditions.

A very hard submicron substrate with **TiAlN PVD** coating. Suitable for grooving and turning of steel, alloy steels, austenitic stainless steel, high temperature alloys and hard steels at medium cutting speeds.

A tough submicron substrate with **TiAlN PVD** coating. Recommended for general use in grooving and turning operations on large variety of materials as well as steel, alloy steels, stainless steel high temperature alloys at low to medium cutting speeds.

A hard submicron substrate with **TiAlN + TiN PVD** coating, suitable for grooving and turning of high temperature alloys, austenitic stainless steel and hard steels at low to medium speeds.

A tough submicron substrate with **TiAlN + TiN PVD** coating. Recommended for general use in grooving and turning operations on large variety of materials as well as high temperature alloys, stainless steel and hard steels at low to medium cutting speeds.

A **TiC + Al₂O₃** multilayer **CVD** coated grade. Used for turning and grooving of grey and nodular cast iron at medium to high cutting speeds. Can be used for interrupted cut and heavy machining.

A **TiC + Al₂O₃** multilayer **CVD** coated grade. Used for turning and grooving of grey and nodular cast iron at medium to high cutting speeds.

A **TiCN + Al₂O₃** multilayer, **CVD** coated grade with a special **SUMO TEC** surface treatment. Used for machining of grey and nodular cast iron at medium to high cutting speeds.

A tough substrate with a cobalt enriched layer combined with **MTCVD TiCN** and a thick alpha **Al₂O₃ CVD** coating with a special **SUMO TEC** surface treatment. Recommended for general use machining of steels and martensitic stainless steel in a wide range of conditions, features high toughness and wear resistance.

Recommended Applications

A hard cermet grade, used for grooving and turning applications. Recommended for steels at high cutting speeds and low feeds, provides excellent surface finish. Features improved wear resistance and prevents build-up edge.

A very hard uncoated submicron carbide grade. Used for machining titanium and high temperature alloys at medium to relatively high cutting speeds. Suitable also for aluminium and other nonferrous materials.

A hard uncoated submicron carbide grade. Used for machining titanium, high temperature alloys and aluminum alloys at medium to high cutting speeds.

A tough uncoated submicron carbide grade, used for steels, stainless steel and high temperature alloys at low cutting speeds.

An uncoated carbide grade. Used for turning and grooving of aluminum and other nonferrous materials at medium to high cutting speeds. Suitable also for high temperature and titanium alloys machining at low cutting speeds.

Extra fine grain **PCBN**, used for finish turning and grooving of hardened steels **45-65 HRc**.

A combination of coarse and fine grain **PCBN**, used for finish turning and grooving, continuous and interrupted cutting of hardened steels **45-65 HRc**.

A 50% **PCBN** grade, used for finish turning and grooving of hardened steel **45-65 HRc** and nodular cast iron in continuous cutting.

A **PCD** brazed tip, suitable for machining aluminum and other nonferrous materials at very high cutting speeds.

What is a GRIP Insert?

A grip insert is a grooving, groove-turn or parting insert that is clamped between 2 prisms.

Clamping a grip insert correctly in the holder is necessary for stable machining.

- 1 Ensure that the seat is clean of dirt and swarf.
- 2 In the first stage of clamping, ease the insert gently into place. Make sure that the prismatic surfaces match.
- 3 Always use the wrench supplied with the tool. Use reasonable force to the point of resistance for final clamping. The maximum recommended clamping torque is 1.5xd Nm or 15xd Kgf x cm. d=clamping screw dia. in mm.

It is very important not to overtighten a grip insert, even though you may get the impression that the insert is more secure. When overtightened, the insert doesn't clamp into its correct and carefully designed clamping points, and therefore, is less stable.

Positioning the Tool on the Turret

Successful machining can be achieved only if the tool is properly positioned on the turret.

The following sequence should be followed:

- Position the grip holder perpendicular to the workpiece; deviation may be 0.10/100 mm along the holder
- Check to ensure that the frontal cutting edge is aligned parallel to the workpiece

If the cutting edge is not parallel to the workpiece or is positioned as shown, the deflection during machining (in the indicated direction) will be too small and chatter may occur.

Principles of Turning with Groove-Turn Tools

The basic principle in turning with groove-turn tools is the deflection of the cutting tool, which results in a frontal clearance angle α° between the insert and the workpiece. The clearance angle α° is a function of the side cutting forces and is not constant, as is the case with ISO inserts. The deflection is influenced by the following factors:

- Feed **f**
- Depth of Cut **ap**
- Overhang of Insert Support **T**
- Width of Insert Support **A**
- Cutting Speed **Vc**
- Workpiece Material

When all of the above factors remain constant during turning, a high degree of accuracy with a tolerance up to ± 0.01 mm can be achieved.

If the conditions are too light (such as in a super finish operation), there may not be enough deflection and the clearance angle will be very small. This may result in chatter and vibration.

Cutting Conditions

Choosing the correct cutting conditions

Specific cutting conditions are listed in the catalog for every individual insert as shown below:

Example: GIMF 608 Utility Inserts for Grooving and Turning

Designation	Dimensions			Tough ↔ Hard								Recommended Machining Data			
	W±0.05	R±0.05	M	IC830	IC8250	IC808	IC908	IC20	IC428	IC5010	IC907	IC806	a _p (mm)	f _{turn} (mm/rev)	f _{groove} (mm/rev)

	IC830	IC830	IC830			IC08	

■ First choice

Machining Tips

Insert Width

Generally, the insert width should be as wide as possible as it contributes to its strength. However, there are additional considerations that should be taken into account in order to choose the correct width:

- Workpiece size and clamping stability:
A larger width means higher cutting forces during grooving. A width that is too large can cause deformation of the workpiece and/or vibration.
- When using a larger width, make sure your machine has enough power. (see page 393)
- Machining strategy:
Grooving in a correct sequence should also affect your choice. (see page 389)
- Required overhang:
A larger tool overhang will require a wider insert to maintain stability.
- The larger the insert, the wider the upper and lower jaws can be, therefore, higher forces are required to effect the necessary side deflection.
- If the depth of cut is small, the width of the insert should be proportionately smaller to guarantee the required deflection.

Efficient use of insert's corners:

Always try to evenly split machining between the two corners. This optimization will increase the insert's life.

Insert Radius

Choosing the insert radius for a particular application is a combination of many factors. The corner radius of the groove-turn insert influences the product shape and tool life.

- A larger radius in turning operations normally improves surface quality.
- An insert with a larger radius has a better distribution of the cutting load and of the generated heat. It is stronger and ensures longer tool life.
- Small radii on grip inserts result in increased side forces and side deflection, preventing instability, especially with small depths of cut and feed.
- The best radius to use is basically determined by the geometry and dimensions of the workpiece. The more securely the workpiece is fastened in the machine tool, the larger the radius may be.

- When the ratio of a workpiece's length compared to its diameter is large, inserts with smaller radii will prevent chatter.
- A larger corner radius enables machining at a larger feed rate.
- In profiling operations, inserts with larger corner radii or full radii are required.

Machining Tips

Correct grooving sequence

When making a groove where the insert's width is not identical to the groove, it is recommended to select an insert that will enable grooving symmetrically in such

a way that the material is always in the center of the insert. This practice will ensure better chipbreaking and symmetrical cutting forces.

Eliminating a "Hanging Ring"

When turning at the end of a bar or towards a recess between two walls, a "hanging ring" may be formed. To eliminate the unwanted "hanging ring":

1. Turn toward the recess. Stop a short distance before reaching the recess.
2. Pull back the groove-turn tool and re-position it.
3. Machine as shown. This final operation achieves the size and flatness of the side wall.

Internal Machining

Improving Internal Turning in a Blind Hole

Internal turning in a blind hole brings about the problem of chip exit. When the tool reaches the rear side wall, chips may be caught between the wall and the insert, possibly causing insert breakage. Two solutions that can eliminate this problem:

First Solution

1. Start by grooving at the rear wall.
2. Continue by turning from the inside toward the outside.

Second Solution

1. Start by grooving at the rear wall.
2. Pull the tool back the outside.
3. Turn the final diameter from outside, toward the groove.

Optimizing Internal Machining Toolholder Overhang

It is always recommended to use the minimum possible overhang in order to maintain maximum toolholder rigidity. As a general rule, maximum overhang should not exceed three times the holder-bar diameter.

Finishing Operation: Diameter Compensation

A compensation factor for the final diameter must be used in the final machining operation. After the initial grooving to the required final diameter, the machining direction is normally changed for longitudinal turning. At this point the deflection occurs. If machining continues without correction, corner A will penetrate the material. This will result in two different diameters: øD1 from the grooving and øD2 from the turning. The difference between øD1 and øD2 is a value we define as Δ. The compensation factor is Δ/2, as shown below.

$$\frac{\Delta}{2} = \frac{\phi D^1 - \phi D^2}{2}$$

- Using the compensation factor will eliminate the small surface step. Follow this simple procedure during machining:
1. Groove to the final diameter
 2. Pull the tool back, a distance equal to the value of Δ/2
 3. Continue the finish turning operation

Characteristic values of Δ are shown in the diagrams on the next page.

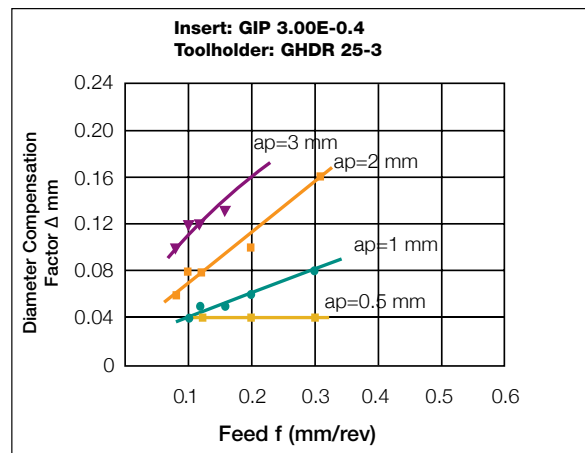

Characteristic Values of Δ

The diagrams show experimental results for specific machining conditions. These are sample values that will vary with different workpiece materials and different holder types.

Measure the Δ value for your finishing operation in a short test using your selected finishing conditions. Do not run your test using the final diameter.

Multifunction Operations

The groove-turn tools are multifunction tools, able to operate in a sequence of grooving and turning modes. Moving from turning to grooving requires consideration of the basic Grip principle, thereby eliminating the possibility of insert breakage. In this situation one must release the side deflection which is necessary in turning, but not recommended in grooving.

The following machining sequence is suggested: After completing the longitudinal turning, but before starting the grooving, the side deflection must be released. Move the tool in the direction opposite that of feed, approximately 0.1 mm, and return to the original position without side load.

Then, after the deflection has been released and the holder is perpendicular to the workpiece, the grooving operation may start.

Machining Between Walls

One of the most important advantages of the GROOVE-TURN systems is the ability to machine between walls. To achieve the best results, the following sequence is recommended:

Roughing

Plunge to depth of cut. Pull back 0.2 mm radially. Turn longitudinally, retract at the end of the cut by 0.2 mm, simultaneously in radial and axial directions. Plunge again

and repeat same cycle leaving steps of 0.2 mm at the shoulders for the finishing cut. Minimum D.O.C. has to be $a_p \geq R_{x1.2}$ (corner radius).

Finishing

Plunge on the right side, reaching the tangent of the bottom radius. Retract and relieve the tangent point of the radius on the other side. Retract and machine all of the contour, pulling back by compensation value along the bottom (see page 390).

Recommended Criteria for Replacement of the Cutting Edge

The cutting edge should be replaced in time to save costly downtime. The recommended value of wear at replacement is defined as the wear land size. The insert should be replaced when the wear land size is such that the increase in side forces is still small - not causing the insert to break and still maintaining the required workpiece tolerances. Wear is a function of machining time. The cutting edge should normally be replaced after 15 minutes of machining time.

Insert Wear - Tool Life

Wear on the Clearance Face

Wear land on groove turn inserts generally occurs at the corner of the clearance face **VB_n**, on the side near the corner **VB**, on the frontal cutting edge **VB_f** and at the end of the cutting side **VG**. The effective life of the cutting edge ends when any of the wear land values - **VB**, **VB**, **VB_f** or **VG** - exceed the recommended maximum values shown.

The largest wear land is normally measured at the corner of the clearance face **VB_n**. It has the most influence on the dimensions and tolerances of the final workpiece. The wear land shape on **GRIP** inserts differs slightly from that of **ISO** inserts. Although the frontal cutting surface of **GRIP** inserts absorbs more heat land wear, the wear land **VB_f** is generally negligible in turning operations when compared to **VB** and **VB_n**. Wear and may be found only occasionally at the end of the cutting side **VG**.

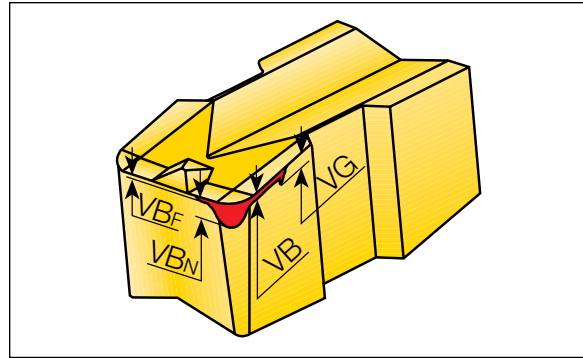

Crater Wear and Tool Life

Crater wear **KB** occurs on the rake face and is mainly affected by feed and cutting speed. Crater wear develops over time toward the frontal cutting edge.

If penetration of the frontal cutting edge occurs, it will immediately affect the quality of the machined surface.

Plastic Deformation

Plastic deformation occurs when the hardness of a cutting edge is decreased due to heat and pressure. The so-called "hot hardness" of the cutting tool material limits the feed and the cutting speed. Plastic deformation will affect the dimensions and tolerances of the finished product. It generally occurs when a small corner radius is used with high cutting speeds and high feeds. Using the proper insert geometry and the correct speed and feed ranges should eliminate the problem.

Maximum Recommended Wear Land Values Relative to Insert Widths

W Insert Width (mm)	Maximum Wear Land (mm)
≤3	0.20
4	0.22
5	0.25
6	0.27
8	0.27
≥10	0.30

Machine Power Calculation

Calculation of Required Machine Power

Use the formulas below or use our internet web tool at: <http://mpwr.iscar.com/machiningpwr/machiningpower.wgx>

Turning

$$P = \frac{K_C \cdot a_p \cdot f \cdot v_C}{h \cdot 61 \cdot 10^3} \text{ [kW]}$$

Grooving/Parting

$$P = \frac{K_C \cdot W \cdot f \cdot v_C}{h \cdot 61 \cdot 10^3} \text{ [kW]}$$

Face Grooving

$$P = \frac{K_C \cdot W \cdot f \cdot v_C}{h \cdot 61 \cdot 10^3} \text{ [kW]}$$

Where:

- K_C**- Specific cutting forces (N/mm²), turning values could be used
- h**- Efficiency (h≈0.8)

20	1000		

For material groups, see page 380

M-type Tools

- M-type tools have no support under the insert's cutting edge
- For an insert with a width smaller than 2.2 mm, there are no standard catalog tools available. There are 2 options as to how to use these narrow inserts:
 - Modify an existing tool and adjust the support under the insert to the required width
 - Use a standard M-type tool without support
- In wider widths, there are also cases where the support under the insert will disturb machining (threading inserts, pulley-V inserts and various specially tailored inserts) and therefore the above explanation should be considered
- These tools also provide the option for customers to use a very wide range of insert widths on the same tool (up to 6.4 mm)
- Machining conditions need to be light due to little support and limited gripping forces**

All JETCUT tools also provide great advantages to standard low-pressure (7-10 Bars) machine tools

The **JETCUT** tools provide a great advantage when standard machine pressure (10-20 bars) is applied and on a wide range of popular materials such as alloy & stainless steel, improving their tool life and in some cases chip control.

The main reasons for the improvement in both high and low pressure are:

- The **JETCUT** coolant is pinpointed exactly to the cutting edge where it is most effective.

- The **JETCUT** coolant is steady and not influenced by the operator's attention or interrupted by the chips.

- In parting-off and deep grooving, external coolant loses its effectiveness as the groove becomes deeper. With **JETCUT** tools and blades, the coolant delivery is not influenced by the groove's depth.

These advantages were reported by many customers and are presented in various test reports.

	PENTAIQGRIP	PENTAIQGRIP JETCUT

JETCUT Tools High Pressure (up to 340 Bar)

The high pressure coolant feature has been in existence for a long time in the metal removal world, taking a bigger role in today's machining.

ISCAR was one of the first cutting tools companies to respond to market needs by designing and producing tools for ultra high and high pressure coolant flow.

High pressure coolant was initially implemented mainly for difficult-to-machine materials such as titanium, Inconel and other heat resistant alloys. Later it was found that tool life, productivity and chip control can be improved when machining stainless and alloyed steel.

JETCUT tools are essential and important in the aviation, aerospace and medical industries.

How does it work?

The stream velocity of the coolant emitted from the pump increases as the coolant holes become smaller. When it emerges out of the tool through the nozzle, the velocity is very high, exerting considerable force on the chips, lowering their temperature and protecting the cutting edge from thermal shock. High temperature alloys produce a very high temperature as they are being cut. By effectively removing the heat, the chips become less ductile and thus easier to break. Shorter chips are easily managed - they do not tangle around the workpiece or machine parts, so there is no need to stop the process frequently. Usually in conventional cooling the chip prevents the coolant from reaching the insert rake face in the cutting zone. The coolant stream of the **JETCUT** tools is directed precisely between the insert rake face and the flowing chip. This results in longer tool life and a much more reliable process.

The coolant channels of the **JETCUT** tools feature outlets very close to the cutting edges, thus gaining the following advantages:

- Shorter machining time – the cutting speed may be increased by up to 200% when machining titanium & heat resistant alloys
- Longer tool life – tool life increases by up to 100% not only on titanium and heat resistant alloys, but also on stainless and alloy steels
- Improved chip control – even on the most ductile and problematic materials, small chips can be obtained
- Very effective cooling down of the cutting edge, which reduces sensitivity to heat fluctuations
- Safer and more stable process

 **JETCUT** tools provide advantageous performance also when conventional pressure is applied.

General Information

Pressure Ranges

Up to 30 Bar – Low pressure (**LP**) may provide some improvement in tool life. Usually will not have an effect on chip control.

30 – 120 Bar – High pressure (**HP**) the most commonly used pressure range used with **JETCUT** tools.

Increase in tool life, increase in cutting speeds, improved chip control.

120 – 400 Bar – Ultra high pressure (**UHP**) requires special tool design in order to take advantage of the extra pressure. Minor increase in tool life compared to **HP** range.

Ultra high pressure coolant is usually implemented for machining titanium and heat resistant alloys when there is a need for very small chips and higher machining rates.

Since 2000, **ISCAR** has provided hundreds of special tools featuring ultra high pressure coolant capability, for various customers and applications.

Pressure vs. Flow

Each **JETCUT** tool is designed to work at a certain flow rate, depending on the pressure. The flow rates are listed in the catalog pages for each tool. The user should verify that the pump can supply the required flow in order to achieve the optimal results. The pump data sheet will usually list the maximum flow rate for each pressure range.

Chips & Pressure

The coolant flow will start to break the chips at a certain pressure, depending on the specific tool and the workpiece material. If the chips are not breaking, the pressure should be increased until chip control is achieved. Above this pressure, as it is increased the chips become smaller and smaller. It is possible to control the size of the chips by modifying the pressure in order to achieve the desired chip size.

High Pressure Coolant with Groove-Turn and Parting Tools

In grooving and parting operations, applying high pressure coolant provides excellent chip breaking results on all materials. On exotic alloys such as Inconel and titanium, it is usually impossible to break the chips with standard external coolant pressure. Applying high coolant pressure provides excellent chip breaking results. On some alloyed and stainless steel, especially when low feeds are applied, high pressure coolant may solve chip breaking problems.

High pressure coolant reduces or even eliminates built-up edge phenomenon, especially when machining stainless steel and high temperature alloys.

In turning operations, applying high pressure coolant is less effective because the jet is directed to the frontal edge.

Assembly and Safety Guidelines When Using the JET HP ISO Turning and Grooving Tools

- Before use, please ensure that:
- The machine door is in a fully closed position
 - The coolant hose is in the correct location and fully tightened with all seals in position
 - A blank plug is inserted into the unused coolant hole
 - All O-rings and washers are in place
 - The coolant hose is tightened securely to the toolholder and tool block, to prevent leakage of coolant

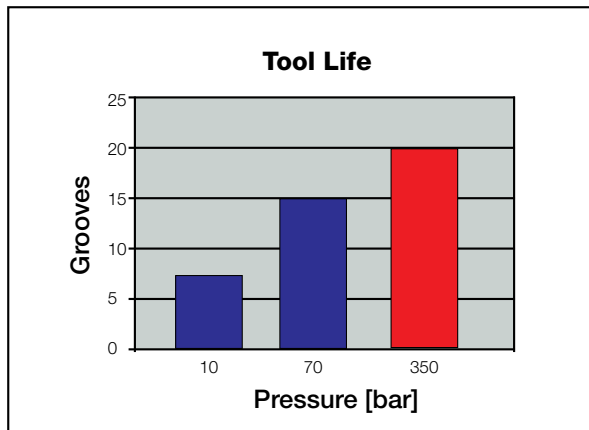

Grooving Test

Material: Titanium (Ti6Al4v)
Operation: Grooving
Tool: GHDL 25-6-JHP
Insert: GIMF 608 IC07
Vc: 50 mm/min
f: 0.15 mm/rev

Pressure [bar]		
10 (External)	70	350

Important

Always pay attention not to exceed the maximum safe working pressure for **GROOVE-TURN tools 340 bar** and **PARTING OFF tools 300 bar**.

• Clamping torque for FSHIUR..-6: 9 Nxm, for FSHDR..-8: 10.5 Nxm

For inserts, see pages: FSP/MA (411)

Insert Clamping Instructions

1. Position the insert in the pocket so the notch (1) on the insert sits on top of the frontal bulge (2) of the pocket

2. Close the clamping screw (3)

Warning

- Do not apply any force and do not hold the insert in place while closing the screw
- There is no contact between the insert and pocket rear wall (4)

Clamping Systems

DO-GRIP

- First choice for parting
- Double-ended insert
- Self clamped for deeper grooving and parting medium to large diameters
- Screw clamped for small diameters
- See also **HELI-GRIP**, page 243

FIRST CHOICE!**Self-clamped****Screw-clamped****TANG-GRIP**

- Very rigid clamping in a tangentially oriented pocket
- Enables machining at very high feed rates and provides excellent straightness and surface finish
- Recommended for parting large diameter parts and for interrupted cuts
- Offers a free, unobstructed chip flow

**TANG-GRIP****MULTI-F-GRIP****MULTI-F-GRIP**
HIGH FEED GRIP HOLDER

- Unique adaptation for Quad /Square type adapters with 4 pockets
- Outstanding stability, vibration free parting system also on big diameters
- Improves inserts life, surface finish and workpiece straightness due to robust design
- Enables reduction of cutting width due to excellent stability, leading to material savings
- **Ø120mm** bar can be cut with only 3 mm insert width
- Guarantees high productivity, especially when using **TAG N...HF** inserts with feed of up to 0.4 mm/rev.
- Economical adapters with 4 pockets
- User friendly, easy to operate
- Saves set up time after pocket replacement - adapter can be positioned with new pocket without set up
- Several adapters can be clamped on one tool block
- The tools and adapters are designed for **JET-CUT** cooling up to 140 Bar

LOGIQ5GRIP
PARTING & GROOVING

- Economical pentagonal adapters with 5 pockets
- No setup time after pocket replacement
- Several adapters can be clamped on one holder
- The tools and adapters are designed for **JET-CUT** cooling up to 340 Bar

**LOGIQ-5-GRIP****CUT-GRIP**

- Single-ended insert
- Self- and screw-clamped options

**Screw-clamped****Self-clamped****PENTACUT**

- 5 cutting edges
- Fast edge indexing
- For shallow grooving and up to 20 mm parting diameter
- **PENTAIQ** for parting up to 40mm bar diameter

**PENTACUT****PENTAIQ**

Main Chipformers

HF-Type

- For high feed machining only!
- Reinforced cutting edge (negative rake)
- Should be used with short extension tools

$$f \approx \frac{W_{insert}}{12} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✗	✗	✗	✓

Recommended feed range as a function of insert width

C-Type

- First choice for parting of bars, hard materials and tough applications.
- A positive rake, single cavity with negative land and shoulders provides extra cutting-edge strength.
- Medium-to-high feed

$$f \approx \frac{W_{insert}}{18} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✗	✓ (IC20 only)	✓ (IC20 only)	✓

Recommended feed range as a function of insert width

Recommendations are for neutral inserts. For R/L inserts, reduce feed by 20-40%.

MF Type

- Parting and Grooving Insert for Soft and Hard Materials, Medium Feed

$$f \approx \frac{W_{insert}}{21} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✓	✗	✓

JT-Type

Based on the J-type chipformer with a T-land reinforced frontal cutting edge.

- Provides a solution for the intermediate range between the strong and negative C-type configuration and the positive edged J-type chipformer.
- Can be used on a wide range of materials.
- Same manner as the J-type, but it can be used at higher feeds due to its reinforced edge.

$$f \approx \frac{W \text{ insert}}{24} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✓	✗	✓

Recommended feed range as a function of insert width

J-Type

- First choice for soft materials, parting tubes, small diameters and thin-walled parts
- Cutting edge with positive rake
- Low-to-medium feed

$$f \approx \frac{W \text{ insert}}{26} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✓	✓	✗

Recommended feed range as a function of insert width

Recommendations are for neutral inserts. For R/L inserts, reduce feed by 20-40%.

Z-Type

- Cutting edge with high positive rake, suitable for parting tubes, thin walled parts and for small diameters
- Suitable for soft materials
- Excellent for cutting bearing steel and stainless steel
- Low-to-medium feeds

$$f \approx \frac{W \text{ insert}}{28} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✓	✓	✗

LF

- Parting and Grooving Insert for Stainless Steel & soft materials
- Miniature Parts
- Low Feeds

$$f \approx \frac{W \text{ insert}}{31} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✓	✗	✗

UA/UT-Type

- A chipformer for use at low feeds
- Recommended for CrNi alloys and low carbon steel, especially in the bearing industry and on similar, ductile materials
- The narrow chipformer design ensures short deformed chips and provides improved performance
- UA and UT are similar chipformers. UT is slightly tighter than the UA chipformer

Recommended feed range as a function of insert width

$$f \approx \frac{W \text{ insert}}{40} \text{ [mm/rev]}$$

P-Type

- Very positive rake inclination and sharp cutting edge
- For soft materials, slim parts and general parting
- Low feeds

$$f \approx \frac{W \text{ insert}}{55} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✓	✗	✓	✗

M-Type

- Similar to C-type, but with modified edge (smaller k-land)
- Improved chip control at medium feed

$$f \approx \frac{W \text{ insert}}{22} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron
✓	✗	✓	✗	✗

A-Type

- Positive rake, sharp edge
- For parting aluminum
- In grade IC20

$$f \approx \frac{W \text{ insert}}{43} \text{ [mm/rev]}$$

Alloy Steel	Austenitic Stainless	High Temp. Alloys	Nonferrous Materials	Cast Iron

• DG..1.0 insert can be mounted into pocket sizes 2 and 3, in which case the pocket width has to be modified • For user guide, see pages 484-492

⁽¹⁾ For CUTDIA 50 mm, use single-ended insert (should be modified by the user)

⁽²⁾ Blades with frontal coolant holes (JETCUT) • For CUTDIA 50 mm, use single-ended insert (should be modified by the user)

⁽³⁾ These blades are suitable for turning, using GRIP 4 inserts • Blades with frontal coolant holes (JETCUT)

⁽⁴⁾ Minimum cutting width

⁽⁵⁾ Maximum cutting width

⁽⁶⁾ For DG. 1... insert, modify holder

⁽⁷⁾ Thickness at the D.O.C. area is 1.0 mm

⁽⁸⁾ Maximum diameter with double-sided inserts.

For inserts, see pages: DGN-LF/LFT (441) • DGN-MF (442) • DGN/DGNC/DGNM-C (438) • DGR/L-C DGRC/LC-C (439) • DGN/DGNM-J/JS/JT (440) • DGR/L-J/JS (441) • DGN-P (444) • DGN-UT/UA (443) • DGN-W (439) • DGN-WP (444) • DGN-Z (442) • DGR-P (444) • DGR-WP (445) • DGR-Z/ZS (443) • GRIP (254) • GRIP (full radius) (255)

Recommended Applications

A very hard submicron substrate with **AlTiCrN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Suitable for parting and grooving of steel, alloy steels, austenitic stainless steel, high temperature alloys and hard steels at medium to high cutting speeds.

A tough submicron substrate with **AlTiCrN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Recommended for general use in parting and grooving operations on large variety of materials as well as steel, alloy steels, austenitic stainless steel, heat resistant alloys at low to medium cutting speeds.

AlTiCrN + TiN PVD coated grade with a special **SUMO TEC** surface treatment on very tough substrate for parting and grooving of steel and stainless steel at low to medium speeds and medium to high feeds. The grade is recommended for interrupted cut and machining at unstable conditions.

A very hard submicron substrate with **AlTiCrN PVD** coating. Suitable for parting and grooving of steel, alloy steels, austenitic stainless steel, high temperature alloys and hard steels at medium to high cutting speeds.

A tough submicron substrate with **AlTiCrN PVD** coating. Recommended for general use in parting and grooving operations on large variety of materials as well as steel, alloy steels, stainless steel, high temperature alloys at low to medium cutting speeds.

A tough submicron substrate with **AlTiCrN + TiN PVD** coating. Recommended for general use in parting and grooving operations on large variety of materials as well as steel, alloy steels, stainless steel, high temperature alloys at low to medium cutting speeds.

AlTiN + TiN PVD coated grade overlays on tough submicron substrate. Recommended for general use in parting and grooving operations on large variety of materials as well as steel, alloy steels, austenitic stainless steel, high temperature alloys at low to medium cutting speeds.

AlTiN + TiN PVD coated grade on very tough substrate for parting and grooving applications at high feeds and low to medium speeds. Suitable for steels and stainless steel. The grade is recommended for interrupted cut and machining at unstable conditions.

MTCVD TiCN and **Al2O3** coated grade with the **SUMO TEC** post coating treatment on very tough substrate for parting and grooving of steel and stainless steel at low to medium cutting speeds under stable and unstable cutting conditions.

Recommended Applications

A cermet grade, used for parting and grooving applications. Recommended for steels and stainless steel at medium to high cutting speeds and low feeds, provides excellent surface finish. Features very good wear resistance and prevents build-up edge.

An uncoated carbide grade. Used for parting and grooving of aluminum and other nonferrous materials at medium to high cutting speeds. Suitable also for titanium and high temperature alloys machining at low cutting speeds.

Parting and Grooving

Selection of Inserts

For a proper match of insert and cutting material to application, the following variables must be taken into consideration:

- Width of cut (width of insert)
- Chipformer style
- Lead angle
- Corner radius
- Carbide grade

Width of Cut (W.O.C.) and Depth of Cut (D.O.C.)

In selecting **W.O.C.**, the main factor to consider is the required **D.O.C.**. The ratio $D.O.C. \approx 8 \times W.O.C.$ is of practical use on alloy steel of average machinability.

For example, applying a 3 mm **W.O.C.** insert **TAG N3C** to cut-off a 48 mm solid bar.

Additional factors which affect **D.O.C.** capacity, relative to the ratio, are:

Holder or Blade Size

To minimize risk of vibration and deflection always choose:

- Blade or toolholder with smallest possible overhang.
- Toolholder with maximum shank dimension.
- Blade height (**B**) dimension which is larger than T_{max} .
- Blade or holder with maximum blade width (largest possible insert seat size).

Example:

- A **W.O.C.** 9.5 mm on blade TGFH 53K-9 ($B=52.6$ mm) extends the ratio of **D.O.C.** to **W.O.C.** by some 50% to 120 mm.

Insert Support

A self-clamped tool is recommended for deep radial machining.

A screw-clamp holder is recommended for axial and small **D.O.C.** machining.

90° Mounting

It is very important that the insert is mounted at 90° to the center line of the workpiece in order to obtain perpendicular surfaces and reduce the risk of vibration.

Workpiece Machinability

The workpiece material affects all of the above factors.

Machine Power and Setup Rigidity

Excessive **W.O.C.** on a light-duty machine will yield vibration and may even stop spindle rotation.

Expensive Workpiece Material

On costly metals the narrowest applicable **W.O.C.** should be used.

Insert Positioning

The Twisted Insert for Cut-Off and Grooving Applications

Machining depths longer than insert length is made possible with the double-ended, twisted insert body. The rear edge is slanted in relation to the frontal edge so it does not come into contact with the machined groove surface when the tool penetrates deeply into the workpiece.

Clamping

Extended, prismatic surfaces guarantee reliable, foolproof clamping even in unstable machining conditions.

Screw-Clamping

Small diameters (**D.O.C.**) with screw-clamped Inserts

Self-Clamping

Large diameters (**D.O.C.**) with self-clamped Inserts

Setup

- The optimal cutting edge height above the center of **TANG-GRIP** tools is up to 0.08 mm + 0.025 mm **W.O.C.**, an advantage when cutting solid bar to center
- Cut-off as close to chuck as possible
- On new applications, first machine in the low or middle range of recommended speeds and feeds

Machining

- Consistency of speed and feed improves performance
- Apply coolant abundantly
- Secure inserts into clean pockets
- Cutting forces on soft workpiece materials may be insufficient to push insert well into pocket. Tap insert into place using a plastic hammer
- On a conventional lathe, lock the carriage to prevent axial motion during cut-off

Usage

- Replace worn inserts promptly, the price of a new one is much less than the risk of damage from continuing with one that is worn out
- Replace blades that have worn or damaged pockets
- Never try to repair damaged pockets
- Chip curling is dependent on the chipformer type and the machining conditions

Chipformer Features

- Narrows the chip
- Eliminates friction with groove walls, prevents chip jam overload
- Permits higher feeds
- Produces unscratched surfaces, eliminating additional facing
- Curls the chips into compact spirals for easy disposal

Selection of Corner Radius

1. A smaller corner radius (r) will reduce the load on the workpiece and produce a smaller size burr
2. At the same time, a large corner radius allows for higher feeds and increased tool life

"S" Sharp Corners

JS/P

- Cutting edge with positive rake and sharp corners
- When a minimum burr (pip) size is essential
- For small feeds
- For small diameters or thin walls
- For **CNCs**, multi-spindle and screw machines

Standard Corner Radius

- Standard medium corner size
- For general applications and materials

"B" Large Corner Radius

- Reinforced corners with stronger cutting edge
- For tough applications and interrupted cuts

Lead Angle

Lead angle (**K**) on cut-off inserts reduces size of burr remaining on workpiece. Increasing the lead angle reduces the burr, but also reduces possible feed rates and tool life. Therefore, neutral inserts are recommended for parts on which a burr is tolerated.

turning direction. When looking toward the chuck from the workpiece, **R.H.**=counterclockwise (**C.C.**) rotation of workpiece and **L.H.**=clockwise (**C**) rotation of workpiece. **C.C.** requires right-hand inserts; **C** requires left-hand inserts.

Insert designations such as **TAG R...** **DGR (R.H.)** and **TAG L...** **DGL (L.H.)** comply with standard terms for

A neutral insert with 0° lead angle increases **D.O.C.** capacity.

Neutral Insert vs. Lead Angle Type

General Rules for Specific Applications

Chamfer and Cut-Off

1. Break in and/or groove
2. Chamfer
3. Cut-off

V-Belt Pulley Grooves

1. Break in
2. Multiple plunge to depth at minor width of groove
- 3-4. Bevel, plunge and turn to minor diameter

Neck Recessing

5. Multiple plunge grooves
6. Necking On neck turning, DOC (a)=up to size of insert corner radius

Cut-Off on Eccentric Tubes

Inserts with 4° lead angle are usually recommended for tubes. However, the combination of eccentric bore and machine resiliency may increase feed-snap on breakthrough and damage the cutting edge. Changing to 6° lead angle inserts will moderate breakthrough. Alternatively, inserts with an extra negative rake-land that strengthens the cutting edge are available on request.

Clamping / Extraction Instructions

The tools are equipped with a user-friendly clamping and extraction device

- ETG 5-7 (for 5-7 mm tools)
- ETG 2 (for 2 mm tools)
- ETG 1.4 (for 1.4 mm tools)
- ETG 8-12 Extractor for 8 to 12.7 mm Inserts

ETG 3-4 (for 3 and 4 mm tools)

Clamping / Extraction Instructions

DO-GRIP

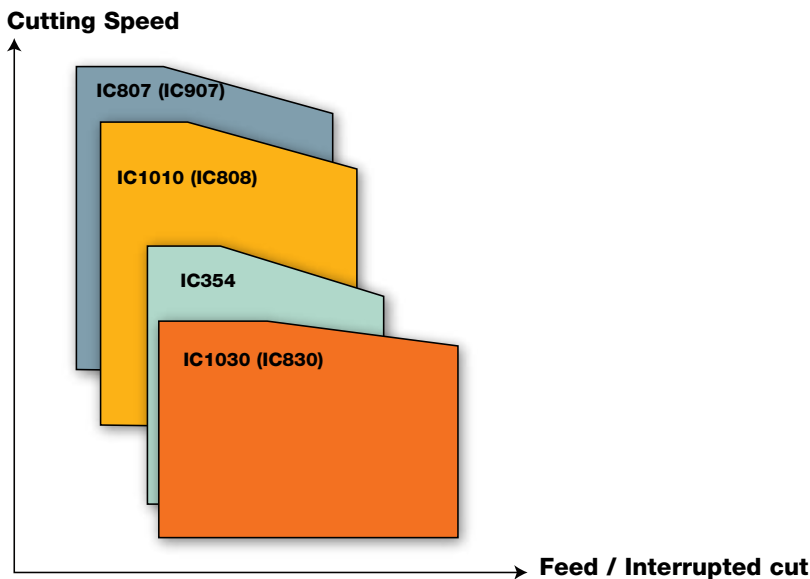

Extractor for DGN/R/L Double-Ended Inserts
DO-GRIP Insert Clamping/Extracting

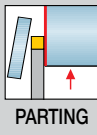

Eccentric Extractor for Insert Indexing
Simple to operate; controlled rotation requires low force; guarantees limited upper jaw movement and secures maximum load on blade.

MODULAR GRIP ADAPTATIONS

Modular Adaptations Systems for Turning Lathes and Multi-Spindle Machine Tools Carrying ISCAR's MODULAR-GRIP Adapters Featuring Directed Internal Coolant Channels

Product Features

- The unique combination of a rigid tool and efficient coolant improves the insert's tool life, surface finish and part straightness
- Designed for high-pressure coolant up to 150 bars and **also very efficient when using low** coolant pressure of 7-10 bars
- No coolant tubes involved, which means no obstruction for chip evacuation
- Each adapter can carry several types of **MODULAR-GRIP** blades
- Excellent tool location repeatability after blade replacement for fast set-up
- Easy and user-friendly mounting

Available adapters for the following specific machines:

- STAR
- DOOSAN
- MAZAK
- MORI SEIKI
- BIGLIA
- MIYANO
- NAKAMURA-Tome
- INDEX ABC
- TRAUB
- OKUMA

MODULAR-GRIP • JETCUT

Toolholder System with Machine-Specific Adaptations for Turning Lathes

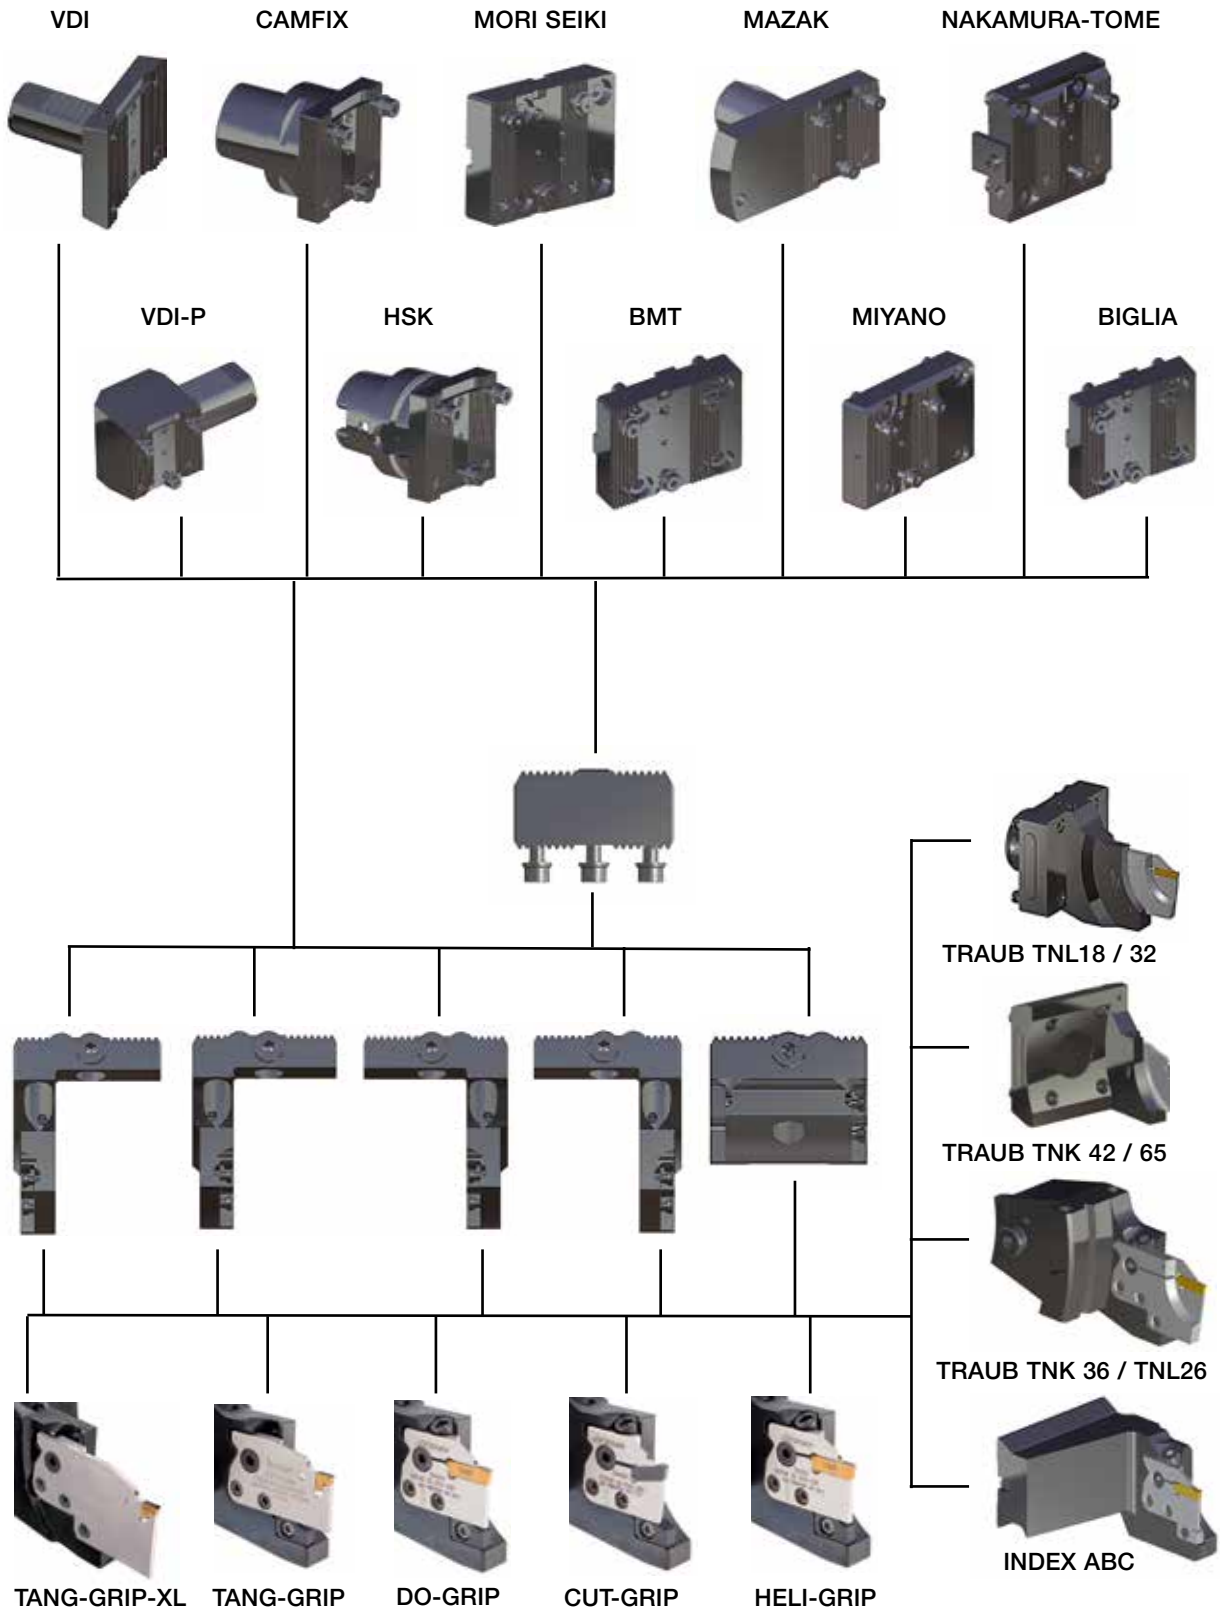

Features and Benefits of Machine-Specific Toolholder Systems

	Flexible Vario System	Adjustable Center Height	Optimized Holder Design	No Coolant Tubes / Hoses
Features:				
Benefits:	<ul style="list-style-type: none"> • Uniform intermediate holders and adapters on different machine adaptations • Low tool stock • Modular design 	<ul style="list-style-type: none"> • Optimal tool life due to adjustable center height • Reliable tool life • Turret malpositions can be balanced 	<ul style="list-style-type: none"> • Long tool life due to reduced bar overhang, less vibrations • Slim design • Low risk of collision • Suitable for any machine-specific clamping interface 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

System Overview

MODULAR-GRIP • JETCUT

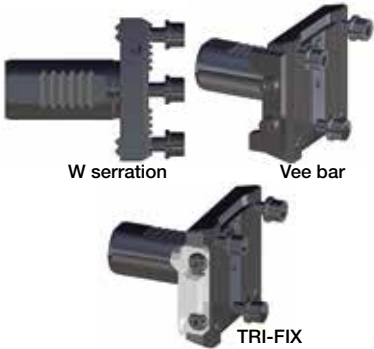

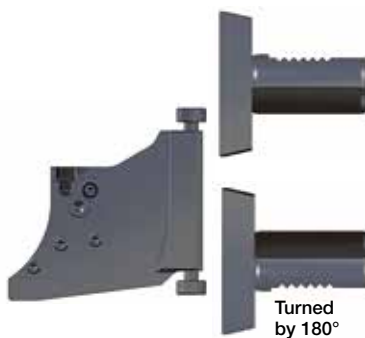

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for Star Turrets with VDI and MODULAR-GRIP-XL Adaptations and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Alignment Systems	VDI Shank Can Be Rotated By 180°
Features:	 <p>VDI20 VDI25</p>	 <p>W serration Vee bar</p> <p>TRI-FIX</p>	 <p>Turned by 180°</p>
Benefits:	<ul style="list-style-type: none"> • DIN69880 (ISO 10889-1) • VDI20 • VDI25 • VDI30 • VDI40 	<ul style="list-style-type: none"> • Extremely stable, torsion resistant and high-end precision 	<ul style="list-style-type: none"> • The serration can be mounted at the top or bottom • Double-serration is not necessary

MODULAR-GRIP • JETCUT

Toolholder System for Disc-Type Turrets with VDI and MODULAR-GRIP-XL Adaptations and Directed Internal Coolant

**Features and Benefits of Machine-Specific Toolholder Systems**

	Adaptation Sizes	Parting Next to Main Spindle or Sub-Spindle	Reliable Processes
Features:	<p>VDI30-P</p> <p>VDI40-P</p>		
Benefits:	<ul style="list-style-type: none"> • DIN69880 (ISO 10889-1) • VDI30-P • VDI40-P 	<ul style="list-style-type: none"> • Low risk of collision due to optimized tool design • Parting next to main spindle or sub-spindle depending on component length 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for **DOOSAN** Machines with BMT and MODULAR-GRIP-XL Adaptations and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Holder Turning Ability 180°	Reliable Processes
Features:	<p>BMT45 BMT55 BMT65</p>		
Benefits:	<ul style="list-style-type: none"> • BMT (Base Mounted Turret) • BMT45 • BMT55 • BMT65 	<ul style="list-style-type: none"> • Tool can be mounted on the left or right of the turret • Extremely flexible due to few elements 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for **MORI SEIKI**
Machines with MODULAR-GRIP-XL
Adaptation and Directed Internal Coolant

MORI SEIKI**Features and Benefits of Machine-Specific Toolholder Systems**

	Adaptation Sizes	Two Pockets for Intermediate Holders	Reliable Processes
Features:	<p>MORI40 MORI60</p> <p>Ø 40 Ø 60</p>	<p>(For MORI60)</p> <p>1. pocket next to (main) spindle 2. pocket next to (sub-) spindle</p>	
Benefits:	<p>Mori Seike turrets for NZ machines</p> <ul style="list-style-type: none"> • MORI40 • For NL machines • MORI60 	<ul style="list-style-type: none"> • Intermediate holder can be mounted on the left or right side of the turret • Modular flexibility due to few elements 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube/hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for **MAZAK** Machines with MODULAR-GRIP-XL Adaptation and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Adaptation Features	Reliable Processes
Features:	<p>MA4016E MA4020E MA4020T MA5020E MA4016T</p>	<p>MA####E MA####T</p>	
Benefits:	<p>For Mazak Quick Turn, Hyper Quardrex and Multiplex machines</p> <ul style="list-style-type: none"> • MA4016E • MA4020E • MA5020E • MA4016T • MA4020T 	<ul style="list-style-type: none"> • Suitable for any common Mazak adaptations 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for Machines with **CAMFIX** MODULAR-GRIP-XL Adaptations and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Parting Next to Main Spindle and Sub-Spindle	Reliable Processes
Features:	<p>C4 C5 C6</p>		
Benefits:	<p>For CAMFIX turrets and for turn-mill centers with a CAMFIX ISO26623-1 milling spindle</p> <ul style="list-style-type: none"> • C4 • C5 • C6 	<ul style="list-style-type: none"> • Low risk of collision due to optimized tool design • Parting next to main spindle or sub-spindle depending on the component length 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder Systems for Turn-Mill Centers with HSK Shank and MODULAR-GRIP-XL Adaptation and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Relief for Automatic Tool Changers	Reliable Processes
Features:	<p>HSK T 40</p> <p>HSK T 63</p>	<p>Relief for tool exchanger</p>	
Benefits:	<p>For HSK T turrets and for turn-mill centers with HSK T milling spindles</p> <ul style="list-style-type: none"> • HSK T 40 • HSK T 63 	<ul style="list-style-type: none"> • Tools can be used on machines with an automatic tool exchanger 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no flexible coolant nozzle)

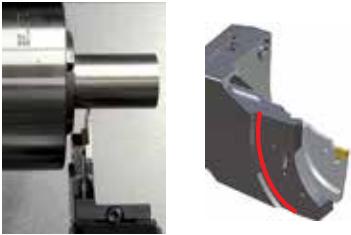

MODULAR-GRIP • JETCUT

Toolholder Systems for **BIGLIA**, **MIYANO**
and **NAKAMURA TOME** with
MODULAR-GRIP-XL Adaptation and
Directed internal Coolant

Toolholder systems for BIGLIA, MIYANO and NAKAMURA TOME

  Holder for BIGLIA turrets <ul style="list-style-type: none"> • BI40 • BI55 	  Holder for MIYANO turrets <ul style="list-style-type: none"> • MI40 • MI45 • MI55 	 Nakamura-Tome  Holder for NAKAMURA-TOME turrets <ul style="list-style-type: none"> • NT55 • NT65
--	--	---

Features and Benefits of Machine-Specific Toolholder Systems

	Optimized Holder Design	Parting Next to Main Spindle and Sub-Spindle	Reliable Processes
Features:			
Benefits:	<ul style="list-style-type: none"> • Long tool life due to small bar overhang and less vibrations • Slim design • Low risk of collision • Suitable for any machine-specific clamping devices 	<ul style="list-style-type: none"> • Low risk of collision due to optimized tool design • Parting next to main spindle or sub-spindle depending on the correspondent length 	<ul style="list-style-type: none"> • Chips do not accumulate in the work space (no coolant tube / hose required) • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

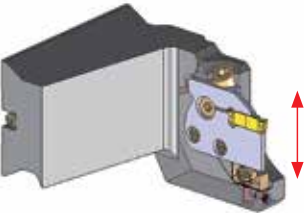

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for INDEX ABC
Machines with MODULAR-GRIP-XL
Adaptation and Directed Internal Coolant

Features and Benefits of Machine-Specific Toolholder Systems

	Adaptation Sizes	Height Adjustment +0.2 mm	Machine Optimized Tool Design
Features:			
Benefits:	<p>For INDEX ABC machines turret 2</p> <ul style="list-style-type: none"> • Prismatic adaptation 	<ul style="list-style-type: none"> • Mismatch of turrets can be adjusted • Extremely long tool life due to exact center height 	<ul style="list-style-type: none"> • Extremely long tool life due to very stable tool design • Reduced vibrations due to reduced bar overhang • Reliable coolant supply due to fixed flow orientation (no adjustable coolant nozzle)

All trademarks and logos are the property of their respective companies

MODULAR-GRIP • JETCUT

Toolholder System for Integral Shank 45
with MODULAR-GRIP-XL Adaptation and
Directed Internal Coolant

**Features and Benefits of Machine-Specific Toolholder Systems**

	TNK 36 / TNL 26	TNL 18 / TNL 32	TNK 42 / TNK 65
Features:			
Benefits:	<p>Dovetail connection for TRAUB TNK36 and TNL26 Machines</p> <ul style="list-style-type: none"> • Tools are suitable for parting and grooving applications • Suitable for any machine-specific clamping device 	<ul style="list-style-type: none"> • Integral shank 45 for Traub TNL18 and TNL32 • Tools are suitable for parting and grooving applications • Suitable for any grooving systems with directed internal coolant 	<ul style="list-style-type: none"> • Low risk of collision due to machine-specific tool design • Tool is suitable for parting and grooving applications • Suitable for any machine-specific clamping device

All trademarks and logos are the property of their respective companies

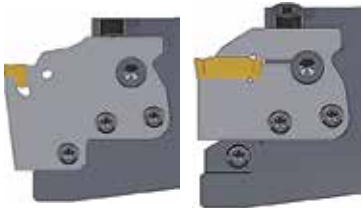

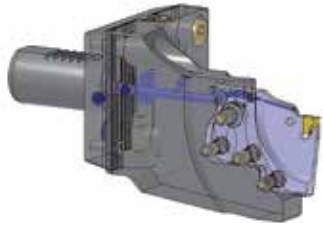

Adapters with internal coolant

MODULAR-GRIP • JETCUT

Features and Benefits of Machine-Specific Toolholder Systems

	Extremely Stable	Coolant Directly to the Cutting Zone	Additional External Diameters
Features:			
Benefits:	<ul style="list-style-type: none"> • Very long tool life as the cutting forces are directly transmitted to the intermediate holder • Very rigid due to additional clamping screw in the MODULAR-GRIP-XL adapters pocket • Less vibrations due to rigid tool design 	<ul style="list-style-type: none"> • Reliable tool life due to fixed flow orientation (no adjustable coolant nozzle) • Chips do not accumulate in the work space (no coolant tube / hose required) • Very efficient due to small distance between coolant exit and cutting zone 	<ul style="list-style-type: none"> • Long tool life due to reduced vibrations by reinforced tool body • Suitable for all popular bar diameters

Features and Benefits of Machine-Specific Toolholder Systems

	MODULAR-GRIP/ MODULAR-GRIP-XL	Vario System	Coolant Connection From the Turret into the Cutting Zone
Features:		 <p>TAGPAD-JHP TAGPAD-XL-JHP HGPAD-JHP DGPAD-JHP CGPAD-JHP</p>	
Benefits:	<ul style="list-style-type: none"> • Very flexible due to compatibility with existing adapter systems • MODULAR-GRIP and MODULAR-GRIP-XL adapters can be mounted • High rigidity using MODULAR-GRIP adapters by additional support 	<ul style="list-style-type: none"> • Very flexible • Suitable for any JHP grooving systems • Direct cooling for grooving and turn-groove operations • A variety of options with a single holder 	<ul style="list-style-type: none"> • Fast set-up, less downtime • Chips do not accumulate in the work space • Easy handling, low risk of error

All trademarks and logos are the property of their respective companies

Tool Design - Overview

Tool Selection

Example:

VDI30MAHDR-LXL-JHP

Machine interface

Turning direction at the main spindle

Position of the adapter pocket

1. Defined Machine Adaptations

Type	Machine Adaptations											
	VDI	VDI with W-serration	VDI with Vee-bar	VDI for disc type turret	BMT	MORI SEIKI	MAZAK	CAMFIX	HSK T	Biglia	Miyano	Nakamura-Tome
Size	VDI20	VDI25W	VDI25V	VDI30-P	BMT45	MORI40	MA4016E	C4	HSK T 40	BI40	MI40	NT45
	VDI25	VDI30W	VDI30V	VDI40-P	BMT55	MORI60	MA4020E	C5	HSK T 63	BI55	MI45	NT55

Small Diameter Face Machining Systems

Tool: HGHR/L see page 547

Insert: GRIP... / HGPL...

CW = 3 mm

CDX = 6 mm

DAXN = 12 mm

Integral shank toolholder which uses double-ended 3 mm inserts. Used for face grooving and face turning of small parts for 12 mm minimum groove diameter.

Tool: HGAER/L... (adapter) see page 551

Tool: HFAER/L... (adapter) see pages 551-552

Insert: HFPR/L...

CW = 3-6 mm

CDX = 32 mm

DAXN = 12 mm

Exchangeable external adapters. Used with HELIFACE and GRIP inserts for deep face machining.

Tool: PCHPR/L see page 571

Insert: PENTA 34F...

CW = 2.39-4 mm

CDX = 5 mm

DAXN = 22 mm

Pentagonal insert for face grooving and recessing up to 5 mm depth of cut at a minimum of 22 mm diameter.

Tool: PICCO R010 see page 541

CW = 1-3 mm

CDX = 6 mm

DAXN = 6 mm

Small solid carbide bars for machining shallow grooves from 6 mm minimum diameter.

Tool: PICCO R015 see page 542

- CW = 2.5-3 mm**
- CDX = 30 mm**
- DAXN = 15 mm**

Small solid carbide bars for machining deep face grooves of up to 30 and 15 mm minimum diameter.

Tool: MIFHR ... see page 544

Insert: MIFR ...

- CW = 2-3 mm**
- CDX = 9 mm**
- DAXN = 10 mm**

MINCUT - A family of internal face grooving and face turning tools for machining small diameters ranging from 10-34 mm. Strong and stable tangential pocket with internal coolant.

Tool: MIFHR ... see page 544

Insert: MIFR ...

- CW = 1.5-3 mm**
- CDX = 5.5 mm**
- DAXN = 8 mm**

MINCUT - A family of internal face grooving and face turning tools for machining small diameters ranging from 8-17 mm. Strong and stable tangential pocket with internal coolant.

Tool: MGCH 09C see page 543

Insert: GFQR...

- CW = 1-2.5 mm**
- CDX = 3 mm**
- DAXN = 12 mm**

A screw-clamped insert on an internal coolant solid carbide bar. Used for machining shallow grooves from 12 mm minimum diameter.

Main Applications

Grooving Next to a Shaft

External Grooving

Internal Grooving

**Medium Diameter
Face Machining Systems**

Tool: HFHR/L... see pages 547-549

Insert: HFPR/L...

CW = 3-6 mm

CDX = 32 mm

DAXN = 25 mm

Integral shank toolholders carrying HELIFACE and GRIP inserts. For deep face grooving and side face turning.

Tool: HFPAD... (adapter) see pages 549-550

Insert: HFPR/L...

CW = 3-6 mm

CDX = 22 mm

DAXN = 25 mm

Slanted, screw-clamped adapter carrying HELIFACE and GRIP inserts. A part of the MODULAR-GRIP system. Very rigid, for tough face operations.

Tool: TNFFH see page 566

Insert: TNF 3-6C...

CW = 3-6 mm

CDX = 32 mm

DAXN = 30 mm

Adapter and blade toolholders carrying TNF 3-6C inserts. For deep face grooving.

Tool: HFFR/L... see page 550

Insert: HFPR/L...

CW = 4-6 mm

CDX = 38 mm

DAXN = 48 mm

Economical, double-ended blades carrying HELIFACE and GRIP inserts. Recommended for deep face grooving and face turning to a maximum depth of 38 mm.

Tool: TNFFA see page 566

Insert: TNF 3-6C...

CW = 3-6 mm

CDX = 32 mm

DAXN = 30 mm

Reinforced blades carrying TNF 3-6C inserts. Recommended for face grooving only. Can machine along a shaft. Excellent chip evacuation.

Tool: PCHPRS/LS see page 571
Insert: PENTA 34F-RS/LS...

- CW = 2.39-4 mm**
- CDX = 5 mm**
- DAXN = 22 mm**

Pentagonal insert for face grooving and recessing next to shoulders up to 5 mm depth of cut at a minimum of 22 mm diameter.

Tool: HFHR/L...-M see page 552
Insert: HFPR/L...

- CW = 3-6 mm**
- CDX = 5 mm**
- DAXN = 20 mm**

Integral toolholders carrying HELIFACE and GRIP inserts. For machining up to 5 mm depth of cut. 3-6 mm wide inserts can be mounted in the same pocket.

Tool: HFAIR/L...& HGAIR/L (adapter) see pages 554-555
Insert: HFPR/L...

- CW = 3-6 mm**
- CDX = 12 mm**
- DAXN = 32 mm**

Exchangeable, internal coolant adapters carrying HELIFACE and GRIP inserts. Recommended for deep internal face machining.

Tool: HFIR/L...-MC see page 556
Insert: HFPR/L...

- CW = 3-6 mm**
- CDX = 5 mm**
- DAXN = 20 mm**

Boring bars for shallow face machining of up to 5 mm depth carrying HELIFACE and GRIP inserts. Internal coolant. 3-6 mm width inserts can be mounted on the same pocket.

Main Applications

Grooving Next to a Shaft

External Grooving

Internal Grooving

**Large Diameter
Face Machining Systems**

Tool: CGFG 51-..R/L-P8
see page 563
Insert: GIMY 8...
CW = 8 mm
CDX = 120 mm
DAXN = 180 mm

Blades carrying 8 mm single-ended CUT-GRIP inserts. Can machine up to 120 mm depth next to a shaft. Used for large diameters.

Tool: GHFG ..R/L-8 see page 561
Insert: GDMY 8..
CW = 8 mm
CDX = 25 mm
DAXN = 50 mm

Integral toolholders carrying 8 mm CUT-GRIP inserts. For heavy machining of medium and large parts. Can machine next to a shaft of up to 25 mm depth.

Tool: GAFG ..R/L-8 (adapter)
see page 562
Insert: GDMM 8CC
CW = 8 mm
CDX = 25 mm
DAXN = 80 mm

Exchangeable adapters carrying 8 mm CUT-GRIP inserts. Can machine up to 25 mm depth next to a shaft. For heavy machining of medium and large parts.

Main Applications

Grooving Next to a Shaft

The Twisted Insert
for Face Machining

The double-ended, twisted insert body makes it possible to machine deeper than the inserts' length. A unique chipformer for controlled chip flow in axial and radial directions. The rear angle is slanted in relation to the frontal edge so it does not come into contact with the machined groove surface as the tool penetrates deeply into the workpiece.

Recommended Applications

TiCN PVD coated grade on tough substrate used for general facing applications on wide range of carbon and alloy steels at medium speeds.

A hard submicron substrate with **AlTiN + TiAlN PVD** coating and a special **SUMO TEC** surface treatment. First choice for machining of high temperature alloys. Suitable also for Titanium alloys, at medium to relatively high cutting speeds.

A hard submicron substrate with **TiAlN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Suitable for machining high temperature alloys, austenitic stainless steel and hard steels at medium cutting speeds.

A tough submicron substrate with **TiAlN + TiN PVD** coating and a special **SUMO TEC** surface treatment. Recommended for face machining on large variety of materials as well as high temperature alloys, stainless steel and hard steels at low to medium cutting speeds.

TiAlN + TiN PVD coated grade with a special **SUMO TEC** surface treatment on very tough substrate for machining of steel and stainless steel at low to medium speeds and medium to high feeds. The grade is recommended for interrupted cut and machining at unstable conditions.

A tough submicron substrate with **TiAlN PVD** coating. Recommended for general use in facing operations on large variety of materials as steels, high temperature alloys, stainless steel and hard steels at low to medium cutting speeds.

A **TiCN + Al₂O₃** multilayer, **CVD** coated grade with a special **SUMO TEC** surface treatment. Used for machining grey and nodular cast iron at medium to high cutting speeds. Can be used for interrupted cuts and heavy machining.

A tough substrate with a cobalt enriched layer combined with **MTCVD TiCN** and a thick alpha **Al₂O₃ CVD** coating with a special **SUMO TEC** surface treatment. Recommended for general use machining of steels and martensitic stainless steel in a wide range of conditions, features high toughness and wear resistance.

A **Tic + Al₂O₃** multilayer **CVD** coated grade. Used for machining grey and nodular cast iron at medium to high cutting speeds. Can be used for interrupted cuts and heavy machining.

Tic + Al₂O₃ multilayer **CVD** coated grade. Used for machining grey and nodular cast iron at medium to high cutting speeds.

A hard substrate with a cobalt enriched layer, **MTCVD TiCN** and a thick **Al₂O₃ CVD** coating. Recommended for high speed machining of steels at stable conditions.

Recommended Applications

An uncoated submicron carbide grade, used for steels, stainless steel and high temperature alloys at low cutting speeds.

An uncoated carbide grade. Used for machining of Aluminum and other nonferrous materials at medium to high cutting speeds. Suitable also for high temperature and Titanium alloys machining at low cutting speeds.

Clamping the Insert

Clamping an insert correctly into the holder is necessary for stable machining.

- Be sure that the seat is clean of dirt and swarf.
- At the first stage of clamping, ease the insert gently into place. Make sure that the prismatic surfaces match.

• Screw Clamping Torque

Insert Width	Nxm
3	4-5
4	5-6
5	6-7
6/8	7-9
CGFG 51...	4-6

The unique chipformer is designed for deep grooving and face turning both toward and away from center, with excellent chip formation.

HELIFACE HFPR/L & HGPL Type

For general use in turning & grooving on all types of materials. Use for deep grooving in low-to-medium feeds 0.04-0.15 mm/rev. Min grooving dia. 12 mm.

HELI-GRIP GRIP...Y Type

The "all in one" insert for parting, external grooving and turning, internal grooving and turning, face grooving and turning.

DO-GRIP DGN...C Type

For grooving operations only. Strong cutting edge for hard materials and tough applications in feeds 0.1-0.2 mm/rev.

DO-GRIP DGN...J Type

For grooving operations only. Positive rake, for soft materials in low-to-medium feeds 0.05-0.15 mm/rev.

Face Machining Guide

Tool Selection - Follow these recommendations to choose the right tool for high performance

Choose the widest possible insert and tool, according to the cutting width and geometry to be machined.

Choose the shortest tool blade overhang, according to the maximum depth required.

Choose the tool range with the largest diameter, depending on the initial grooving diameter required in the application.

Remark: On integral shank tools the given range refers to the holder capacity.

Tool Adjustment - Prior to machining, check and adjust the following tool positions.

Check the cutting edge height at center line, machine in light turning down to center and check for burr.

Check parallelism of the cutting edge and machined surface. Correct position can guarantee good surface quality when face turning in both directions.

Face Machining Guide

Recommended machining sequence in roughing operation using multifunction HELIFACE tools

1 Groove at the initial diameter up to the depth of cut selected for next step in face turning.

2 Continue with face turning away from center.

3 After rapid positioning back into initial groove, continue with face turning to center.

Note: When face grooving, reduce the speed by 40% in relation to that used in face turning.

Optimizing the Machining Sequence

Recommended machining sequence using multifunction tools

1 Groove at the initial diameter to the final depth of groove and continue face turning away from center to the tangential point on the radius.

2 Finish major diameter toward the bottom and generate the radius.

3 Position the tool in rapid movement in the initial groove, continue face turning to center, without touching the machined roughing steps on the wall.

4 Finish boring the minor diameter to the bottom, up to final depth.

Note: When face grooving, reduce the speed by 40% in relation to that used in face turning.

The Multifunction Advantage

1

The **HELIFACE** internal boring bar **HFIR/L MC** type with internal coolant can replace the three different **ISO** tools and shorten machining time by 20%.

2

A single multifunction tool machines the whole part: grooving, face turning and chamfering, replacing three **ISO** tools and reducing machining time by 40%.

3

A single integral **HELIFACE** tool **HFHPL-M** replaces three **ISO** tools and reduces machining time by 50%.

The Multifunction Advantage

This workpiece was machined using three different conventional tools.

1

An indexable drill for bottom drilling.

2

A standard internal boring bar with trigon insert for roughing and finishing.

3

A standard internal boring bar with trigon insert for bottom machining. This operation requires a small diameter shank and long overhang.

The **HELIFACE** Solution

The **HELIFACE** internal boring bar **HFIR/L MC** type with internal coolant can replace the three different **ISO** tools and shorten machining time by 20%.

The Multifunction Advantage

This part was machined using three different conventional tools.

1 A standard ISO tool for external turning.

2 A boring bar for face turning and chamfering.

3 A face grooving tool for grooving, recessing and chamfering.

The **HELIFACE** Solution
A single integral **HELIFACE** tool **HFHPL-M** replaces three ISO tools and reduces machining time by 50%.

Insert Replacement

EDG 33B

Eccentric Extractor

Simple to operate; controlled rotation requires low force; guarantees limited upper jaw movement and secures maximum load on blade.
Two extractor pins are placed in the two holes in the holder blades.

Indexing

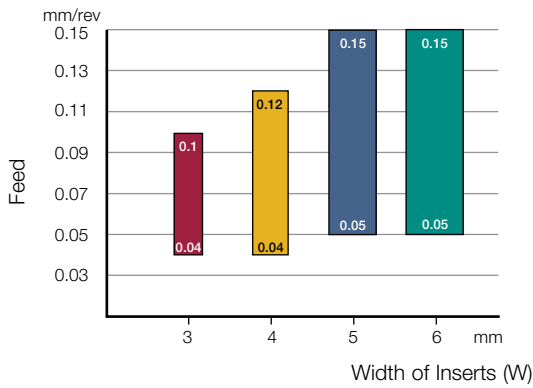

- Place the **EDG** extractor in the holes
1. Hold the extractor against the tool.
 2. Rotate the eccentric handle to lift the upper jaw.

1

2

Machining Conditions in Face Grooving

Recommended feed range for grooving with HFPR/L inserts in various widths.

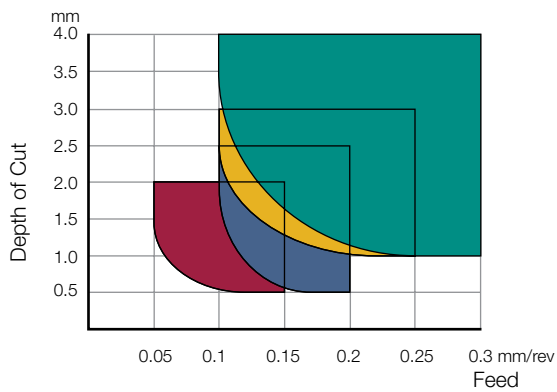

Chip shapes for grooving, according to width of insert and feed, using HFHR/L toolholders.

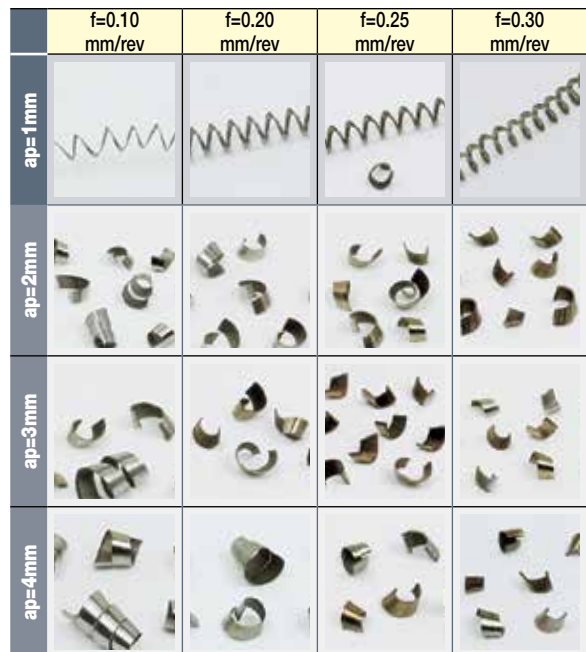

Note: In face grooving, narrowed and deformed chips are preferred. Curled and long chips can flow out more easily from deep grooves.

Recommended depth of cut and feed range for face turning using HFHR/L toolholders carrying HFPR/L inserts in various widths.

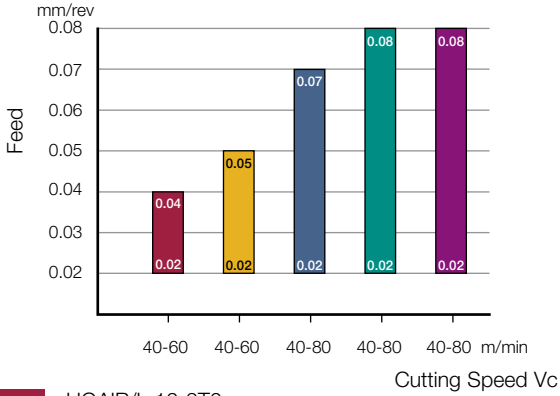

Chip shapes in face turning with inserts HFPR/L-5004 & HFPR/L 6004 and HFHR/L toolholders.

Note: In roughing, increase feed at small depth of cut and reduce feed at large depth of cut.

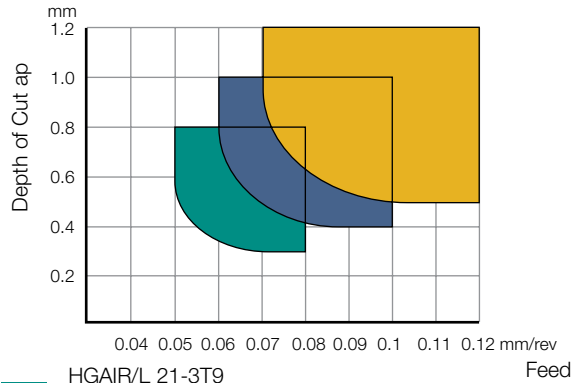

Face Grooving and Turning Recommendations Using Adapters for 3 mm Inserts

Recommended feed range for grooving with Grip 3... and **HGPL 3...** inserts and **HGAIR/L** and **HGAER/L** adapters. Feed range changes according to adapter type.

- HGAIR/L 12-3T6
- HGAER/L 12-3T6
- HGAIR/L 14-3T7
- HGAER/L 14-3T7
- HGAIR/L 17-3T8
- HGAER/L 17-3T8
- HGAIR/L 21-3T9
- HGAER/L 21-3T9
- HGAIR/L 25-3T9

Recommended depth of cut and feed range for turning with **HGPL 3...** inserts with **HGAIR/L** and **HGAER/L** adapters. Feed range changes according to adapter type.

- HGAIR/L 21-3T9
- HGAER/L 21-3T9
- HGAIR/L 25-3T9
- HGAER/L 14-3T7
- HGAER/L 14-3T7
- HGAIR/L 17-3T8
- HGAER/L 17-3T8
- HGAIR/L 12-3T6
- HGAER/L 12-3T6

Note: In roughing, increase feed at small depth of cut, and reduce feed at large depth of cut.

Face Grooving and Turning Recommendations Using Adapters for 4-6 mm Inserts

Recommended feed range in grooving with **HFPR/L** inserts and **HFAIR/L** & **HFAER/L** adapters.

Recommended depth of cut and feed range in turning with **HFPR/L** inserts and **HFAIR/L** & **HFAER/L** adapters. Feed range changes according to adapter type.

- HFAIR/L- ...4
- HFAER/L- ...4
- HFAIR/L- ...5
- HFAER/L- ...5
- HFAIR/L- ...6
- HFAER/L- ...6

Note: In roughing, reduce feed when depth of cut is increased, and increase feed at small depth of cut.

Specially Tailored

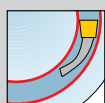

Semi-Standard Face Grooving and Undercutting Tools

The following drawings show typical semi-standard face grooving tools that can be ordered. Please specify all relevant dimensions and attach workpiece material geometric details.

JETCUT Assembly

SELF-GRIP

- C** Insert GF□
- D** Blade SGFH□K-□
- E** Cap **SGC 340** supplied with blade; to be used with Option 1 only.
- F** Tool block **SGTBU□C-□**
- G** Elbow-style connector unit supplied with each tool block; **SGCU-344**
- H** 3/16" copper Tube 343 (length 250 mm)
- I** Choice of connector sets:
CGM-343 (G 1/8 external thread)
CGF-343 (G 1/8 internal thread)
CF-343 (NPT 1/8 internal thread)
- J** Standard current tool block **SGTBN, SGTBU, SGTBF**
- K** Coolant connection unit; **SGCU-341**
- M** Integral shank holder **SGTFR/L□K-□**

Option 1:
Coolant supplied through the tool block.

Option 2:
Coolant supplied directly to the blade.

Option 3:
Coolant supplied directly to the integral shank tool.

DO-GRIP
500 STRAIGHT LINE

The coolant supply tube can be attached directly to the **DGTR...C** integral tool, **DGFH-C** blades used on the regular blocks or to the **SGTBU-C** blocks which have coolant passages and connecting ports.

The Right Connection for Your Application

Option 1:
Coolant supplied directly to the blade.

- Connectors:
CGM 343 (G1/8 external thread)
CGF 343 (G1/8 internal thread)
CF 343 (NPT1/8 internal thread)

Option 2:
Coolant supplied through the tool block.

- TUBE 343**
 3/16" copper tube (length 250 mm)
 (G1/8 external thread) (G1/8 internal thread) (NPT1/8 external thread) (NPT1/8 internal thread)

Option 3:
Coolant supplied directly to the tool.

- Connectors:
CGM 343 (G1/8 external thread)
CGF 343 (G1/8 internal thread)
CF 343 (NPT1/8 internal thread)

TABLE OF CONTENTS

CAMFIX (ISO 26623-1)	590
HSK-T (ISO 12164-3 T Type and ICTM Standard)	596
IM (ISO 26622-1 and Mazak XMZ Standard).....	598

ISCAR offers a wide range of tools for three types of Quick-Change systems:

1. **CAMFIX (ISO 26623-1)**
2. **HSK-T (ISO 12164-3 T Type and ICTM Standards)**
3. **IM (ISO 26622-1 and Mazak XMZ Standards)**

CAMFIX (ISO 266231)

Quick Change tools are expensive compared to standard shank tools. ISCAR offers economical solutions by using adapters, blades or regular tools and boring bars on the Quick Change adaptations.

HSK-T (ISO 1264-3 T Type and ICTM Standard)

CAMFIX - ISO 26623-1 Standard Quick Change Shanks

Features

- **Symmetrical design:** Due to the symmetrical design, the torque load is distributed on the polygon, providing a self-centering effect.
- **Rigidity:** The CAMFIX clamping mechanism is extremely rigid against bending forces.
- **Accuracy:** The taper and face contact ensure high repeatability within 2 microns when operated with an automatic tool changer.
