

## Ansell's Ambition for 2040 is ZERO

Ansell is striving to transform as a company and build a more sustainable future. Ansell is committed to achieving Net Zero by 2040 for operations (Scope 1 & 2), supported by a mid-term science-based emissions reduction target of 42% by 2030.\*

**Ansell's decarbonization strategy will focus on three key areas:**

**Transitioning from fossil fuels to renewable energies**

**Innovation in manufacturing processes, products, and circularity**

**Collaboration through value chain partnerships and policy advocacy**

For some time, Ansell has been laying the groundwork for change, and while these targets seem far-reaching, the Ansell sustainability strategy is designed to drastically reduce our environmental impact in the near- to mid-term, for the benefit of both People and Planet.

1

### Renewable Energy

Ansell focused on energy initiatives across biomass, solar PV, and renewable grid electricity, which has resulted in the achievement of 45% renewables in our energy mix today.

2

### Zero Waste to Landfill

By the end of 2023, Ansell's global plants and facilities will send zero waste to landfill. Our Packaging Pledge will ensure the **use of 100% recyclable, reusable or compostable** packaging materials by 2026.

### Water Stewardship

Ansell is renewing water stewardship strategies and committing to a **35% reduction** in absolute water withdrawals across our plants by 2025.\*

3

### Collaboration

Ansell has also committed to engage with the *International Union for Conservation of Nature* to assess our impacts and dependencies on biodiversity to establish mitigation actions.

4

Studies are underway to understand the products' impact, including end-of-life impacts, on the planet by working alongside industry and research community stakeholders (Scope 3). More information will be shared as it becomes available.
